

## Cinerific Android App Work Log - July 22, 2026

Compiled summary for Wednesday, July 22, 2026 - focus: documenting the latest post-July-22

Cinerific Home hero presentation correction pass: removing the remaining gray presentation backgrounds, rebuilding the title/description/genre reveal so each line appears in the requested order without disturbing lower lines, correcting title stutter, vertical compression, and top clipping, positioning the combined presentation stack against the bottom-left of the hero reel, studying the Figma Home/default prototype for placement reference, equalizing the final stack-based left and bottom spacing, validating the result on the Cinerific tablet AVD, and generating the latest Cinerific daily worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, and July 22: compact opening summary, source-material review, baseline state, goal list, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the current source state now present on main through HEAD 80c4bf3 and follows the prior root-level PDF naming, four-page letter layout, footer convention, and plain-text-readable style.

### Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: cinerific\_worklog\_july 12.pdf, cinerific\_worklog\_july 14.pdf, cinerific\_worklog\_july 15 part 1.pdf, cinerific\_worklog\_july 15.pdf, cinerific\_worklog\_july 16.pdf, cinerific\_worklog\_july 18.pdf, cinerific\_worklog\_july 19.pdf, cinerific\_worklog\_july 20.pdf, and cinerific\_worklog\_july 22.pdf.
- Used pdftotext and pdftinfo output from the prior PDFs to preserve the established title pattern, opening-summary cadence, source review, baseline/goals sections, themed work-completed sections, validation language, files-touched list, follow-up close, letter-size page geometry, footer convention, and four-page daily-log shape.
- Reviewed read\_project.sh and the refreshed cinerific\_PROJECT\_SNAPSHOT.txt for the current scanner convention, Android source layout, presentation asset inventory, generated screenshot awareness, and prior-session onboarding pattern.
- Reviewed the current Git state on main tracking origin/main. Before the snapshot refresh for this artifact pass, the branch was clean at HEAD 80c4bf3.
- Reviewed git log and git show --stat for the latest presentation correction commit, 80c4bf3, which refined the positioning, timing, order, and visual appearance of all presentation component elements over the Home/default hero video reel.
- Reviewed app/src/main/java/com/prahlin/cinerific/ui/HeroPresentationTextAnimation.kt and app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt, with attention to HomeHeroHeader, active reel index reporting, presentation copy data, text-band rendering, body-line animation, safeDrawing insets, and the bottom-left stack offset.
- Reviewed the Figma-driven Home/default reference context from file key qbpfnwBirp0WoOHSqw1TN, especially the Display - Home & Default frame, the 1194 by 834 hero reel proportions, and the original bottom-left Light As Air presentation placement inside the reel.
- Reviewed AVD screenshot captures from the presentation pass, including title-only failure states, title top-clipping checks, lower-text reveal checks, stack-padding attempts, and final Light As Air and Morbid Temptations validation screenshots.
- Used rg, git status, git log, git show --stat, git diff, read\_project.sh, Gradle assembleDebug output, adb install/launch notes from the implementation pass, AVD screenshots, local PNG inspection, pdftotext, and pdftinfo as validation material. No external PDF package was installed for this worklog.

### Baseline Status Before This Pass

- Cinerific entered this pass with the July 22 title-card, spinner, favorites, and first Home presentation animation work already documented in cinerific\_worklog\_july 22.pdf.
- The Home hero reel already mapped the four raw clips to Light As Air, Infatuation, Into The Wild, and Morbid Temptations, and it already reset the overlay when the active reel index changed.
- The presentation overlay still used imported PNG variant states from Figma, but the visible assets carried an unwanted gray background that made the overlay read as a rectangular slab over the video rather than transparent title art.
- The original Smart Animate approximation moved whole PNG states together, which created flicker, malformed title settling, and lower-line timing problems instead of the requested title, description, and genre reveal order.
- The movie/show title line was the only reliably visible line during some placement attempts. Description and genre text could be pushed beneath the visible reel/taskbar area because the outer exported frame, not the visible stack, was being used as the placement reference.
- Several earlier fixes had solved one symptom while exposing another: title names became less distorted but then clipped into an invisible top boundary, and moving the component bottom-left made it easier to hide the lower text under the emulator taskbar.
- The user wanted the final placement to treat the title, description, and genre as one combined presentation stack, not as only the first visible title variant.
- The final AVD target was emulator-5554, with the user specifically checking whether the result was live in the Android virtual device after each accepted pass.

### Main Goals for July 22 Artifact Scope

- Make every presentation variant asset render with a transparent background instead of the visible gray export fill.
- Smooth the reveal sequence so the movie/show title fades in first, the description fades in second, and the genre line moves/fades in third.
- Keep already-visible below-text lines stable when another line appears, avoiding whole-stack jumps or lower-line displacement.
- Eliminate title malformation, stutter, flicker, and vertical compression before the title settles into place.
- Restore the genre line for all four presentation presets, including Documentary/Nature/Educational and the other three title sets.
- Preserve the corrected title look from the original PNG artwork while preventing the top of each title from clipping into an invisible boundary.
- Reposition the presentation stack to the bottom-left of the hero reel using the Figma prototype as a placement reference.
- Tune the left and bottom padding through the requested halving/tripling passes and then equalize the final measurement from the combined stack, not from the title-only visible top line.
- Account for the Android tablet safe-bottom/taskbar region so the description and genre lines remain visible on the AVD.
- Build, install, relaunch, screenshot-check, and document the accepted current state in the latest daily worklog PDF.

