

Cinerific Android App Work Log - September 26, 2026 (U.S. EST)

Compiled summary for Saturday, September 26, 2026 (U.S. Eastern Time) - focus: continuing the portrait-phone Movies and Shows refinement pass, enlarging genre and view controls without crossing their protected margins, progressively rescaling detailed List cards and their complete internal content, rebuilding center View mode as an intermediate-size horizontal carousel, standardizing title letter spacing across catalog and detail surfaces, replacing Android's activity-closing Back behavior with destination-aware navigation, preserving screen state, and adding a deliberate Home sign-out confirmation with Cinerific focus styling and a two-second red-star loading transition. Generated after reviewing every prior Cinerific PDF worklog, the September 24 baseline, commits 49e40e4 and 4a8332e, the current clean repository state, build/install output, and runtime checks from the connected Samsung phone and available tablet emulator.

Generated in continuity with the established Cinerific worklog cadence from July 12 through September 24: compact opening summary, source-material review, baseline state, goals, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. No September 26 PDF existed before this generation pass, so this artifact uses the first-log-of-the-day no-part filename. Eastern Time was verified from the host as Saturday, September 26, 2026 at 9:52 PM EDT, UTC-04:00. The title retains the historical U.S. EST label while the body records the seasonally accurate EDT offset. This artifact records main through HEAD 4a8332e, Improved Back navigation and sign-out experience.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, July 29, August 1, August 3, August 4, August 5, September 19, September 21, September 21 Part 2, September 23, and September 24.
- Converted the complete corpus with pdftotext and compared title cadence, opening-summary density, section order, technical bullet style, validation language, file inventories, follow-up notes, output-artifact wording, and same-day Part naming.
- Ran pdftotext across all 25 prior PDFs and confirmed the established four-page U.S. Letter geometry. Reviewed the latest artifact's Helvetica typography, PDF 1.4 compatibility, Codex author/creator metadata, extractable text, and right-aligned page footers.
- Reviewed cinerific_PROJECT_SNAPSHOT.txt, read_project.sh context, Git status, recent commit history, commit messages, and the complete source delta from the September 24 implementation baseline at 3188bd3 through HEAD 4a8332e.
- Reviewed the September 26 changes in CinerificDestinationScreen.kt, CinerificViewportNavBar.kt, CinerificApp.kt, and CinerificIntroView.kt, plus the refreshed project snapshot committed with the catalog-layout pass.
- Reviewed runtime work from Samsung SM-G990U R5CRC33MGNZ and the available Standard tablet emulator, including app startup, portrait navigation, catalog mode changes, card taps, Android Back actions, sign-out confirmation behavior, Gradle builds, streamed installs, and relaunches.

Baseline Status Before September 26 Work

- The September 24 pass had already made portrait primary navigation scroll-linked, expanded the Home reel through the available viewport, standardized large-card sizing, converted the leftmost Movies and Shows mode to circular horizontal browsing, stacked the portrait selectors, and symmetrically scaled the detailed List mode.
- Movies and Shows portrait controls were functional but still visually undersized on the phone relative to the recently enlarged catalog content and the protected top/right screen relationships.
- The rightmost List mode still presented a long rectangular selected cell. Its title art, text, metadata, description, rating stars, internal gaps, and blinking frame needed to grow together before the selected unit approached the requested squarer visual balance.
- After those increases, List content spacing no longer read as one consistent system. Image-to-text spacing and the gaps among title, description, metadata, and rating content could crowd the blinking selection frame.
- The center View mode remained a smaller multi-row arrangement. It did not occupy the intended midpoint between the leftmost large cards and rightmost detailed cards, and it still favored vertical grouping instead of the established bidirectional horizontal swipe interaction.
- Android system Back could fall through to Activity closure because the main Compose experience had no destination-aware BackHandler. Returning from a detail screen also discarded the originating catalog context rather than restoring it deliberately.

Cinerific Android App Work Log - September 26, 2026 (U.S. EST)

- Home had no guarded sign-out confirmation. A Back press from the default screen could not offer a reversible Yes/No choice, preserve the current Home state on cancellation, or communicate confirmed sign-out progress before returning to Welcome.

Main Goals for September 26

- Keep all visual tuning scoped to portrait phone presentation until the user explicitly reopens tablet or landscape design work.
- Increase the Movies and Shows genre/view selector scale while retaining the parent screen's established top and right margins.
- Enlarge the complete List card system, including its animated selection frame, then normalize internal padding so every content region remains readable and uncrowded.
- Make the middle View mode the visual midpoint between large cards and List artwork and give it the same bidirectional horizontal browsing model used by Home and the leftmost catalog mode.
- Apply a subtle, consistent title-letter-spacing treatment across middle cards, List titles, and title information shown after a card opens in the hero/detail surface.
- Replace activity-closing Back behavior with predictable in-app navigation and state restoration across detail, catalog, favorites, settings, authentication, and Home states.
- Add a high-visibility Home sign-out prompt whose focus treatment belongs to the Cinerific visual system, then show the existing red-star spinner for exactly two seconds before returning to Welcome.

