

Cinerific Android App Work Log - October 1, 2026 (U.S. EST)

Compiled summary for Thursday, October 1, 2026 (U.S. Eastern Time) - focus: extending Movies and Shows selection feedback across every view mode, completing responsive favorite-status toasts, repairing tablet Welcome interactions and avatar performance, restoring the emulator runtime, and unifying sign-out behavior across Settings and the Home back action.

Generated in continuity with the established Cinerific worklog cadence from July 12 through September 29 Part 2: compact opening summary, source-material review, baseline state, goals, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. No October 1 PDF existed before this pass, so this artifact uses the first-log-of-the-day filename without a part suffix. Eastern time was verified as Thursday, October 1, 2026 in EDT, UTC-04:00; the title retains the historical U.S. EST label. This report records work through HEAD d7f1701 plus the refreshed project snapshot generated during this documentation pass.

Source Materials Reviewed

- Reviewed all 30 pre-existing Cinerific worklog PDFs at the repository root, spanning July 12 through September 29 Part 2 and including each prior same-day Part 1 or Part 2 artifact.
- Extracted the complete 30-document corpus with pdftotext, checked every artifact with pdffinfo and pdffonts, and compared its naming, metadata, typography, page geometry, section cadence, technical density, and closing conventions.
- Confirmed every prior Cinerific worklog uses four U.S.-Letter pages. The latest convention uses Helvetica, PDF 1.4, extractable text, a repeated page title, a right-aligned page footer, and OpenAI Codex authoring metadata.
- Read the September 29 Part 2 report in full as the direct baseline so this worklog covers only the later October 1 catalog, favorite-feedback, Welcome, emulator, and sign-out sessions.
- Ran read_project.sh and reviewed the complete refreshed cinerific_PROJECT_SNAPSHOT.txt, repository tree, current source, string resources, tooling, binary inventory, Git state, and commit range 823a1cf..d7f1701.
- Reviewed commits c20eaa2, b75c5b1, and d7f1701 with their full messages, statistics, source diffs, and affected files rather than relying only on the final working tree.
- Reviewed runtime evidence from the connected Samsung phone and Standard tablet emulator, including portrait and landscape captures, touch failures, ANR behavior, rotation state, cold-boot recovery, and the accepted final layouts.

Baseline Status Before October 1 Work

- Movies and Shows displayed a blinking selection border only in List view; equivalent title cards in the other supported view modes did not show which item nearest the viewport center was active.
- The Shows Documentary heading could crowd or clip its second line, and the portrait-phone Favorites profile card still used the earlier 84 percent black surface.
- Tapping the hero star changed favorite state without the requested branded confirmation. No paired removal message, responsive sizing, fixed right edge, or scroll-independent placement existed.
- Tablet Welcome navigation became intermittently unresponsive or routed avatar taps to the wrong authentication screen while expensive bitmap preprocessing produced freezes and ANR symptoms.
- Settings Sign out bypassed the guarded Home back-button flow instead of sharing its confirmation dialog, continuous spinner, two-second timing, and return to Welcome.

Main Goals for October 1

- Carry the blinking selected-card treatment through all Movies and Shows view modes, orientations, and form factors without changing accepted navigation or card artwork.
- Add a polished, localized favorite-status toast below the hero star and make it reliable on every supported viewport for both add and remove actions.
- Restore responsive, correctly routed Welcome interactions on the tablet emulator while preserving the accepted avatar appearance and phone behavior.
- Make every user-initiated sign-out use one guarded confirmation and loading transition, then validate the complete October 1 source at the repository head.

Cinerific Android App Work Log - October 1, 2026 (U.S. EST)

Work Completed - Catalog Selection Across Every View Mode

- Extended the existing animated selection-stroke alpha from List view into every alternate Movies and Shows presentation instead of maintaining view-specific visual behavior.
- Tracked the root-space center of each visible collage card and selected the program nearest the viewport center, matching the active-card semantics already established by the list presentation.
- Applied the clear inner stroke, purple outer stroke, corner radius, and blinking alpha to compact cards and the larger collage treatment while preserving the underlying artwork.
- Filtered center tracking to the programs currently visible for the selected genre and mode, with a deterministic first-visible fallback before geometry measurements settle.
- Threaded selection state and frame scale through the shared compact-card and collage-card composables so phone, tablet, portrait, and landscape branches use one responsive implementation.
- Kept List view behavior intact and avoided changing title selection, program-detail navigation, genre filtering, or the three established view-mode controls.
- Built and reviewed the shared result across Movies and Shows rather than limiting the correction to the initially reported screen or device.

