

Cinerific Android App Work Log - August 3, 2026 (U.S. EST)

Compiled summary for Monday, August 3, 2026 (U.S. EST) - focus: continuing the post-August-1 auth-preview and Forgot Password polish pass by reviewing the current project snapshot and all prior Cinerific worklogs, iterating the Create Account, Sign In, and Forgot Username/Password prompt row, matching the slide-in title destination for Create My Account and Forgot Username/Password to Sign In, correcting the Forgot title target after a Kotlin View.x resolution issue, preserving the requested all-assets-on-right Forgot layout, replacing the Forgot recovery copy with friendlier paragraph-length guidance, adding Username versus Password recovery wording and button states, doubling the auth chevron wing spread without changing vertical placement, validating the result on the Cinerific Standard Tablet AVD, committing the source work as 7e6835e, refreshing the project snapshot, and generating this latest Cinerific PDF worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, July 29, and August 1: compact opening summary, source-material review, baseline state, goals, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. No August 3 Part 1 PDF existed in the repository, so this artifact follows the no-part filename convention for the first August 3 worklog. It records the current source state on main through HEAD 7e6835e, plus the refreshed snapshot and generated worklog artifact from this August 3 pass.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, July 29, and August 1.
- Converted the prior worklogs with pdftotext and inspected headings, line counts, opening-summary rhythm, section order, validation language, files-touched style, follow-up close, output-artifact phrasing, and the recent U.S. EST title convention.
- Ran pdftinfo across the earlier PDFs to preserve the four-page letter layout, title metadata, author/creator/producer fields, PDF 1.4 output, footer convention, and Codex standard-library PDF generator style.
- Ran ./read_project.sh and reviewed the refreshed cinerific_PROJECT_SNAPSHOT.txt for the current source layout, generated worklog inventory, root file tree, snapshot timestamp convention, and inclusion of the root icon asset added by the latest source commit.
- Reviewed git status, git log, git show --stat, and git show --name-status around HEAD 7e6835e, Refined account prompt slide-ins and recovery flow, with context from the August 1 worklog commit 3e95c79 and source commit 2a08d44.
- Reviewed app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt around account-prompt labels, slide-in title centers, Forgot recovery state, custom canvas paragraph wrapping, dynamic input labels, submit-button states, chevron geometry, hit testing, and keyboard/focus behavior.
- Reviewed runtime context from the pass: Cinerific Standard Tablet AVD availability, debug APK install output, MainActivity launches, adb screenshots for Create My Account and Forgot Username/Password, and visual inspection of the final title centering.

Baseline Status Before August 3 Work

- Cinerific entered August 3 with the August 1 auth-preview foundation committed and logged: Sign In and Create Account mock flows, a tappable Forgot Password flow, a right-side Forgot form stack, recovery selector basics, custom canvas input behavior, dim overlays, keyboard lift, chevron return, and project snapshot generation.
- The settled account prompt row still used the earlier Create Account and Forgot Password product wording and did not yet reflect the final Create My Account and Forgot Username/Password labels requested for preview and slide-in destinations.
- The Forgot recovery screen existed, but the left-side explanation still needed friendlier paragraph-length copy, larger tiered typography, and explicit Username-or-Password recovery guidance.
- The recovery selector and submit actions needed final wording: Recover my:, Send Reminder Link for username recovery, Send Reset Link for password recovery, and Username as the visible username field label.
- The Forgot title and Create title still needed to land on the same horizontal centerline as Sign In rather than reading as left/right slide-up destinations from their prompt positions.
- The downward chevrons needed a wider wing spread across Sign In, Create Account, and Forgot Username/Password while keeping their existing vertical placement and alignment behavior intact.
- The user explicitly asked not to change the all-assets-on-right layout, so every Forgot recovery polish item had to preserve the accepted paragraph-left and controls-right composition.

Main Goals for August 3

- Apply the requested product language changes across the sign-in preview and Forgot recovery slide-in without disturbing the established auth-screen drawing system.
- Replace the Forgot screen explanation with the approved three-paragraph friendly copy and tune paragraph font sizes so the top line, middle paragraph, and bottom paragraph match the requested hierarchy.
- Expand Forgot recovery from a reset-only presentation into a username/password helper flow with dynamic button text, helper copy, loading state, sent state, and visual feedback.
- Match the slide-in destination X position for Create My Account and Forgot Username/Password to Sign In while keeping each prompt label drawn and tapped from its normal preview-row position.
- Keep the Forgot screen all-assets-on-right layout exactly intact while improving title alignment, copy, selector wording, input label behavior, and submit affordance clarity.
- Compile, install, screenshot, and inspect the result on the Cinerific Standard Tablet AVD, then record the committed source state and worklog artifact.

