

Cinerific Android App Work Log - July 23, 2026

Compiled summary for Thursday, July 23, 2026 - focus: continuing the post-July-22 Cinerific Home, catalog, Android chrome, and right-nav polish pass: darkening Android system UI defaults, refining the Home hero reel with a right-to-left clip slide and blended incoming edge, extracting exact first-frame card and hero stills for the four Home reel titles, inserting Light As Air, Infatuation, Into The Wild, and Morbid Temptations into Home/default, Movies, Shows, and detail surfaces with the requested genre logic, studying the Figma Animations (Original) Right Nav Bar - Default component, importing Variant 5 as the shared right-side rail background, creating two extra black/purple mockup variations, validating the result on the Cinerific tablet AVD, and generating the latest Cinerific daily worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, and July 22: compact opening summary, source-material review, baseline state, goal list, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the current source state on main through HEAD 7062c98, plus the refreshed snapshot from this worklog pass, and follows the prior root-level naming, four-page letter layout, footer convention, and plain-text-readable PDF style.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, and July 22.
- Used pdftotext and pdftinfo output from the prior PDFs to preserve the established title pattern, summary cadence, section order, validation language, file-list style, letter-size geometry, metadata, footer, and four-page shape.
- Ran ./read_project.sh and reviewed the refreshed cinerific_PROJECT_SNAPSHOT.txt for the current Android source layout, drawable inventory, right-nav assets, hero reel resources, screenshot awareness, and scanner convention.
- Reviewed git status, git log, git show --stat, and focused diffs for July 23 commits f1ddd09 and 7062c98, with context from the July 21 and July 22 hero, title-card, spinner, favorites, and presentation-overlay work.
- Reviewed MainActivity.kt, Theme.kt, CinerificHomeScreen.kt, CinerificDestinationScreen.kt, CinerificChrome.kt, localized strings, and the drawable-nodpi assets added for system chrome, hero cards, hero images, and right-nav backgrounds.
- Reviewed the Figma Animations (Original) context for Right Nav Bar - Default, focusing on Variant 5 as the accepted black/purple visual source for the right-side navigation rail.
- Reviewed asset metadata for the new PNG rail backgrounds and WebP title assets. The rail backgrounds are 116 by 834 PNGs; the title cards are 700 by 526 WebPs; the title heroes are 1194 by 834 WebPs.
- Reviewed Android runtime evidence from emulator-5554: Gradle assemble/install output, adb launch of com.prahlincinerific.MainActivity, Guest profile entry, and the final Home/default screenshot state.

Baseline Status Before July 23 Work

- Cinerific entered July 23 with the July 22 Home hero presentation overlay accepted: transparent, staggered, bottom-left anchored, and visible above the tablet safe-bottom area.
- The Android tablet navigation/taskbar area still read brighter than the rest of the app. The user asked whether users must see it and then asked for a code-side dark treatment that better matched Cinerific.
- The Home hero reel rotated through four clips, but clip changes were still abrupt. The user wanted the next clip to slide in from the right and blend into the outgoing footage.
- The four hero-reel titles had presentation overlays, but their exact starting video frames had not yet become reusable catalog card and hero artwork.
- Home/default, Movies, Shows, and detail surfaces did not yet treat Light As Air, Infatuation, Into The Wild, and Morbid Temptations as normal catalog entries with card art, hero art, metadata, strings, and genre placement.
- The right-side navigation rail was functional but visually plain. The user wanted the Figma Variant 5 black/purple rail image implemented instead of a flat dark column.

Main Goals for July 23

- Darken Android system UI defaults so the tablet navigation bar, divider, and app theme better match Cinerific.
- Keep the Cinerific_Standard_Tablet AVD usable in landscape and return the installed app to Home/default for live validation.

- Replace hard Home reel cuts with a smooth right-to-left incoming clip slide near the end of each hero video.
- Blend the incoming clip left edge against the outgoing clip to soften strong color and lighting differences.
- Extract the exact first frames from the four repo video clips outside the app UI, without presentation overlays, system bars, logo, or rail chrome.
- Create card-ratio and hero-ratio still assets for Light As Air, Infatuation, Into The Wild, and Morbid Temptations using the same dimensions as the existing Cinerific catalog artwork.
- Place the four titles according to the requested logic: Light As Air as a documentary show, Infatuation as a drama show, Into The Wild as a documentary show, and Morbid Temptations as a thriller movie.
- Import Figma Variant 5 into the repo, create two additional black/purple variations, and make Variant 5 the shared right-rail background for expanded Home plus Movies, Shows, Favorites, and Settings.