#### Work Completed - Transparent Presentation Assets

- Reprocessed all twenty-eight presentation variant PNGs for Light As Air, Infatuation, Into The Wild, and Morbid Temptations so the ugly gray background color became transparent.
- Kept the existing drawable-nodpi resource names intact so CinerificHomeScreen and HeroPresentationTextAnimation did not need a new resource mapping layer.
- Preserved the title artwork, decorative details, and Figma-exported line art while removing only the background pixels that made the assets look like gray plates over the hero reel.
- Verified the asset-size changes in the latest Git commit and refreshed snapshot inventory: the presentation PNGs became smaller after gray-background removal, which matched the expected transparency cleanup.
- Checked intermediate asset-inspection screenshots against dark backgrounds to confirm that the presentation art itself remained visible while the background no longer filled the rectangle.

#### Work Completed - Reveal Timing and Lower Text

- Replaced the previous whole-frame transition behavior with elapsed-time layer control inside HeroPresentationTextAnimation.kt, giving title, description, and genres their own reveal windows.
- Implemented the requested order: title reveal from the beginning of the overlay sequence, description reveal after the title, and genre reveal/move-in after the description.
- Rendered description and genre copy as Compose Text layers instead of relying on clipped lower bands from the PNG variants, which made the lower lines predictable and recoverable across all four presets.
- Added per-presentation copy data for descriptions and genre lists: Light As Air, Infatuation, Into The Wild, and Morbid Temptations now each have stable text values in code.
- Used fixed line height and zero letter spacing for the Compose body text so the description and genre rows do not resize the layout or shift the already-visible title line.
- Preserved the genre move-in behavior with a small vertical slide while leaving title and description placement stable once they have appeared.
- Confirmed on the AVD that the genre line appears for all presets after the sequencing fix, including the Into The Wild documentary/nature/educational row that had previously never appeared.

#### Work Completed - Title Rendering Fixes

- Reworked title rendering through a Canvas-based band draw, using the original PNG title band as the visual source while clipping only the intended title region.
- Removed the oversized image-scaling path that made title names look vertically squished or compressed before they settled.
- Top-aligned the painted title band inside its clipped area so the artwork no longer jumped or resized during reveal.
- Adjusted clipping boundaries so the top of each title no longer hits an invisible wall, preserving the original PNG look that the user approved.
- Removed the earlier duplicated/shadow-like title layer behavior that contributed to flicker and visual stutter.
- Kept the title reveal as an opacity transition rather than a scale fight, which reduced malformed settling and kept each title visually closer to its source artwork.

#### Work Completed - Bottom-Left Stack Placement

- Changed the overlay container alignment from centered placement to bottom-start placement inside the Home hero reel, so the presentation belongs to the lower-left of the video rather than the middle of the frame.

- Studied the Figma Home/default prototype and used the 1194 by 834 reel frame plus the Light As

Air presentation reference as the basis for placement discussions.

- Added explicit presentation padding constants and iterated through the requested left/bottom adjustments: initial bottom-left movement, halved padding, tripled bottom padding, and later combined-stack correction.
- Added contentBottomPx for each HeroPresentation so placement can measure the settled genre line as the bottom of the visible stack instead of the bottom of an invisible exported frame.
- Reworked the y offset formula so the stack is positioned from viewportHeight minus contentBottomPx minus bottom padding, which directly anchors the visible genre bottom edge.
- Added WindowInsets.safeDrawing bottom handling through LocalDensity so the stack clears the Android tablet taskbar/nav area on the AVD.
- Kept the left inset stable while increasing the bottom stack allowance to match the user's final intent: the full title/description/genre stack stays above the visible bottom instead of only the title line being visible.
- Verified the final Light As Air screenshot showed title, description, and genres together with clear bottom spacing, then captured Morbid Temptations as a second reel check to confirm the fix was not title-specific.

#### Work Completed - Commit and Handoff

- Built and installed intermediate debug APKs during the presentation pass so the user could see each correction live on emulator-5554 rather than only in source code.
- Kept the HomeHeroHeader integration intact: HeroReelVideo still reports the active reel index, and HeroPresentation.forReelIndex still maps the four reels to their matching presentation sets.
- Preserved the July 22 hero reel, favorites, spinner, and title-detail work while scoping this correction pass to the Home/default presentation overlay and its presentation PNG assets.
- Recommended the concise commit header fixed-home-hero-presentation-stack-padding-and-reveals and then adapted the commit notes into past tense at the user request.
- Accepted source state was committed as 80c4bf3 with a detailed message describing equalized stack-based left/bottom padding, settled-genre anchoring, visible description/genre variants, safe-bottom inset handling, corrected title rendering, and smooth staggered reveals.
- Refreshed cinerific\_PROJECT\_SNAPSHOT.txt during this worklog pass so the current generated context now sees the corrected presentation asset sizes and the screenshot inventory from the validation run.