Work Completed - Project Review and Runtime Orientation

- Read the available root-level worklogs from July 12 through August 1 and used their shared structure as the template for this artifact.
- Refreshed cinerific_PROJECT_SNAPSHOT.txt with ./read_project.sh before generating the worklog so the artifact pass started from the current root tree and source dump.
- Confirmed the latest source commit on main was 7e6835e, containing the account prompt slide-in and recovery-flow refinements requested after the August 1 pass.
- Confirmed the pending tree after the source commit contained only the refreshed project snapshot generated during this worklog pass.
- Kept this work local to the Android app and repository files; no Figma MCP, web lookup, or external PDF package was needed for the worklog artifact.

Work Completed - Account Prompt Copy and Slide-In Centers

- Renamed the preview Create Account prompt to Create My Account and renamed Forgot Password to Forgot Username/Password so the settled sign-in preview matched the requested product language.
- Increased prompt hit widths for the longer Create My Account and Forgot Username/Password labels so the tappable zones stayed comfortable after the text changed.
- Updated Sign In, Create My Account, and Forgot Username/Password title drawing so active slide-in titles use centered text alignment and a shared target center based on ACCOUNT_PROMPT_SIGN_IN_CENTER_X.
- Preserved Create and Forgot source positions in the settled prompt row while changing only their slide-in destination center, so the prompt row still reads left, center, and right before a flow opens.
- Fixed the late Forgot alignment issue caused by a removed parameter letting Kotlin resolve x as the View.x property; the Forgot title target now explicitly uses the Sign In center constant.
- Verified by emulator screenshot that Create My Account and Forgot Username/Password land centered under the Cinerific logo while the Forgot controls remain on the right side.

Work Completed - Forgot Recovery Copy and Typography

- Replaced the older Enter the email address copy with the approved three-paragraph text beginning No Sign-In Information? No problem., followed by the recovery-selection guidance and the account-existence-safe helper paragraph.
- Extended wrappedTextLines so paragraph breaks are preserved instead of flattening the Forgot copy into one continuous wrapped block.
- Added a Forgot-specific paragraph renderer that can draw the lead line, middle paragraph, and bottom paragraph with separate text sizes and line heights.
- Increased the first sentence through the requested font-size iterations and matched the bottom paragraph font size to the middle paragraph font size in the final state.
- Kept the left-side paragraph placement and width aligned with the accepted all-assets-on-right layout rather than pulling the explanatory text into the control column.

Work Completed - Recovery Selector and Submit States

- Changed the selector label from the earlier recovery wording to Recover my: and kept Username and Password as the two selectable targets.
- Updated username recovery to use Username as the input label and Send Reminder Link as the primary action, while password recovery uses Email Address and Send Reset Link.

- Added dynamic helper text for empty, idle, loading, and sent states so the right-side form responds to the selected recovery target and current input state.
- Added submit-button press handling, disabled-state styling, loading-state shimmer, sent-state check feedback, and sent button text for both username and password recovery.
- Reset the Forgot submission state when the user switches recovery target or edits the recovery input, preventing stale sent/loading feedback from persisting under a new mode.
- Preserved email-oriented keyboard behavior for password reset mode and normal text behavior for username reminder mode.

Work Completed - Chevron Geometry and Layout Preservation

- Matched the Forgot downward-facing chevron center to the active Create Account form centerline so it aligns with the Create Account and Sign In slide-in treatment.
- Doubled the shared back-chevron wing width and hit width, expanding the left/right spread across Sign In, Create My Account, and Forgot Username/Password without changing top gaps, vertical placement, or stroke style.
- Kept Forgot recovery controls, selector, input field, submit button, helper text, and chevron in the right-side form column, preserving the user-requested all-assets-on-right layout.
- Avoided unrelated navigation, Home/default, catalog, Favorites, Settings, or detail-screen changes during this auth-specific pass.

