

Cinerific Android App Work Log - September 28, 2026 (U.S. EST)

Compiled summary for Monday, September 28, 2026 (U.S. Eastern Time) - focus: restoring exact Welcome-screen avatar fidelity inside Create My Account, rebuilding the carousel so only character artwork slides while the bubble remains fixed, correcting Martin's hair and the shared lower outline treatment, tightening responsive authentication spacing, adding a Birthday label, importing the locally licensed Broadway typeface for a live username display, moving the portrait avatar stack above Username, preserving fixed headers and bottom navigation while content scrolls, and refining Welcome/Create transition motion so avatar chevrons fade with the form and travel horizontally toward their corresponding screen edges. Generated after reviewing every prior Cinerific PDF worklog, the September 27 baseline, all three September 28 commits, the refreshed project snapshot, Gradle output, and runtime checks on the connected Samsung phone and Standard tablet emulator.

Generated in continuity with the established Cinerific worklog cadence from July 12 through September 27: compact opening summary, source-material review, baseline state, goals, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. No September 28 PDF existed before this pass, so this artifact uses the first-log-of-the-day filename without a part suffix. Eastern Time was verified live as Monday, September 28, 2026 in EDT, UTC-04:00. The title retains the historical U.S. EST label while the body records the seasonally accurate offset. This artifact records main through HEAD 3b11b22, Refined portrait authentication layouts and avatar transitions, plus the mechanically refreshed project snapshot produced during this documentation pass.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, July 29, August 1, August 3, August 4, August 5, September 19, September 21, September 21 Part 2, September 23, September 24, September 26, and September 27.
- Converted and indexed the complete 27-PDF Cinerific corpus with pdftotext, compared section cadence and daily scope, and reviewed its progression from intro animation and Figma assets through authentication, responsive catalog, playback, navigation, detail screens, device QA, and the September 27 portrait baseline.
- Used the legacy Alla Vostra PDF under .github only as historical origin context; the Cinerific-named root artifacts controlled this report's naming, technical voice, section order, density, and length.
- Ran pdftinfo and pdffonts across the latest artifact and confirmed the established four-page U.S. Letter geometry, Helvetica typography, PDF 1.4 compatibility, OpenAI Codex metadata, extractable text, and right-aligned page footers.
- Ran read_project.sh and reviewed cinerific_PROJECT_SNAPSHOT.txt, current Git status, commit messages, file statistics, and the complete delta from worklog commit dd39b35 through HEAD 3b11b22.
- Reviewed September 28 implementation in CinerificIntroView.kt and the added Broadway font resource, together with phone/tablet screenshots and build, install, launch, scroll, keyboard, transition, and rotation checks.

Baseline Status Before September 28 Work

- The September 27 baseline had established high-resolution Welcome avatars, portrait-first Create Account, Sign In, and recovery layouts, continuous sign-out loading, and refined phone detail presentation.
- Create My Account still rendered avatar components differently from Welcome on some layouts, most visibly on the tablet emulator. The bubble could move with carousel content, Martin's right hair edge was incomplete, and the reconstructed lower outline could appear gray, clipped at its corners, jagged, or bled into body fills.
- Portrait authentication spacing remained uneven after the new vertical composition. Logo-to-heading, heading-to-content, and field gaps did not yet share one deliberate rhythm, and the birth-date controls lacked a section label.
- The Create Account avatar label remained a static placeholder rather than reflecting the username being entered, and the portrait avatar stack still followed the earlier field order.
- Scrollable authentication content could move its screen heading, and the fixed bottom return region was comparatively shallow with a small chevron.

Main Goals for September 28

- Make the Create Account avatars visually identical to their Welcome equivalents across phone, tablet, portrait, and landscape without changing the accepted Welcome artwork.
- Keep the bubble perfectly fixed during avatar selection while preserving smooth character-only horizontal motion and artifact-free outlines.
- Give portrait authentication a consistent spacing system, clear Birthday grouping, sticky headings, reliable scrolling, and stronger fixed-bottom navigation.
- Render the typed username live in Broadway above the selected avatar and integrate that stack naturally into the portrait form order.

