

Cinerific Android App Work Log - August 1, 2026 (U.S. EST)

Compiled summary for Saturday, August 1, 2026 (U.S. EST) - focus: continuing the post-July-29 auth-preview and emulator-handoff pass by reviewing the current project snapshot and all prior Cinerific worklogs, shutting down the Alla Vostra Android Small and Android Large AVDs, booting the Cinerific Standard Tablet AVD, installing and launching Cinerific on that emulator, matching the Create Account and Forgot Password prompt typography to Sign In, creating a tappable Forgot Password slide-in screen, shaping the reset UI through multiple layout revisions, adding Username versus Password recovery selection, preserving the requested left-side explanatory paragraph, validating the right-side form stack on-device, committing the source work as 2a08d44, refreshing the project snapshot, and generating this latest Cinerific PDF worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, and July 29: compact opening summary, source-material review, baseline state, goals, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. No August 1 Part 1 PDF existed in the repository, so this artifact follows the user-requested no-part filename convention for the first August 1 worklog. It records the current source state on main through HEAD 2a08d44, plus the refreshed snapshot and generated worklog artifact from this August 1 pass.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, and July 29.
- Converted the prior worklogs with pdftotext and inspected headings, word counts, section order, opening-summary rhythm, validation language, files-touched style, follow-up close, and output-artifact phrasing.
- Ran pdffinfo across the earlier PDFs to preserve the four-page letter layout, title metadata, author/creator/producer fields, PDF 1.4 output, footer convention, and Codex standard-library PDF generator style.
- Ran ./read_project.sh and reviewed the refreshed cinerific_PROJECT_SNAPSHOT.txt for current source layout, generated worklog inventory, current file tree, and snapshot timestamp convention.
- Reviewed git log, git status, git show --stat, and git show --name-status around HEAD 2a08d44, Refined auth preview typography and forgot-password flow.
- Reviewed CinerificIntroView.kt and CinerificApp.kt around intro rendering, account-prompt typography, native custom View touch handling, mock auth flow state, field focus, IME behavior, dim overlays, chevron return, and fallback Compose prompt text.
- Reviewed emulator and runtime context from the pass: Alla Vostra AVD shutdown, Cinerific Standard Tablet boot, emulator-5554 device availability, debug APK installs, MainActivity launches, and screenshots captured for the revised Forgot Password flow.

Baseline Status Before August 1 Work

- Cinerific entered August 1 with the July 29 carousel, selected-stroke, list snap, detail-library, and static title-card work committed and logged.
- The mock Sign In and Create Account flows already existed in the native intro view, including input fields, dropdowns, remembered state, keyboard handling, dimmed focus, landscape lift behavior, and Create Account avatar carousel interactions.
- The settled sign-in preview displayed Create Account, Sign In, and Forgot Password prompts, but the secondary prompt text still needed to match Sign In in weight and size across the active native intro and fallback Compose path.
- Forgot Password existed only as a visible prompt in the action row; it did not yet have its own tap target, transition state, slide-in screen, reset form, input behavior, or back-chevron return path.
- The active development environment also needed emulator handoff from Alla Vostra test devices back to the Cinerific Standard Tablet AVD before validating the current app.
- No August 1 root-level Cinerific worklog PDF existed before this artifact pass, and the user explicitly requested omitting a part suffix unless an August 1 Part 1 file was already present.

Main Goals for August 1

- Study the current project snapshot and all existing worklogs before changing or documenting the project state.
- Shut down Alla Vostra Android Small and Android Large AVDs, boot the Cinerific Standard Tablet AVD, install the app, and verify that Cinerific was the focused activity.
- Make Create Account and Forgot Password match Sign In typography on the sign-in preview screen.
- Create a Forgot Password slide-in screen that mimics the Sign In and Create Account transition logic, custom canvas styling, input behavior, dim focus, and chevron return.
- Iterate the Forgot Password layout into a right-side form stack, keep the explanatory paragraph on the left side, and add a compact Username/Password recovery selector between the Forgot Password header and the form field.
- Ensure Password recovery shows the Email Address placeholder, while Username recovery changes the same field to Username.
- Compile, install, screenshot, and touch-test the result on the Cinerific Standard Tablet AVD, then record the finished source state and worklog artifact.

Work Completed - Project Review and Emulator Handoff

- Ran read_project.sh, reviewed the generated Cinerific project snapshot, and read through the established worklog history before continuing the auth-preview work.
- Located all existing root-level Cinerific worklog PDFs and confirmed that the project worklog sequence ran through July 29 before the August 1 artifact was created.
- Shut down the Alla Vostra Android Small and Android Large AVDs that were occupying emulator sessions from the previous project context.
- Booted the Cinerific_Standard_Tablet AVD, confirmed it appeared as emulator-5554, installed the debug APK, and launched com.prahlincinerific.MainActivity.
- Verified that the Cinerific activity was focused after install and launch so subsequent visual checks were performed against the correct app and device.

Work Completed - Auth Preview Typography

- Updated the native intro account-prompt drawing so Create Account and Forgot Password used the same text size as Sign In rather than the older secondary-size scale.
- Removed the stale native secondary prompt scale constant after it stopped driving the active custom View prompt rendering.
- Updated the fallback Compose intro constants so accountPromptSecondaryTextSize evaluates to the same scale as Sign In.
- Set the fallback Compose Create Account and Forgot Password SignInPromptText calls to FontWeight.Black, keeping dormant paths visually aligned with the native intro treatment.
- Installed and relaunched the debug build on the standard tablet AVD and captured a sign-in-preview screenshot confirming the three prompt labels matched in size and style.

