

Cinerific Android App Work Log - July 25, 2026

Compiled summary for Saturday, July 25, 2026 - focus: extending Cinerific tablet coverage with small/wide and large/narrow AVD targets, clipping the Home/default hero reel responsively across tablet aspect ratios, stabilizing the detail hero spinner animation with a normalized red-star asset, suppressing favorite prompts during loading states, carrying Cinerific logo behavior into every detail hero, adopting Manrope across app content text, refining the 25% detail info panel with anchored margins and a black-to-transparent gradient, wiring Home card taps to scroll back to the active hero and load the matching hero reel, validating current source through Gradle and AVD installs, refreshing the project snapshot, and generating the latest Cinerific daily worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, and July 24: compact opening summary, source-material review, baseline state, goal list, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the current source state on main through HEAD 9403ce5, plus the refreshed snapshot from this worklog pass, and follows the prior root-level naming, four-page letter layout, footer convention, metadata, and plain-text-readable PDF style.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, and July 24.
- Used pdftinfo and pdftotext output from the prior PDFs to preserve the established title pattern, summary cadence, section order, validation language, file-list style, letter-size geometry, four-page shape, metadata, footer, and text-extractable layout.
- Ran ./read_project.sh and reviewed the refreshed cinerific_PROJECT_SNAPSHOT.txt for the current Android source layout, resource inventory, worklog inventory, AVD-aware screenshot folders, generated-file policy, and scanner convention.
- Reviewed git status, git log, git show --stat, and the July 25 commit sequence: 8c22f39, 0221525, 9284f91, and 9403ce5, with context from the July 24 worklog commit 4c08fb5 and source commit 6848ccb.
- Reviewed CinerificHomeScreen.kt, CinerificDestinationScreen.kt, CinerificLoadingSpinner.kt, CinerificApp.kt, HeroPresentationTextAnimation.kt, CinerificTextFonts.kt, requirements-dev.txt, .gitignore, and the new font, raw preview, and spinner drawable assets.
- Reviewed local AVD inventory and config.ini values for Cinerific_Standard_Tablet, Cinerific_Small_Wide_Tab_A9, and Cinerific_Large_Narrow_OnePlus_Pad_3 to record the responsive-testing device profile work from this pass.
- Reviewed Gradle assemble/install output and adb/emulator evidence from the accepted debug APK runs used while testing Home hero behavior, detail hero loading, and 25% info-panel layout changes.
- Reviewed user feedback from the July 25 appearance/responsivity pass, including requests about tablet aspect-ratio coverage, hero clipping, spinner wobble/stutter, favorite prompt suppression, Manrope typography, detail panel opacity, star-stack placement, and Home card autoscroll behavior.

Baseline Status Before July 25 Work

- Cinerific entered July 25 with the July 24 destination top-banner chrome accepted, the right-side rail using the Figma Variant 5 treatment, and detail hero imagery set to proportional crop behavior rather than stretching.
- The primary Cinerific tablet AVD was still the Pixel Tablet-style Cinerific_Standard_Tablet at 2560 by 1600, approximately 16:10, but the real-world tablet pool needed smaller/wider and larger/squarer coverage for appearance testing.
- The Home/default hero reel presentation stack was accepted in broad placement terms, but large/narrow and small/wide tablet shapes exposed vertical gap and bottom-padding differences that needed responsive clipping.
- The detail hero loading path had the correct concept - darkened screen plus Cinerific spinner - but the red star variants made the spinner wobble or stutter when individual parts rotated inconsistently.
- Favorite-star prompt UI could still appear during the loading spinner state, which conflicted with the intended darkened playback-loading mode.
- The detail hero info area was still evolving from a gray or mismatched box toward a more cinematic 25% black treatment with proper transparency, gradient fade, anchored margins, and tablet-readable typography.
- Home hero reels could navigate to detail, but Home/default card taps did not yet provide

the requested scroll-back-to-top and matching-hero-loading behavior for hero-backed titles.

Main Goals for July 25

- Establish a practical three-AVD tablet test set that approximates small/wide, standard, and large/narrow Android tablet shapes.
- Make Home/default hero reel clipping and presentation-stack bottom-left padding respond consistently across all three tablet targets.
- Repair the loading spinner so one centered normalized red-star asset rotates smoothly while the white wheel rotates in place, avoiding wobble, stutter, or point-distance drift.
- Ensure the darkened spinner loading state hides favorite prompt UI and transport controls, while keeping the Cinerific logo visible where requested.
- Apply Manrope to content text across the app without changing active navigation, nav rails, icons, logos, or chrome-specific assets.
- Refine the detail hero 25% info box: black fill, midpoint fade to transparent, anchored left/right margins, larger title/meta text, balanced columns, star stack placement, and responsive minimum height.
- Make Home/default card taps scroll vertically to the top and load the matching hero reel, including the correct video clip and title/copy animation.