Cinerific Android App Work Log - September 28, 2026 (U.S. EST)

Work Completed - Avatar Fidelity and Layer Reconstruction

- Matched Create My Account avatar rendering back to the accepted Welcome-screen source bitmaps for settled states, removing tablet-only and orientation-dependent visual drift.
- Restored the intended carousel model in which character artwork alone slides horizontally while the circular bubble shell remains perfectly fixed.
- Separated source avatars into reusable character, bubble, and lower-outline layers for motion, while returning to the complete original bitmap at the settled endpoints so facial, hair, body, ring, and shadow details remain intact.
- Recovered Martin's missing right-side hair fill and stroke by preserving the complete source silhouette rather than relying on an over-tight moving mask.
- Normalized the lower character outline to the same blackish channel used by the rest of each character, including the tiny far-left and far-right corner slivers reported on every avatar.
- Reduced the lower-stroke reconstruction depth and widened its controlled side coverage, eliminating gray remnants without repainting character bodies or producing the earlier uneven, jagged edge.
- Introduced short eased endpoint blends between complete and separated avatar layers. This kept the fixed-bubble shadow smooth during a swipe while avoiding inner-ring, pointed-hair, and body-bottom artifacts.
- Derived the motion layers at runtime from the existing high-resolution source bitmaps instead of adding alternate avatar exports, keeping one authoritative artwork set for Welcome and account creation.
- Clipped moving character pixels to the bubble's inner circular region while drawing the shell outside that clip, preventing horizontal motion from leaking across the ring or shadow.
- Used the established blackish stroke channel for repaired lower-edge pixels and constrained replacement to the lowest silhouette region, which preserved green, orange, and other body fills.
- Kept complete endpoint frames visible before separated motion begins and after it settles, so the carousel returns precisely to the same antialiased source image rather than a close reconstruction.
- Retained cyclic previous/next navigation, touch dragging, commit thresholds, selected-index state, and the established avatar geometry on every supported device class.

Work Completed - Authentication Spacing and Birthday Structure

- Restored tablet-emulator orientation responsiveness during QA and kept accelerometer rotation enabled after portrait and landscape checks.
- Halved the vertical gap between form fields for portrait phones and tablets only, leaving all landscape spacing unchanged.
- Rebuilt title placement around measured text-path bounds so Create My Account, Sign In, and Forgot Password share the same optical relationship to their first content element.
- Matched logo-to-header spacing across the three Welcome-related authentication screens, then applied the requested doubled spacing above and below each header for a balanced separation from branding and content.
- Moved the intentional larger Create Account section break from the password area to after Username, then retained the requested additional separation after Email Address.
- Added a centered Birthday heading above the Mon, Day, and Year dropdowns with a dedicated top gap, label height, and label-to-control spacing.
- Updated form height calculations, dropdown offsets, option bounds, clipping, pointer mapping, and maximum scroll extents so the revised sections remain reachable and interactive.
- Kept all spacing changes behind portrait-layout checks so tablet and phone landscape forms retain their prior wide composition, field rhythm, and interaction mapping.
- Preserved the existing membership selector contents, date-option scrolling, floating-label behavior, password masking, and focus dimming while moving only the requested structural gaps.

Work Completed - Broadway Username Presentation

- Located the user's local Broadway font under the Prahlin fonts directory, imported the licensed TTF into app/src/main/res/font/broadway.ttf, and loaded it through Android resources.
- Replaced the static Avatar label with the username entered in the Create My Account Username field, updating live as text changes.
- Added centered Broadway fill-and-stroke rendering with controlled letter spacing, shadow depth, and width-aware text fitting so long names remain aligned inside the available column.
- Kept the username presentation empty until text exists, avoiding placeholder duplication while preserving the native editable Username field below.
- Rendered the Broadway wordmark from actual text rather than captured glyph images, allowing arbitrary upper- and lowercase usernames to remain responsive and consistently aligned.
- Validated the bundled font and interactive output on both the USB Galaxy and tablet emulator rather than depending on a host-installed font at runtime.