Work Completed - Forgot Password Flow Foundation

- Added Forgot Password settled-screen hit testing, pressed-state tracking, launch routing, and reset behavior alongside the existing Create Account and Sign In prompt paths.
- Extended the mock account flow state with a ForgotPassword branch so the new screen has its own draw path, active field list, form center, and transition source label.
- Animated the Forgot Password title from the right-side prompt into the form header, using the same custom canvas transition style as the Sign In and Create Account flows.
- Built the reset form with a best-practice explanatory paragraph, a single recovery input field, Send Reset Link action, account-existence-safe helper copy, and the same back chevron convention.
- Reused the existing field renderer, input connection, label animation, caret drawing, keyboard focus, dimmed overlay, and landscape lift behavior for the Forgot Password input field.
- Matched the chevron hit box to the new Forgot Password layout so tap-to-return and drag-up return behavior stayed consistent with the existing auth screens.

Work Completed - Right-Side Stack and Recovery Selector

- Moved the Forgot Password form stack to the right-side Create Account-style column while leaving the explanatory paragraph on the left/center side as requested.

- Added a new recovery selector state with Password as the default mode and Username as an alternate mode.
- Drew an I forgot my: horizontal selector row with Username and Password boxes and selected/pressed visual states in the same translucent rounded-field language as the form controls.
- Placed the selector between the Forgot Password header and the input field, then compacted the label, box widths, gaps, and text size so the full row fits inside the form field width.
- Changed the visible input label dynamically: Password mode shows Email Address, while Username mode shows Username.
- Updated the email-field input type in Forgot Password mode so Username recovery uses normal text keyboard behavior and Password recovery keeps email-oriented keyboard behavior.
- Cleared the current recovery input when switching modes so an email value does not remain under the Username placeholder or vice versa.

Work Completed - Validation, Snapshot, and Commit State

- Ran `./gradlew :app:compileDebugKotlin` after the Forgot Password implementation and after the final selector-layout adjustment; both passes completed successfully.
- Ran `./gradlew :app:installDebug` and relaunched MainActivity on the Cinerific Standard Tablet AVD after source changes that affected runtime visual behavior.
- Captured screenshots for the centered Forgot Password form, the right-side form stack, Username mode, Password mode, field focus with keyboard, and chevron return to the settled sign-in preview.
- Verified that tapping Username changed the right-side placeholder to Username, tapping Password restored Email Address, field focus remained on the right-side field, and the back chevron returned to the settled sign-in screen.
- Committed the auth preview and Forgot Password source work on main as HEAD 2a08d44, Refined auth preview typography and forgot-password flow.
- Ran `./read_project.sh` again during this artifact pass, refreshing `cinerific_PROJECT_SNAPSHOT.txt` at the repository root with the latest timestamp and committed source state.

Validation and Checks Performed

- Converted all pre-existing Cinerific worklog PDFs to text with `pdftotext` and inspected their headings, line counts, word counts, and recent July 28/July 29 prose conventions.
- Ran `pdftotext` on prior worklogs to confirm letter page geometry, four-page page counts, title metadata, PDF version, and Codex standard-library PDF generator metadata.
- Ran `find` and `rg` file searches to confirm that no August 1 Cinerific worklog PDF already existed in the repository before generating this no-part artifact.
- Ran `git log --oneline --decorate`, `git show --stat --format=fuller HEAD`, `git show --name-status HEAD`, `git status --short --branch`, and `git diff --stat` during the artifact pass.
- Ran `./gradlew :app:compileDebugKotlin` and `./gradlew :app:installDebug` after the final source state; the Gradle commands completed successfully.
- Used adb devices, adb shell input taps, adb exec-out screencap, and dumsys window focus checks to validate the app on the connected Cinerific Standard Tablet AVD.
- Generated this PDF with a small standard-library PDF writer so the output remains text-extractable and consistent with prior Cinerific worklogs.

Files Touched During August 1

- `app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt`: prompt hit testing, matching account prompt text size, Forgot Password flow state, title transition, reset form drawing, input behavior, right-side form layout, recovery selector drawing and hit testing, dynamic placeholder labels, and chevron return.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt`: fallback Compose prompt scale and font weight updates so dormant Create Account and Forgot Password labels match Sign In.
- `cinerific_PROJECT_SNAPSHOT.txt`: refreshed generated project snapshot timestamp and source dump after the auth flow commit and again before producing this artifact.
- `cinerific_worklog_august 1.pdf`: new root-level PDF worklog artifact for the August 1 pass,

intentionally without a part suffix because no August 1 Part 1 PDF existed in the repo.

Follow-Up Context

- The Forgot Password screen is still a mock/prototype flow; Send Reset Link is a visual action and does not yet call a backend or account-recovery service.
- The recovery copy, helper text, selector labels, and control placement were intentionally kept editable for future product/design revisions.
- The active app remains installed and focused on the Cinerific Standard Tablet AVD after validation.
- The next source pass can wire real account recovery, validation messaging, or additional auth navigation once the prototype wording and layout are accepted.

Output Artifact

Generated cinerific_worklog_august 1.pdf at the repository root. The file follows the established Cinerific root-level worklog naming, letter-size PDF layout, text-extractable content style, footer convention, metadata pattern, and no-part filename rule requested for August 1 because no August 1 Part 1 worklog was present in the repo.