Work Completed - Validation, Snapshot, and Commit State

- Ran `rg` and focused `sed` inspections over `CinerificIntroView.kt` to verify the title target centers, prompt helper centers, field labels, button labels, and absence of stale `x` plus `MOCK_FORM_WIDTH` title targeting.
- Ran `./gradlew :app:installDebug` after the final source fix; the build succeeded and installed `app-debug.apk` on `Cinerific_Standard_Tablet` at emulator-5554.
- Launched `com.prahlincinerific.MainActivity` and captured final Create My Account and Forgot Username/Password screenshots from the emulator after their slide-ins settled.
- Visually inspected `/tmp/cinerific_create_title_center_final.png` and `/tmp/cinerific_forgot_title_center_final.png`, confirming centered titles and the preserved right-side Forgot form stack.
- Ran `git diff --check` against `CinerificIntroView.kt` during the source pass; no whitespace errors were reported.
- Committed the source and snapshot work on main as HEAD 7e6835e, Refined account prompt slide-ins and recovery flow, including `CinerificIntroView.kt`, `cinerific_PROJECT_SNAPSHOT.txt`, and the root `_cinerific_icon.png` asset.
- Ran `./gradlew :app:compileDebugKotlin` during this artifact pass; the Kotlin compile completed successfully with BUILD SUCCESSFUL.

Validation and Checks Performed

- Converted all pre-existing Cinerific worklog PDFs to text with `pdftotext -layout` and inspected their headings, line counts, section ordering, prose density, and latest August 1 conventions before generating this artifact.
- Ran `pdftinfo` on the existing worklogs, especially August 1, to confirm title metadata, subject, author, creator, producer, letter page size, four-page count, and PDF 1.4 output.
- Ran `date` and `TZ=America/New_York date` during the artifact pass; both local/Eastern workspace clocks reported Monday, August 3, 2026 EDT, matching the source commit date for this worklog.
- Ran `git status --short`, `git log --oneline --decorate`, `git show --stat --summary HEAD`, `git show --name-status --format=fuller HEAD`, and `git diff --stat` for the refreshed snapshot state.
- Ran `./read_project.sh` during this artifact pass and reviewed the snapshot diff showing the refreshed timestamp, `_cinerific_icon.png` inventory, and current `CinerificIntroView.kt` source dump.
- Ran `./gradlew :app:compileDebugKotlin` during this artifact pass; the build completed successfully after the committed account prompt and Forgot recovery changes.
- Generated this PDF with a small standard-library PDF writer so the output remains text-extractable and consistent with prior Cinerific worklogs.

Files Touched During August 3

- `app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt`: account prompt labels, hit widths, Sign In/Create/Forgot title target centers, Forgot body copy, paragraph-break wrapping, tiered paragraph typography, recovery selector label, username/password button text, dynamic helper/sent/loading states, submit hit testing, shimmer/check feedback, chevron width, and Forgot right-side layout preservation.

- _cinerific_icon.png: root Cinerific icon asset added to the repository in the August 3 source commit.
- cinerific_PROJECT_SNAPSHOT.txt: refreshed generated project snapshot timestamp, root file tree, icon inventory, worklog inventory, and CinerificIntroView.kt source dump during the source and artifact passes.
- cinerific_worklog_august 3.pdf: new root-level PDF worklog artifact for the August 3 pass, intentionally without a part suffix because no August 3 Part 1 PDF existed in the repository.

Follow-Up Context

- The Forgot Username/Password flow remains a native mock/prototype; Send Reminder Link and Send Reset Link are visual states and do not yet call a backend account-recovery service.
- The latest accepted layout keeps all Forgot recovery controls on the right and all explanatory copy on the left, so future revisions should avoid moving those assets unless the user explicitly asks.
- The centered slide-in destination for Create My Account and Forgot Username/Password is now tied to the same center constant as Sign In; any future prompt-row changes should preserve that distinction between preview source position and active title destination.
- The next source pass can wire real recovery, validation errors, backend email behavior, or further auth navigation after the current copy and layout treatment is accepted.

Output Artifact

Generated cinerific_worklog_august 3.pdf at the repository root. The file follows the established Cinerific root-level worklog naming, letter-size PDF layout, text-extractable content style, footer convention, metadata pattern, PDF 1.4 output, and no-part filename rule for the first August 3 worklog artifact.