Work Completed - Portrait Catalog Controls

- Added a phone-portrait viewport navigation multiplier and applied it to both the genre selector and the three-button View selector on Movies and Shows.
- Raised the accepted selector treatment cumulatively to 1.26 times the September 24 size while expanding the hosting width from the same multiplier so the buttons did not clip or invade the protected right edge.
- Preserved the stacked portrait composition, destination banner clearance, selected-state art, genre abbreviations, and all tap targets while leaving tablet and landscape calculations on their existing branches.
- Kept Movies and Shows on one shared implementation so control geometry and interaction did not diverge between the two destination screens.

Work Completed - Detailed List Scale and Spacing

- Progressively enlarged portrait-phone List content through the requested 10 percent, 10 percent, 5 percent, and final 5 percent passes, resulting in a dedicated 1.334025 scale multiplier over the prior phone baseline.
- Scaled artwork, program titles, synopsis text, year/runtime/genre/crew metadata, star stacks, vertical rhythm, corner radii, clear stroke, outer stroke, and blinking selection bounds as one responsive asset rather than adjusting isolated labels.
- Added a separate 0.97 horizontal width multiplier to keep synopsis and metadata columns inside the available content width while retaining the newly increased vertical and typographic scale.
- Replaced the older one-off title start padding, vertical text gap, and metadata column gap with the selected card's clear-stroke value as a shared cell-padding unit.
- Made the title-art-to-selection-frame margin the same logical spacing used among image, text, description, metadata, and rating regions, reducing crowding while keeping the enlarged card visually coherent.
- Preserved center detection, vertical snapping, blinking selection animation, card tap routing, and symmetric screen margins throughout the scaling passes.

Work Completed - Middle View and Typography

- Calculated the portrait-phone middle card width as the midpoint between the shared large-card width and the enlarged List artwork width, giving the center mode a clear intermediate hierarchy.
- Replaced the center mode's portrait multi-row vertical grouping with CinerificCircularCardRow, enabling continuous bidirectional horizontal swiping and the same familiar snap behavior used by Home and the leftmost Movies/Shows mode.
- Retained the existing non-phone composition for tablet and landscape so this requested portrait-phone pass did not alter unrelated layouts.
- Introduced a shared 0.55sp destination title letter-spacing value after small visual tuning passes and applied it to middle-view card titles and rightmost List titles on both Movies and Shows.
- Extended the same letter-spacing principle to the program title in the hero/detail information panel shown after a catalog card is tapped, aligning browsing and opened-card typography.
- Preserved the bundled Cinerific typeface, title weights, line heights, descriptions, star ratings, and content semantics while changing only the requested tracking and layout behavior.

Cinerific Android App Work Log - September 26, 2026 (U.S. EST)

Work Completed - Android Back Navigation and State

- Added Compose BackHandler ownership to the main experience so system Back no longer exits the Activity from ordinary in-app destinations.
- Tracked the destination from which a program detail screen was opened and returned Back to that origin, including Movies, Shows, Favorites, Settings, or Home as applicable.
- Returned Back from non-detail primary destinations to Home after clearing any transient catalog route, creating a predictable navigation ladder before sign-out is offered.
- Wrapped destinations in a saveable state holder so catalog mode, genre, scroll position, Home state, and other remembered screen context survive detail navigation and restoration.
- Exposed handleSystemBack from CinerificIntroView and routed Back through active sign-in, account creation, and recovery subflows so those native intro surfaces close internally rather than closing the app.
- Centralized profile selection and added a short Welcome input guard after sign-out to prevent the confirmation tap from carrying through and immediately selecting an avatar beneath the returning screen.

Work Completed - Home Sign-Out Experience

- Changed Back on Home/default into a dimmed, modal confirmation reading 'Sign out from' and 'Cinerific?' on separate lines, with both choices implemented as real actions.
- Placed Yes on the left and No on the right. Styled the active Yes control with the app's purple fill and kept No as the dismissive dark-gray action.
- Made No and system Back dismiss the prompt and reveal the exact pre-existing Home state; background taps are consumed so the modal cannot accidentally activate content beneath it.
- Replaced the popup's initial static white outline with the same 420-millisecond reverse pulse cadence used by focused title cards, interpolating from bright Cinerific purple #C86BE0 to soft white #E7E7E7.
- Added a transparent clear space between the gray panel and animated outer frame using the Home title-card 10:3 clear-gap-to-stroke ratio. The inner panel, message, and controls scale within that protected frame.
- Changed confirmed sign-out into a dedicated progress state: the dialog disappears, the 72-percent black dim layer remains, Back and pointer input are blocked, and the existing layered red-star Cinerific loading spinner appears centered.
- Held the spinner state for exactly 2,000 milliseconds before invoking the established sign-out path and returning to the settled Welcome screen.