Work Completed - Tablet AVD Coverage and Hero Responsivity

- Identified the existing Cinerific_Standard_Tablet as a Google Pixel Tablet-style target with 2560 by 1600 pixels, 16:10 aspect ratio, and an approximately 10.95 inch tablet-class screen.
- Researched the useful Android tablet market range for the app and recommended a small/wide Samsung Tab A9-style target and a large/narrow-ish OnePlus Pad 3-style target to complement the existing Pixel Tablet-style AVD.
- Added Cinerific_Small_Wide_Tab_A9 as an 8.7 inch, 1340 by 800, approximately 1.675:1 small/wide test target for cramped tablet layouts.
- Added Cinerific_Large_Narrow_OnePlus_Pad_3 as a 13.2 inch, 3392 by 2400, approximately 1.413:1 large/squarer tablet target for excess vertical space and narrow-ish landscape composition checks.
- Compared the three AVD profiles during the appearance/responsivity pass so Cinerific could test small/wide, standard, and large/narrow hero and detail layouts rather than assuming one Pixel Tablet shape represented the user pool.
- Implemented responsive Home hero clipping so the reel height is capped to the visible tablet viewport and excess video content is clipped instead of leaving awkward lower gaps after scroll.
- Anchored the Home presentation presets to the clipped hero bottom-left edge and preserved equal scaled left/bottom padding across the three AVD shapes.
- Verified the accepted responsive hero clipping in commit 8c22f39 with a passing debug build.

Work Completed - Detail Spinner and Loading Flow

- Installed Pillow-oriented development tooling for local asset analysis, added requirements-dev.txt, and ignored local Python/cache artifacts in .gitignore.
- Studied the loading spinner red-star variants and diagnosed the wobble/stutter source as variant-dependent point geometry and asset repositioning rather than the intended centered rotation.
- Created loading_spinner_red_star_normalized.png as one corrected centered red-star asset with the five outer points normalized to a stable radius.
- Reworked CinerificLoadingSpinner.kt so the normalized red-star asset rotates continuously as one centered layer, while the white wheel rotates in place instead of repositioning.
- Connected center play taps on detail heroes to the darkened spinner loading state and removed the visible prev/play/next transport stack during that loading interval.
- Kept idle detail transport controls vertically centered over the underlying hero across aspect ratios and dimensions.
- Darkened the screen during user-initiated play loading in the same visual language as the initial detail hero reveal.
- Suppressed any visible tap-star-to-favorite or tap-star-to-unfavorite prompt and hid the hero favorite star itself while the darkened loading/spinner state is active.

Work Completed - Detail Hero, Typography, and 25% Info Box

- Applied the Cinerific logo to every movie/show detail hero and kept it visible above the darkened spinner scrim so playback loading does not obscure the brand mark.

- Routed taps on Home hero reels to their matching detail titles, preserving the darkened reveal, spinner, and transport-control timing that detail heroes already use.
- Replaced mismatched gray background areas under detail hero images with transparent and then controlled black treatments, settling on a 25% black info-panel fill that fades downward to transparent.
- Tuned the fade several times, ending with the opacity drop starting at the vertical midpoint of the 25% box and a responsive minimum height so the gradient remains visible after the layout changed.
- Anchored the detail hero info-panel left and right margins to the same horizontal values used by the carousel genre header and right-facing chevron below.
- Made the 25% box title twice the size of the section headers below, then scaled the synopsis, runtime, genre, director, producer, and rating stars for stronger tablet readability.
- Installed Manrope as app content typography through CinerificTextFonts.kt and applied it across Home, destination, detail, favorites, settings, and prompt text while preserving nav bars, rails, icons, logos, and active navigation surfaces.
- Added a raw Manrope/Sora/Inter Sink or Swim paragraph preview asset after the user requested a visual font comparison inside the project.
- Rebalanced the 25% box asset row through the requested 50/20/30 distribution, left-aligning each column's text within its permitted horizontal space and boldening the center/right text stacks.
- Moved the five-star rating stack into the info box as the third row across columns 2 and 3, then centered it from the visible column-2 text start edge to the furthest visible column-3 text end edge rather than the invisible weighted columns.

Work Completed - Home Hero Routing and Scroll Behavior

- Changed Home/default card taps so hero-backed titles request the matching top hero reel instead of leaving the old movie/show hero visible after the screen scrolls upward.
- Lifted active Home reel state into CinerificHomeScreen.kt so card taps, the custom video view, the presentation overlay, and the hero tap-through target can stay synchronized.
- Added a Home title-to-hero mapping based on HeroPresentation.programTitle for Light As Air, Infatuation, Into The Wild, and Morbid Temptations.
- Extended LoopingHeroVideoView with a targeted showReel path so it can preload and slide in a requested reel, not only the next reel chosen by the automatic timer.
- Preserved the existing right-to-left slide and edge-blend visual when a card requests a specific reel, while restarting the title/copy presentation animation with a fresh play key.
- Prioritized tap-requested transitions over the old auto-advance timer so the user's selected hero wins even if the current clip is near completion.
- Repaired the Home autoscroll regression by moving scroll-to-top into a post-recomposition LaunchedEffect request, so the hero swap no longer cancels the vertical scroll animation.
- Added a detail-screen scroll reset when selecting a different program from detail carousel cards, preventing an updated hero from appearing while the viewport remains scrolled down in the library rows.