Work Completed - Shows Heading and Favorites Surface

- Added an explicit 44sp line height to the Documentary heading on the Shows screen so Documentary and Shows no longer clip into one another.
- Reduced the first spacing revision after visual review, retaining enough separation to prevent clipping without leaving an oversized gap.
- Passed the line-height override through each relevant responsive catalog composition and left other genre labels on their existing typography.
- Raised the signed-in username parent surface on portrait phones from 84 percent to 90 percent black opacity, improving separation while leaving tablet and landscape Settings geometry unchanged.

Work Completed - Favorite Toast Design and Placement

- Implemented the selected dark black-purple banner treatment beneath the actionable top-right hero star, using a rounded container, purple gradient border, soft shadow, circular star badge, and bold app-family text.
- Added a 2.4-second visibility window with coordinated fade and short vertical slide enter/exit animations, keeping the feedback visible long enough to read without interrupting playback or navigation.
- Triggered the banner directly from the hero favorite control and restarted its timing cleanly on subsequent taps by using an explicit request counter.
- Added the text Added to Favorites! as an Android string resource and supplied Spanish and Simplified Chinese translations alongside the English default.
- Positioned the toast immediately below the hero star rather than using a generic screen-bottom snackbar, preserving the requested causal relationship between action and feedback.
- Scaled the banner, icon container, star icon, padding, gap, radius, border, and typography through the destination-screen design coordinate system.
- Preserved the existing star bounce and radial burst, but corrected the layering and state-change bookkeeping so those effects remain synchronized with favorite state.

Work Completed - Responsive Toast Correction

- Diagnosed the first implementation in which the toast collapsed to an icon-sized box and clipped its label on multiple devices and orientations.
- Assigned explicit responsive width and height, kept the message on one line, and scaled phone-portrait presentation separately so the complete banner and font remain visible.
- Verified that the fix retained the selected art direction and animation instead of replacing the toast with a platform-default notification.

Cinerific Android App Work Log - October 1, 2026 (U.S. EST)

Work Completed - Paired Favorite Removal Feedback

- Added the matching Removed from Favorites! state with the same container artwork, star badge, placement, timing, entrance, and exit motion as the add confirmation.
- Selected the message before toggling state so each hero-star tap reports the action being performed rather than the stale or resulting Boolean value.
- Added equivalent Spanish and Simplified Chinese removal strings and reused the same parameterized FavoriteStatusToast composable for both directions.
- Anchored the toast container with TopEnd alignment and no trailing inset so its right edge meets the application screen edge on phones and tablets in portrait and landscape.
- Hoisted toast presentation out of the vertically scrolling detail content, keeping it visually fixed below the hero star until its 2.4-second dismissal even when the user scrolls.
- Kept the toast independent of hero media playback, title rating, detail navigation, and the persistent favorite collection itself.

Work Completed - Tablet Welcome Responsiveness

- Traced tablet freezes and nonresponsive taps to synchronous avatar-layer preprocessing performed while CinerificIntroView was constructed, including repeated large bitmap allocation and pixel work.
- Removed the precomputed avatar carousel-layer pipeline and its expensive transformed bitmap variants, cutting 110 lines of costly setup and eliminating the historical multi-gigabyte allocation pattern behind ANR behavior.
- Rendered the original avatar bitmaps directly through the existing circular clipping path, preserving the accepted bubble appearance while simplifying the carousel to the assets already in memory.
- Made the custom Welcome view own the complete touch gesture from ACTION_DOWN onward so a slightly imprecise initial press cannot cause the AndroidView parent to cancel a later valid release.
- Resolved Create My Account, Sign In, and Forgot Password from the release position after touch-slop validation instead of requiring fragile pressed-state agreement throughout the gesture.
- Resolved avatar navigation from the profile beneath the release point, preventing Steve and the other identities from falling through to an adjacent account link or stale target.
- Expanded portrait account-link hit regions without moving the visible labels, icons, name art, avatar, or accepted icon-to-label spacing.
- Returned handled status consistently for cancel and terminal touch cases, stabilizing gesture ownership in both tablet portrait and tablet landscape.
- Preserved swipe-based profile selection by keeping touch-slop and carousel-movement guards around navigation.

Work Completed - Emulator and Rotation Recovery

- Separated source regressions from emulator state by repeatedly installing and launching the rebuilt APK while checking both portrait and landscape tablet behavior.
- Restored accelerometer-driven rotation and free user-rotation mode so tilting the tablet emulator once again changes orientation rather than remaining locked.
- Cold-booted the Standard tablet AVD after warm restarts continued to reproduce stale input/display behavior, clearing the unresponsive Welcome state that survived app reinstalls.
- Removed the disposable oversized Quick Boot snapshot during recovery, freeing constrained host storage while retaining the configured AVD and project-owned skin.
- Confirmed the final tablet Welcome screen remained visually aligned with the app design after responsiveness returned, rather than accepting the temporary navigation-only layout seen during diagnosis.