Work Completed - Device Deployment and Runtime QA

- Started the app on the connected USB Samsung phone and kept the available tablet emulator in the runtime environment at the beginning of the session.
- Restricted the active visual iteration and final catalog tuning to phone portrait, as requested, even though the shared implementation continued to support both Movies and Shows.
- Repeatedly assembled the debug APK, streamed it to Samsung SM-G990U R5CRC33MGNZ with adb install -r, force-stopped the prior process, and relaunched com.prahlincinerific/.MainActivity after accepted changes.
- Exercised Movies and Shows selector sizing, all three view modes, horizontal middle-card swiping, List card scale and padding, title tracking, detail opening, detail Back restoration, primary-destination Back, Home prompt cancellation, and confirmed sign-out.
- Verified the two-second spinner uses the project's existing red-star, wheel, and mini-star layers rather than introducing a separate loading asset or animation language.
- Kept the final source commits device-independent and did not add phone-model-specific layout branches beyond the existing responsive less-than-600dp portrait classification.

Validation and Checks Performed

- Ran ./gradlew :app:assembleDebug throughout both implementation groups. Final reported builds completed successfully without Kotlin compilation or Android resource errors.
- Ran git diff --check during the implementation passes without whitespace errors, and confirmed the repository was clean on main tracking origin/main before generating this artifact.
- Confirmed successful streamed debug APK installs and Activity launches on USB serial R5CRC33MGNZ after the final sign-out visual and spinner changes.
- Verified commit 49e40e4, Refined portrait Movies and Shows browsing layouts, changed CinerificDestinationScreen.kt, CinerificViewportNavBar.kt, and cinerific_PROJECT_SNAPSHOT.txt.

Cinerific Android App Work Log - September 26, 2026 (U.S. EST)

- Verified commit 4a8332e, Improved Back navigation and sign-out experience, changed CinerificApp.kt and CinerificIntroView.kt and is the current HEAD.
- Measured the combined source delta from the September 24 implementation baseline as 345 insertions and 86 deletions across four Kotlin files, excluding the refreshed snapshot and prior worklog artifact.
- Verified U.S. Eastern Time directly from the host as Saturday, September 26, 2026 at 9:52 PM EDT with UTC offset -04:00 before choosing the filename and report date.
- Re-read all pre-existing PDFs and checked this output with pdftinfo, pdffonts, pdftotext, page rendering, and image inspection for four-page count, clipping, wrapping, metadata, and footers.

Files Touched During September 26

- app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt: enlarged phone-portrait selector and List systems, normalized List padding, resized middle cards, added horizontal circular browsing, and standardized destination title tracking.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificViewportNavBar.kt: accepted and applied the phone-portrait navigation scale multiplier to genre and View controls.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt: added destination-aware Back handling, saveable destination state, origin restoration, the Home sign-out modal, animated focus frame, transparent frame gap, and two-second sign-out spinner overlay.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt: exposed native intro-flow Back handling for active authentication screens.
- cinerific_PROJECT_SNAPSHOT.txt: refreshed with the catalog-layout commit's September 26 source state.
- cinerific_worklog_september 26.pdf: added this first and latest Eastern-Time worklog for September 26 using the established no-part filename convention.

Follow-Up Context

- Phone portrait remains the active design scope until the user explicitly asks to resume tablet or landscape tuning.
- The 1.26 selector multiplier, 1.334025 List scale, 0.97 List horizontal multiplier, and 0.55sp title tracking now encode the accepted phone-portrait relationships and should be adjusted centrally if future visual review requests another pass.
- The center View mode intentionally shares the project's circular horizontal row engine; future changes should preserve bidirectional browsing and avoid restoring vertical-only grouping on phone portrait.
- Destination state preservation now underpins Back behavior. New detail entry points should set or respect the origin destination so Back continues to restore the correct screen and remembered context.
- The Home sign-out modal deliberately separates cancellation from confirmation, blocks the underlying UI, and uses the title-card clear-frame ratio. Future modal styling should reuse that visual logic rather than introducing an unrelated alert treatment.
- The two-second sign-out delay is an explicit product timing choice. The existing CinerificLoadingSpinner remains the shared loading animation and should stay centered within the dimmed blocking overlay.

Output Artifact

- Generated cinerific_worklog_september 26.pdf at the repository root using the first-log-of-the-day no-part filename convention.
- Preserved the established four-page U.S. Letter layout, Helvetica text, PDF 1.4 compatibility, OpenAI Codex metadata, right-aligned page footers, and plain-text-readable structure.
- Used the verified September 26, 2026 U.S. Eastern date and documented the actual EDT offset while retaining the historical U.S. EST title label.
- Recorded main through 4a8332e and the clean committed implementation state; this PDF is the only new working-tree artifact created by the documentation pass.