Work Completed - Android System UI and AVD Runtime

- Explained that real Android tablet users may see gesture, taskbar, or navigation UI depending on device, Android version, launcher mode, and user settings, while the app can request darker system-bar styling.
- Updated MainActivity.kt so Android 12+ requests MODE_NIGHT_YES through UiModeManager during startup and applies dark edge-to-edge status/navigation bar styles.
- Changed the app navigation bar to black, set the navigation divider to black on supported Android versions, and forced WindowCompat light-status/light-navigation appearances off.
- Changed CinerificTheme from the old light Material color scheme to the dark Material color scheme.
- Added dark system-bar fallbacks to values/themes.xml, values-night/themes.xml, and values-v31/themes.xml, including black navigationBarColor, transparent statusBarColor, false light-system-bar flags, black divider color, and disabled navigation-bar contrast enforcement.
- Booted the Cinerific_Standard_Tablet AVD in landscape, confirmed emulator-5554 was attached, installed the debug APK, launched MainActivity, tapped Guest, and landed on the Home/default hero screen.

Work Completed - Hero Reel Clip Transitions

- Refactored LoopingHeroVideoView in CinerificHomeScreen.kt from a single TextureView/player path into active and incoming video slots so the next clip can be prepared before the visible transition.
- Added scheduling logic that starts the incoming transition near the end of the active clip using the player duration and current position.
- Implemented a right-to-left ValueAnimator slide with a 700 ms duration and DecelerateInterpolator, moving the incoming video layer from the right edge into the full-frame position.
- Added queued-transition handling so the next clip waits for preparation instead of interrupting through an unprepared surface.
- Added BlendedVideoLayer around each TextureView and used a destination-in LinearGradient edge mask to fade the incoming leading edge against the outgoing clip.
- Set the incoming edge blend to 16 percent of the hero reel width, preserving content while softening bright-to-dark or dark-to-bright boundaries.
- Preserved center-crop transforms, active reel index reporting for the presentation overlay, and MediaPlayer/surface cleanup on detachment.

Work Completed - Reel Frame Assets and Catalog Placement

- Captured the first visual frame from each of the four Home hero reel clips as repo-side source imagery rather than app screenshots, avoiding overlay text, the Cinerific logo, native bars, and right-side rail chrome.
- Created reference screenshots under screenshots/hero_reel_first_frames for card and hero starts of home_hero_reel_01 Light As Air, home_hero_reel_02 Infatuation, home_hero_reel_03 Into The Wild, and home_hero_reel_04 Morbid Temptations.
- Generated drawable-nodpi WebP card assets at 700 by 526: light_as_air_card.webp, infatuation_card.webp, into_the_wild_card.webp, and morbid_temptations_card.webp.
- Generated drawable-nodpi WebP hero assets at 1194 by 834: light_as_air_hero.webp, infatuation_hero.webp, into_the_wild_hero.webp, and morbid_temptations_hero.webp.
- Kept cards in the existing rounded-card rendering path while detail screens use the larger hero artwork when a title opens.
- Added Home card title mappings so the four new card resources resolve to the correct program titles.

- Inserted Morbid Temptations into the Home Thriller row and Movies Thriller row as a movie, matching the requested movie/thriller classification.
- Inserted Light As Air and Into The Wild into the Home Documentary row and Shows Documentary row as documentary shows.
- Inserted Infatuation into the Home Drama row and Shows Drama row as a drama show.
- Added the new titles to prototype list and small-collage ordering so Movies and Shows mode views can surface them consistently with the existing nested viewport navigation states.

Work Completed - Program Details and Localization

- Added ProgramDetails entries for the four titles, including year/runtime metadata, directors, producers, ratings, synopsis resource IDs, and genre labels.
- Added list-poster and detail-hero drawable resolution paths so title-detail screens can use the new cards and heroes through the same generic detail surface as the existing catalog.
- Added English, Spanish, and Mandarin string resources for the four program names and synopses so the new entries participate in the bundled localization path.
- Preserved the existing actionability pattern for title cards: catalog cards remain rounded when shown as cards, then use the matching hero asset inside the full-screen title experience.

Work Completed - Figma Variant 5 Right Nav Rail

- Studied the Figma Animations (Original) section and the Right Nav Bar - Default component for the rail visual reference, focusing on Variant 5.
- Imported the Figma-derived Variant 5 rail background into drawable-nodpi as chrome_nav_bgfill_figma_variant5.png at 116 by 834.
- Created two additional black/purple variation mockups, chrome_nav_bgfill_variant_lift.png and chrome_nav_bgfill_variant_nocturne.png, preserving the same dimensions while changing lighting and structure.
- Changed the shared CinerificChromeBackground default backgroundResId to chrome_nav_bgfill_figma_variant5 so the right rail automatically uses Variant 5 wherever the shared chrome background is used.
- Preserved separate top-bar chrome by continuing to pass chrome_top_bgfill explicitly from DestinationTopBar.
- Kept native rail icons and labels separate from the background image so Home, Movies, Shows, Favorites, and Settings continue to render interactive navigation on top of the black/purple rail texture.