Runtime Outcome

- Avatar taps now enter the signed-in experience for the selected character, all three Welcome links open their corresponding authentication screens, and both portrait and landscape respond normally after the cold boot.
- The physical phone remained the portrait reference while the Standard tablet emulator remained the cross-form-factor and rotation regression target.

Cinerific Android App Work Log - October 1, 2026 (U.S. EST)

Work Completed - Unified Sign-Out Flow

- Centralized sign-out requests in CinerificApp so Settings and the Home/default-screen Back action enter the same guarded confirmation state.
- Changed the Settings Sign out callback from immediate account removal to the shared requestSignOut path, preserving the user confirmation step globally.
- Centralized confirmation handling in confirmSignOut, preventing duplicate requests, hiding the dialog, starting the shared loading state, waiting the established two seconds, and then clearing the signed-in session.
- Reused the existing popup copy, red-star spinner, continuous animation, timing, and return-to-Welcome navigation instead of creating a second Settings-specific transition.
- Kept Back disabled while sign-out is in progress and retained dismissal behavior while the confirmation dialog is open.

Validation and Checks Performed

- Verified the current project date and time zone as Thursday, October 1, 2026 in America/New_York, with daylight-saving offset EDT, UTC-04:00, before selecting the filename and report date.
- Ran `./gradlew :app:assembleDebug` against HEAD d7f1701; all 35 tasks completed and the build finished successfully under the existing Gradle 8.7 configuration.
- Ran source-only git diff --check and found no whitespace errors in app/src. The generated line-numbered snapshot retains pre-existing trailing whitespace inherited from printed source lines.
- Confirmed main and origin/main both resolve to d7f1701 and that the source tree was clean before the documentation snapshot was mechanically refreshed.
- Confirmed the generated debug APK exists at `app/build/outputs/apk/debug/app-debug.apk` and reflects the accepted October 1 source.
- Reviewed all three October 1 commits in chronological order and compared their combined seven-file delta against the September 29 Part 2 worklog commit.
- Ran `read_project.sh` immediately before generation; `cinerific_PROJECT_SNAPSHOT.txt` now records the final source, repository tree, tools, and binary inventory for this handoff.
- Validated this PDF after generation with `pdftinfo`, `pdffonts`, `pdftotext`, four-page rendering, and visual inspection for page count, Letter geometry, metadata, extractable text, footer continuity, clipping, and section order.

Files Touched During October 1

- `app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt` - expanded catalog selection borders, adjusted Shows heading line height and Favorites opacity, and implemented responsive add/remove favorite toasts.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt` - removed expensive avatar preprocessing and stabilized Welcome avatar/link gesture ownership and routing.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt` - centralized sign-out request and confirmation behavior across Settings and Home Back.
- `app/src/main/res/values/strings.xml`, `values-es/strings.xml`, and `values-zh-rCN/strings.xml` - added localized favorite-added and favorite-removed feedback.
- `cinerific_PROJECT_SNAPSHOT.txt` - refreshed the generated full-project handoff after all October 1 source commits.
- `cinerific_worklog_october 1.pdf` - added this first October 1 session artifact at the repository root.

Follow-Up Context

- Favorite feedback is intentionally attached to the detail hero and fixed to the screen, not to its scroll content; future layout work should preserve TopEnd anchoring and the direct placement below the star.
- The add and remove states share one visual component. Changes to duration, animation, size, or palette should normally remain symmetrical unless a new product distinction is requested.
- Welcome avatar performance now depends on direct source-bitmap rendering and circular clipping. Reintroducing eager per-avatar bitmap transforms would risk restoring the tablet allocation and ANR problem.
- The Standard tablet emulator may require a true cold boot when stale Quick Boot state survives APK replacement; source changes should not be inferred solely from a corrupted warm-boot session.
- All explicit sign-out affordances should continue to call the shared request path so confirmation, spinner continuity, timing, and Welcome navigation do not diverge again.

Output Artifact

- Created `/Users/prahlin/gh/cinerific/cinerific_worklog_october 1.pdf` using the established lowercase filename and month/day spacing, without a part suffix because no earlier October 1 worklog existed.
- Kept the established four-page U.S.-Letter structure, Helvetica typography, compact technical density, repeated title, right-aligned footer, PDF 1.4 compatibility, and extractable text.
- Scoped the report to work completed after September 29 Part 2 and recorded the final accepted behavior while retaining important emulator recovery and validation context.
- No source-code changes or new application commit were created by this documentation pass; the refreshed snapshot and PDF remain ready for review and the next commit.
