

## Cinerific Android App Work Log - July 18, 2026

Compiled summary for Saturday, July 18, 2026 - focus: refreshing the Cinerific project snapshot, replacing flat destination chrome with Figma-style black/purple rail imagery, moving destination titles into the top rails, correcting the right-side hamburger-to-home transition and rail alignment, embedding the viewport nav inside Movies and Shows, turning genre and mode controls into interactive catalog filters, matching the Figma list-mode rows, and splitting the nested viewport nav into clearer genre, mode, and shared components while adding the final small-collage center mode.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, and July 16: compact opening summary, source-material review, baseline state, goal list, work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the July 18 Cinerific work now present on main and follows the prior root-level PDF naming, four-page letter layout, footer, and plain-text-readable style.

### Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: cinerific\_worklog\_july 12.pdf, cinerific\_worklog\_july 14.pdf, cinerific\_worklog\_july 15 part 1.pdf, cinerific\_worklog\_july 15.pdf, and cinerific\_worklog\_july 16.pdf.
- Used pdftotext and pdftinfo to study the established title pattern, compact opening summary, source-material section, baseline/goals sections, themed work-completed sections, validation language, files-touched list, follow-up close, page footer, letter-size page geometry, and four-page daily-log shape.
- Reviewed the current Cinerific Git state on main tracking origin/main, including the clean status at HEAD 62f05fe and the five July 18 commits: 02ef1dd, 3a69e2d, 2bab846, 2f3179d, and 62f05fe.
- Reviewed git show --stat and commit bodies for the July 18 work: snapshot refresh, destination chrome rail refinements, interactive viewport controls, Figma-style list mode, and Figma-style small-collage mode.
- Reviewed read\_project.sh and cinerific\_PROJECT\_SNAPSHOT.txt to keep this artifact aligned with the Cinerific scanner convention and the project state refreshed earlier on July 18.
- Reviewed app/src/main/java/com/prahlin/cinerific/ui/CinerificChrome.kt, CinerificRightSideNavBar.kt, CinerificDestinationScreen.kt, CinerificViewportNavBar.kt, CinerificViewportGenreNav.kt, CinerificViewportModeNav.kt, and CinerificViewportNavShared.kt.
- Reviewed the Figma-driven visual references used during the day, including the black/purple chrome imagery, right-side nav prototype behavior, Movies/Shows viewport nav, Movies - ALL - List, Movies/Shows small-collage frames, and user-provided prototype screenshots from July 18.
- Used Gradle build output, adb install/launch commands, emulator screenshots, git log/status/diff output, file/resource inspection, and PDF text extraction as validation material. No external PDF package was installed for this worklog.

### Baseline Status Before July 18 Work

- Cinerific already had the July 14 native intro, profile selection, July 15 Home & Default scaffold, July 16 four-clip Home hero reel, and a Figma-derived right-side navigation rail with Home, Movies, Shows, Favorites, and Settings destinations.
- Movies, Shows, Favorites, and Settings existed as reachable destination surfaces, but their chrome still needed to match the Figma prototype more closely, especially the black/purple top and right rail imagery.
- The right-side nav rail had Figma-derived destination icons, but the hamburger state did not yet transform into the Home icon/label the way the prototype showed.
- Destination titles were visually outside the top rail, so screens like Movies and Shows did not read as integrated Figma frames.
- The top rail height and bottom edge alignment were still being tuned by eye against the Home icon and the first destination icon below it.
- Movies and Shows did not yet have the embedded viewport nav behavior from the Figma file: genre filters on the left and collage/list view modes on the right.
- The early destination catalog rows were useful scaffolds, but they still overflowed horizontally in places and did not represent the Figma nested genre/mode screen matrix.
- List mode and small-collage mode still needed deeper Figma matching: list rows lacked full title metadata and rating detail, while the center mode needed four title cards per row with text under each poster.

#### Main Goals for July 18

- Refresh the generated Cinerific project snapshot so later AI sessions can read the current project shape before editing.
- Apply the Figma black/purple bgfill imagery to the destination right rail and top rails instead of relying on flat color approximations.
- Move destination screen names into the top rail and align the rail bottom to the visual midpoint between the Home icon and the icon below it.
- Make the hamburger toggle morph to and from the Home icon/label when the rail opens and closes, matching the original Figma prototype intent.
- Embed the viewport nav inside Movies and Shows as an interactive catalog control rather than a static screenshot-like element.
- Wire genre filtering and mode switching so the catalog can represent the Figma matrix of genre destinations multiplied by three mode views.
- Replace horizontal overflow in Movies/Shows viewport content with wrapped rows while preserving Home/default carousel behavior.
- Refine genre chip sizing, list-mode row information, and center-mode small-collage presentation to approximate the Figma frames more closely.
- Build, install, relaunch, and screenshot-check the accepted states on the running Cinerific tablet AVD.