Cinerific Android App Work Log - September 28, 2026 (U.S. EST)

Work Completed - Portrait Create Account Reordering

- Moved the Broadway username and complete avatar-selection stack directly below the Create My Account heading and above the Username field in portrait modes only.
- Kept the established landscape three-column form intact, including its original avatar-column relationship and field distribution.
- Recalculated the portrait Username, Password, Confirm Password, Email, membership, Birthday, and date-row offsets around the new avatar-first order.
- Extended content-bottom calculations to include the final date controls as well as the avatar stack, ensuring the longer reordered form can scroll fully above the sticky bottom region.

Work Completed - Welcome/Create Transition Motion

- Raised the moving selected avatar to the highest transition drawing layer so it travels cleanly between its Welcome and Create Account positions.
- Moved the remaining Welcome avatar-related assets vertically beneath that selected avatar rather than fading the entire group, preserving the requested sense of physical continuity.
- Kept the selected avatar's original complete bitmap during the screen transition, preventing the bubble, drop shadow, hair tips, and lower body outline from changing appearance between screens.
- Mapped the selected Welcome avatar's source bounds into the portrait Create Account destination bounds and interpolated that one complete asset above the vertically departing accessory layer.
- Prevented the ordinary Welcome avatar stack from drawing a duplicate selected avatar during the specialized Create transition, avoiding overlap and mismatched opacity.
- Restored character-only horizontal carousel swiping after the screen-transition work and prevented the whole Create Account bubble from joining the swipe motion.
- Matched the avatar chevrons to the form text fade curve during Welcome/Create transitions so they no longer remained fully opaque until teardown.
- Separated transition-only chevron geometry from normal avatar controls: the left and right chevrons now enter from and exit toward the screen edges they point to while holding a stable vertical center.
- Interpolated each chevron from just beyond its corresponding viewport edge to its settled avatar-relative center, using the same eased progress already driving the form transition.
- Left chevron positions and behavior unchanged during settled Create Account use and ordinary avatar swipes.

Work Completed - Sticky Headers and Bottom Navigation

- Kept the Create My Account heading inside the fixed portrait top region while only avatar and form content scroll beneath it.
- Extended the same sticky-header principle to Sign In and Forgot Password, decoupling their headings from content scroll and keyboard-focus movement.
- Derived the portrait content viewport top from each active heading's measured baseline and descent, then clipped scrolling content below that boundary to prevent overlap.
- Kept title drawing in a separate clipped top pass while fields, explanatory copy, selectors, and active controls render inside the shared scrolling pass.
- Anchored Sign In and Forgot Password headings independently of keyboard focus offsets, so focusing Password or Email no longer drags the screen name with the form.
- Doubled the portrait sticky-bottom banner's vertical reserve and doubled the return chevron's overall dimensions, stroke, and touch target while preserving landscape sizing.
- Adjusted the chevron row placement proportionally within the larger banner and expanded scroll limits so Birthday controls and recovery actions remain accessible above it.

Work Completed - Device Deployment and Runtime QA

- Built, installed, force-stopped, and relaunched the same debug APK repeatedly on Samsung SM-G990U serial R5CRC33MGNZ and emulator-5554.
- Checked Create Account at initial and maximum scroll positions on both targets, confirming the sticky heading, enlarged bottom banner, date dropdown access, and transformed touch regions.
- Focused Sign In fields with the software keyboard visible and verified that the heading stayed fixed while field content moved within its clipped viewport.
- Scrolled Forgot Password from explanatory copy through selector, email, submit, and help content while confirming the title remained stationary.
- Captured Welcome/Create transition frames on the Galaxy and verified that chevrons faded continuously and traveled horizontally only during the screen transition.
- Confirmed normal Create Account avatar swipes still leave the chevrons at their settled controls and move only character layers horizontally inside the fixed bubble.
- Confirmed the tablet emulator's accelerometer_rotation setting returned 1 after orientation checks.