#### Validation and Checks Performed

- Ran ./gradlew :app:assembleDebug during the accepted presentation implementation pass; the debug build completed successfully.
- Installed the resulting debug APK on emulator-5554 with adb -s emulator-5554 install -r app/build/outputs/apk/debug/app-debug.apk and relaunched com.prahlincinerific.MainActivity.
- Entered the Home/default screen through the profile selection flow and captured AVD screenshots after the title, description, and genre reveal timing had settled.
- Reviewed screenshots that showed the title-only failure, the description-under-taskbar failure, the safeDrawing attempt, and the final stack-bottom-triple state with all three lines visible.
- Captured and inspected a follow-up screenshot after the reel advanced to Morbid Temptations, confirming that the title, description, and genres remained visible on another preset.
- Ran git status --short --branch before generating this artifact and confirmed main was aligned with origin/main at HEAD 80c4bf3 before read\_project.sh refreshed the tracked snapshot.
- Ran ./read\_project.sh for this artifact pass, producing an updated cinerific\_PROJECT\_SNAPSHOT.txt that records the current presentation assets and validation screenshots.
- Ran ./gradlew :app:assembleDebug again after studying the worklogs and snapshot; the debug build completed successfully with BUILD SUCCESSFUL in 12 seconds.
- Read all pre-existing Cinerific worklog PDFs before producing this artifact so the new worklog follows the established naming, structure, length, and content type.

#### Files Touched During This Artifact Scope

- app/src/main/java/com/prahlin/cinerific/ui/HeroPresentationTextAnimation.kt: transparent-background presentation handling, per-title copy data, elapsed-time reveal sequencing, Canvas title-band rendering, Compose description/genre rendering, stack-bottom measurement, and safe-bottom placement.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt: existing HomeHeroHeader integration continued to provide active reel index changes into HeroPresentationTextAnimation.
- app/src/main/res/drawable-nodpi/light\_as\_air\_presentation\_default.png through light\_as\_air\_presentation\_variant\_7.png: transparent-background Light As Air presentation assets.
- app/src/main/res/drawable-nodpi/infatuation\_presentation\_default.png through infatuation\_presentation\_variant\_7.png: transparent-background Infatuation presentation assets.
- app/src/main/res/drawable-nodpi/into\_the\_wild\_presentation\_default.png through into\_the\_wild\_presentation\_variant\_7.png: transparent-background Into The Wild presentation assets.
- app/src/main/res/drawable-nodpi/morbid\_temptations\_presentation\_default.png through

morbid\_temptations\_presentation\_variant\_7.png: transparent-background Morbid Temptations presentation assets.

- .vscode/settings.json: project-local workspace settings were included in the latest accepted commit scope from the presentation pass.
- cinerific\_PROJECT\_SNAPSHOT.txt: refreshed generated project snapshot after the accepted presentation work and again during this worklog artifact pass.
- screenshots/home\_presentation\_stack\_bottom\_triple.png and screenshots/home\_presentation\_stack\_bottom\_triple\_next.png: AVD validation captures used to confirm the final Light As Air and Morbid Temptations stack placement.
- cinerific\_worklog\_july 22.pdf: this generated daily worklog artifact at the repository root.

#### Follow-Up Context

- The Home hero presentation overlay now treats title, description, and genre as a combined visible stack. Future placement tuning should keep that measurement model instead of anchoring from the title-only top line or the invisible exported frame.
- The body description and genre lines are implemented as Compose text for reliability. If exact Figma font assets become available later, those text layers can be moved from system SansSerif toward the true prototype typography.
- The title line still uses the original PNG band, which preserves the custom artwork look. If vector/title font sources become available, a later pass could replace the band draw with fully native text while retaining the current timing and placement logic.
- The safe-bottom logic was validated against the current tablet AVD taskbar. Additional emulator profiles or physical devices may need small bottom-padding checks if their system-bar geometry differs.
- Generated screenshots and worklog PDFs remain subject to the project ignore policy unless explicitly force-added, while the accepted source state described here is already committed and aligned with origin/main at HEAD 80c4bf3.
- The next worklog should continue from HEAD 80c4bf3 unless new source commits are added before the next session.

#### Output Artifact

- Filename: cinerific\_worklog\_july 22.pdf
- Created at the repository root in /Users/prahlin/gh/cinerific.
- Follows the Cinerific filename convention established by cinerific\_worklog\_july 12.pdf and continued by the July 14, July 15, July 16, July 18, July 19, July 20, and July 22 artifacts, including the space before the day number.
- Follows the established Alla Vostra/Prahlín/Cinerific daily worklog structure while keeping the body content specific to the current Cinerific work now present on main.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: cinerific\_worklog\_july 22.pdf.