#### Work Completed - Snapshot and Chrome Foundation

- Created commit 02ef1dd to regenerate cinerific\_PROJECT\_SNAPSHOT.txt after the latest source and resource changes, preserving the project-scanner workflow established on July 15.
- Added CinerificChrome.kt as a reusable chrome background helper that layers a vertical black/purple gradient with Figma-derived bgfill imagery and a subtle black overlay.
- Added chrome\_nav\_bgfill.png and chrome\_top\_bgfill.png under drawable-nodpi as the visual source for the right rail and destination top rails.
- Adjusted VS Code settings as part of the snapshot/chrome pass so the local project tooling remained quieter while the generated snapshot reflected the newer source surface.
- Kept the chrome implementation reusable across rail and top-bar contexts by parameterizing the background resource and alpha rather than duplicating color/image logic.

#### Work Completed - Destination Rail and Top Bars

- Created commit 3a69e2d to refine the destination chrome rail and right nav behavior after direct visual comparison with the Figma prototype.
- Applied the Figma-style black/purple chrome imagery to the right-side rail and to the destination top rail so Movies, Shows, Favorites, and Settings share the same designed surface language.
- Moved Movies, Shows, Favorites, and Settings titles into DestinationTopBar, placing screen names inside the top rail instead of floating outside it.
- Updated the rail-height calculation so the top rail bottom aligns to the midpoint between the Home icon and the first destination icon, then added a small downward visual nudge after emulator review showed the midpoint still read too high.
- Updated the hamburger toggle so the closed menu icon transitions into the Home icon and HOME label when expanded, with the Home item no longer duplicated in the rail stack.
- Shifted Movies, Shows, and Favorites upward to better match the prototype spacing and kept Settings anchored with bottom breathing room.
- Added .copilotignore to keep noisy generated/build/context files out of GitHub Copilot suggestions while leaving the source changes focused on the Cinerific UI.

#### Work Completed - Interactive Viewport Nav

- Created commit 2bab846 to add the embedded viewport nav to Movies and Shows catalog screens.
- Added ViewportGenre and ViewportMode state so the nested nav can filter catalog content by genre and switch between the available view modes.
- Implemented a Figma-style viewport nav bar with genre chips on the left and mode buttons on the right, placed within the actual Movies/Shows content header rather than outside the screen composition.
- Wired Movies and Shows so selecting ACT, COM, CRI, DOC, DRA, HOR, THR, or ALL updates the visible program rows immediately.
- Changed viewport catalog content to wrap card rows within the available content area instead of horizontally scrolling or clipping off the right edge.

- Preserved the Home/default screen carousel behavior so the wrap change only affected the nested viewport screens that needed it.
- Built and checked the new interactions on the AVD after the debug APK was installed, confirming the nav controls were tappable and the catalog state changed.

#### Work Completed - Figma List Mode

- Created commit 2f3179d to rebuild the right-hand List mode after the Figma Movies - ALL - List prototype.
- Added rich list rows with large poster imagery, rounded corners, shadow treatment, uppercase title text, year, synopsis, runtime, genre, director, producer, and five-star ratings.
- Added Figma-card poster resources for key list titles: One Last Breath, Sink or Swim, The Baller, Troublemaker, Ignition, Eruption, If I May, The Playmate, and Help.
- Mapped listPosterDrawableId so list mode can use the closer Figma poster assets where available while falling back to existing home card artwork for the rest of the catalog.
- Added ProgramDetails metadata for key prototype titles and deterministic fallback details for remaining movies and shows so list rows always contain useful information.
- Aligned list spacing, row proportions, image size, typography, and rating placement closer to the Figma reference while keeping collage modes available through the same viewport nav.