Work Completed - Commits and Handoff

- Created commit f1ddd09, Darkened Android System UI Defaults, covering the dark navigation bar, dark theme, system-bar appearance flags, and theme-resource fallbacks.
- Created commit 7062c98, Implemented Figma Variant 5 Nav Rail Styling, covering Variant 5 rail styling, alternate mockups, hero reel transition work, four new title card/hero pairs, catalog/detail integration, and localized strings.
- Recommended past-tense commit-message wording when asked, keeping the header and dashed change lines aligned with the user-preferred format.
- Installed and launched the accepted debug build on the Cinerific AVD after Variant 5 was wired in, then moved through Guest profile selection so the user could see Home/default live.

Validation and Checks Performed

- Ran ./read_project.sh before this artifact pass, producing a refreshed cinerific_PROJECT_SNAPSHOT.txt with the current file tree, drawable assets, and source context.
- Ran ./gradlew :app:assembleDebug after reviewing the current source state; the debug build completed successfully with BUILD SUCCESSFUL in 7 seconds.
- Confirmed adb devices reports emulator-5554 attached as a device, matching the Cinerific_Standard_Tablet runtime used for implementation and user validation.
- Installed and launched the debug APK during the Variant 5 handoff. Android reported com.prahlincinerific.MainActivity as the focused foreground window after Guest was selected.
- Captured and inspected the live emulator screenshot after Guest selection; the app showed the Cinerific Home/default hero screen rather than Android launcher or an empty emulator.
- Ran git show --stat and focused diffs for f1ddd09 and 7062c98 to confirm the July 23 source scope.
- Ran file checks on the new PNG and WebP resources to confirm the rail, card, and hero dimensions match the intended app surfaces.
- Ran git status --short --branch before generating this artifact. The branch was main tracking origin/main, with only cinerific_PROJECT_SNAPSHOT.txt modified by the fresh read_project.sh

run before this new PDF was written.

- Read all pre-existing Cinerific worklog PDFs before producing this artifact so the new July 23 worklog follows the established naming, structure, length, and content type.

Files Touched During July 23

- app/src/main/java/com/prahlin/cinerific/MainActivity.kt: requested app night mode, applied black navigation/divider colors, transparent status bar, and dark system-bar appearance flags.
- app/src/main/java/com/prahlin/cinerific/ui/theme/Theme.kt: switched the app from the previous light Material color scheme to the dark color scheme.
- app/src/main/res/values/themes.xml, values-night/themes.xml, and values-v31/themes.xml: added dark system-bar and contrast fallback attributes.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt: added dual video slots, preloading, right-to-left slide transitions, leading-edge blending, Home card mapping, and new row placement.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt: added program details, prototype ordering, Movies/Shows rows, list poster resolution, detail hero resolution, and title resource mapping for the four new titles.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificChrome.kt: changed the shared right-rail chrome background default to chrome_nav_bgfill_figma_variant5.
- app/src/main/res/drawable-nodpi/chrome_nav_bgfill_figma_variant5.png, chrome_nav_bgfill_variant_lift.png, and chrome_nav_bgfill_variant_nocturne.png: added the accepted rail background and two alternate black/purple mockups.
- app/src/main/res/drawable-nodpi/light_as_air_card.webp, light_as_air_hero.webp, infatuation_card.webp, infatuation_hero.webp, into_the_wild_card.webp, into_the_wild_hero.webp, morbid_temptations_card.webp, and morbid_temptations_hero.webp: added first-frame title stills.
- app/src/main/res/values/strings.xml, values-es/strings.xml, and values-zh-rCN/strings.xml: added localized names and synopses for the four new titles.
- cinerific_PROJECT_SNAPSHOT.txt: refreshed generated project snapshot during this worklog pass.
- cinerific_worklog_july 23.pdf: this generated daily worklog artifact at the repository root.

Follow-Up Context

- The right-side rail now uses the Figma-derived Variant 5 background by default. The two alternate rail mockups are available for later comparison but are inactive unless the shared background resource changes.
- The Home hero reel transition now depends on a native TextureView/player slot swap and edge-mask draw path. Future tuning should use actual device or emulator frame data.
- The four reel-derived titles now behave like normal catalog entries. Future additions should follow the same card/hero dimensions, string-resource mapping, row placement, and detail-hero resolution pattern.
- The Android tablet taskbar/navigation area can be darkened by the app, but whether it appears remains partly controlled by the Android device, launcher, gesture mode, and user settings.
- Generated screenshots, PDFs, and snapshots remain project-management artifacts unless explicitly committed. The accepted July 23 source state is already on main through HEAD 7062c98.

Output Artifact

- Filename: cinerific_worklog_july 23.pdf
- Created at the repository root in /Users/prahlin/gh/cinerific.
- Follows the Cinerific filename convention established by cinerific_worklog_july 12.pdf and continued by the July 14, July 15, July 16, July 18, July 19, July 20, and July 22 artifacts, including the space before the day number.
- Follows the established Alla Vostra/Prahlín/Cinerific daily worklog structure while keeping the body content specific to Cinerific work completed on Thursday, July 23, 2026.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: cinerific_worklog_july 23.pdf.