Cinerific Android App Work Log - September 28, 2026 (U.S. EST)

Validation and Checks Performed

- Ran `./gradlew :app:assembleDebug` throughout the avatar, form-spacing, font, sticky-header, bottom-banner, and transition passes. Final builds completed successfully without Kotlin compilation or Android resource errors.
- Ran `git diff --check` during implementation and before documentation without whitespace errors.
- Confirmed successful streamed APK installs and launcher starts on both R5CRC33MGNZ and emulator-5554 after the final accepted source pass.
- Verified commits 2b1a62c, 34f4926, and 3b11b22 and reviewed their complete messages, file lists, timestamps, and source statistics.
- Measured the implementation delta from September 27 worklog commit dd39b35 through HEAD as 926 Kotlin insertions and 256 Kotlin deletions in `CinerificIntroView.kt`, plus the new 157,052-byte Broadway TTF and the mechanically refreshed snapshot.
- Verified U.S. Eastern Time live as Monday, September 28, 2026 in EDT with UTC offset -04:00 before choosing the filename and report date.
- Checked this output with `pdftinfo`, `pdffonts`, `pdftotext`, page rendering, and visual inspection for four-page count, U.S. Letter geometry, wrapping, metadata, footer placement, and readable extracted text.

Files Touched During September 28

- `app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt`: added exact settled avatar reuse, separated carousel layers, outline repair, endpoint blending, portrait form reordering and spacing, Birthday labeling, Broadway username drawing, sticky auth headers, viewport clipping, enlarged bottom navigation, and transition-only avatar/chevron choreography.
- `app/src/main/res/font/broadway.ttf`: added the locally supplied licensed Broadway font for bundled, deterministic username rendering.
- `cinerific_PROJECT_SNAPSHOT.txt`: refreshed after the accepted source commits and again during this documentation pass so future sessions see the current source and asset inventory.
- `cinerific_worklog_september 28.pdf`: added this first and latest Eastern-Time worklog for September 28 using the established no-part filename convention.

Follow-Up Context

- The settled Welcome avatars remain the visual source of truth. Create Account should continue using those exact complete bitmaps whenever motion-layer separation is not actively required.
- The fixed bubble, sliding character, and reconstructed lower-outline layers are intentionally limited to avatar-carousel motion. Changes to their masks or blend interval should be checked against hair tips, ring shadows, body fills, and both bottom corners on all three selectable characters.
- Broadway is now packaged with the application rather than synthesized from extracted glyph images. Preserve its resource-based rendering, centered fitting, stroke/fill order, and dynamic username source.
- Portrait Create Account intentionally places username artwork and avatar selection before the Username field; landscape remains on the established wide layout.
- All three portrait authentication headings now own a fixed top region, and the doubled bottom banner owns a fixed lower region. Future scrollable controls should remain inside the shared clipped viewport and update maximum-scroll calculations.
- Welcome/Create avatar chevrons move toward their pointing edges only during screen transitions. They should not inherit that translation during settled selection or horizontal avatar dragging.
- Tablet automatic rotation is expected to remain enabled. Orientation testing should preserve `accelerometer_rotation=1` after any emulator control commands.

Output Artifact

- Generated `cinerific_worklog_september 28.pdf` at the repository root using the first-log-of-the-day no-part filename convention.
- Preserved the established four-page U.S. Letter layout, Helvetica text, PDF 1.4 compatibility, OpenAI Codex metadata, right-aligned page footers, and plain-text-readable structure.
- Used the verified September 28, 2026 U.S. Eastern date and documented the actual EDT offset while retaining the historical U.S. EST title label.
- Recorded main through 3b11b22 plus the refreshed project snapshot; the artifact is ready for repository review and commit.