#### Work Completed - Component Split and Small Collage Mode

- Created commit 62f05fe to split the nested viewport nav into smaller components and implement the Figma-style center mode.
- Separated the viewport genre cluster into CinerificViewportGenreNav.kt, the mode cluster into CinerificViewportModeNav.kt, and shared constants/glyph helpers into CinerificViewportNavShared.kt.
- Kept CinerificViewportNavBar.kt as the coordinator that arranges the genre and mode components while preserving the shared ViewportGenre and ViewportMode enums.
- Renamed the modes to CollageLarge, CollageSmall, and List so the left, center, and right controls describe their real behavior instead of the earlier generic collage/grid/list wording.
- Mapped the center mode button to DestinationProgramSmallCollage and preserved the left mode button as the larger three-card collage view.
- Implemented the small-collage layout with four title cards per row, 200 by 150.4 Figma-scaled poster cards, rounded 30px corners, shadow treatment, and uppercase centered text beneath each card.
- Sorted Movies and Shows small-collage content against prototype title orders so the first rows match the visible Figma frames more closely.
- Updated placeholder catalog names to visible poster/prototype titles such as No Trespassing, Hungry Heart, Enlightenment, Deadbeat, Playing with Fire, Incan Descent, Skin and Bones, and The Appetizer.
- Verified the final Movies and Shows center-mode screens on emulator screenshots after building and reinstalling the debug APK.

#### Validation and Checks Performed

- Ran ./gradlew :app:assembleDebug during the July 18 implementation passes; the final small-collage build completed successfully.
- Installed the debug APK on emulator-5554 with adb install -r and launched com.prahlincinerific.MainActivity for visual checks.
- Navigated through profile selection into Home, opened the right rail, and checked Movies and Shows destination behavior through the running tablet AVD.
- Captured and reviewed emulator screenshots for the destination chrome rail, top-bar placement, viewport nav placement, list mode, Movies small-collage mode, and Shows small-collage mode.
- Verified that the center mode button is selected when small collage is active and that four cards render per row with visible titles beneath the artwork.
- Used git log --date=local and git show --stat to confirm the five July 18 commits and their touched-file scope.
- Confirmed git status --short --branch is clean on main tracking origin/main before generating this PDF.
- Read all pre-existing Cinerific worklog PDFs before producing this artifact so the daily log follows the established naming, structure, length, and content type.

#### Files Touched During July 18

- cinerific\_PROJECT\_SNAPSHOT.txt: regenerated snapshot file reflecting the latest Cinerific source, asset, and project layout state.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificChrome.kt: new reusable chrome background composable for Figma-style top and right rail imagery.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificRightSideNavBar.kt: hamburger-to-home transition, rail spacing, midpoint top-rail relationship, bgfill use, destination selection, and prototype-aligned icon stack behavior.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt: destination top rails, embedded viewport nav, genre filtering, wrapped collage layouts, rich list rows, small-collage rows, metadata, title ordering, and updated catalog titles.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificViewportNavBar.kt: simplified into a coordinator for separate genre and mode nav components.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificViewportGenreNav.kt: new standalone genre-chip component for ALL, ACT, COM, CRI, DOC, DRA, HOR, and THR controls.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificViewportModeNav.kt: new standalone CollageLarge, CollageSmall, and List mode-control component.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificViewportNavShared.kt: shared colors, dimensions, glyph-cell helper, and viewport scaling utility for nested nav controls.
- app/src/main/res/drawable-nodpi/chrome\_nav\_bgfill.png and chrome\_top\_bgfill.png: Figma-style black/purple rail and top-bar image assets.
- app/src/main/res/drawable-nodpi/figma\_card\_\*.jpg: list-mode poster assets for the key Figma list titles.
- .vscode/settings.json and .copilotignore: project-context cleanup related to snapshot/tooling noise and Copilot suggestion scope.
- cinerific\_worklog\_july 18.pdf: this generated daily worklog artifact at the repository root.

#### Follow-Up Context

- The viewport nav is now interactive and componentized, but future work can still add explicit route/state models if each genre-by-mode combination needs deep-linkable navigation rather than local screen state.
- Movies and Shows have better Figma-aligned collage, small-collage, and list modes, but the project still uses local placeholder metadata for many non-key titles until final content data exists.
- List mode now shows useful movie/show information, but additional Figma poster exports could replace remaining fallback card artwork for a more complete prototype match.
- The right rail and top rails use Figma-style chrome imagery, but additional device-size checks remain useful if the app targets more tablet aspect ratios than the current Cinerific AVD.
- Accessibility labels, focus traversal, remote/keyboard navigation, card click behavior, and detail-screen routing can be layered after the visual viewport system is accepted.
- The next worklog should continue from HEAD 62f05fe unless the user adds new commits before the next session.

#### Output Artifact

- Filename: cinerific\_worklog\_july 18.pdf
- Created at the repository root in /Users/prahlin/gh/cinerific.
- Follows the Cinerific filename convention established by cinerific\_worklog\_july 12.pdf and continued by the July 14, July 15, and July 16 artifacts, including the space before the day number.
- Follows the established Alla Vostra/Prahlín/Cinerific daily worklog structure while keeping the body content specific to Cinerific work.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: cinerific\_worklog\_july 18.pdf.