Validation and Checks Performed

- Ran ./read_project.sh before producing this artifact; it refreshed cinerific_PROJECT_SNAPSHOT.txt at the repository root with the current file tree and generated-worklog inventory.
- Ran pdfinfo and pdftotext against every pre-existing Cinerific worklog PDF to verify the prior four-page cadence, title metadata, footer convention, and extractable text style.
- Ran git status --short --branch, git log --oneline --decorate, git log --since 2026-07-25, git show --stat HEAD, git diff --stat 4c08fb5..HEAD, and git diff --name-status 4c08fb5..HEAD to verify the July 25 source scope.
- Ran ./gradlew :app:assembleDebug repeatedly during implementation and once more during this artifact pass; the current debug build completed successfully with BUILD SUCCESSFUL in 22 seconds.
- Installed accepted debug builds onto the connected Cinerific_Standard_Tablet AVD with ./gradlew :app:installDebug during the layout and routing passes.
- Relaunched com.prahlincinerific through adb force-stop and monkey after installs so the visible emulator used the freshly installed APK rather than a stale process.
- Used adb devices -l to confirm emulator-5554 was connected during this pass.
- Read local AVD config.ini values for Cinerific_Standard_Tablet, Cinerific_Small_Wide_Tab_A9, and Cinerific_Large_Narrow_OnePlus_Pad_3 to document the exact dimensions used for responsive testing.

- Reviewed live user feedback after AVD reboots, installs, and visual checks, then adjusted the implementation until the user confirmed the Home autoscroll, matching hero selection, and 25% info-panel visual behavior were acceptable.

Files Touched During July 25

- app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt: responsive hero clipping, shared scroll state, card-to-hero mapping, targeted reel selection, post-recomposition scroll-to-top requests, and custom video-view reel preloading/transition logic.
- app/src/main/java/com/prahlin/cinerific/ui/HeroPresentationTextAnimation.kt: presentation program-title mapping support and adjusted stack behavior tied to the clipped Home hero boundary.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificLoadingSpinner.kt: normalized star drawing/rotation behavior and smoother centered spinner animation.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt: detail hero loading suppression, spinner/transport behavior, logo persistence, detail scroll reset, 25% info-panel gradient, typography scale, anchored margins, column distribution, star placement, and synopsis sizing.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt: favorites-full prompt suppression during user-initiated playback loading.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificTextFonts.kt and app/src/main/res/font/manrope.ttf: Manrope content text family added and wired into the app's non-navigation text surfaces.
- app/src/main/res/drawable-nodpi/loading_spinner_red_star_normalized.png: added the corrected centered red-star spinner asset.
- app/src/main/res/raw/sink_or_swim_paragraph_fonts.png: added the requested paragraph font comparison preview asset.
- .gitignore and requirements-dev.txt: added local Python/Pillow development support while keeping cache artifacts out of source control.
- cinerific_PROJECT_SNAPSHOT.txt and cinerific_worklog_july 25.pdf: refreshed/generated project-management artifacts during this worklog pass.

Follow-Up Context

- The current three-tablet AVD set gives Cinerific a practical responsive-testing triangle, but the local avdmanager output still reports odd system-image labels for some profiles. If an AVD fails to boot later, inspect system image installation before changing app layout code.
- The Home hero targeted-reel path now depends on the custom dual-slot TextureView implementation. Future reel additions should update HeroPresentation order, HeroReelVideos order, and Home card title mapping together.
- The spinner now relies on one normalized red-star asset. Future spinner styling should preserve centered rotation and avoid variant-specific repositioning unless the geometry is re-normalized first.
- The 25% info panel has become an important detail-screen design contract: keep carousel-aligned margins, the midpoint fade, responsive minimum height, and measured star centering when adding new metadata rows.
- Manrope is now the content text family. Navigation rails, icons, logos, and active navigation controls were intentionally left outside that typography sweep and should remain separate unless explicitly requested.
- Generated screenshots, PDFs, and snapshots remain project-management artifacts unless explicitly committed. The accepted July 25 source state is on main through HEAD 9403ce5, while this PDF records the daily worklog state after the latest snapshot refresh.

Output Artifact

- Filename: cinerific_worklog_july 25.pdf
- Created at the repository root in /Users/prahlin/gh/cinerific.
- Follows the Cinerific filename convention established by cinerific_worklog_july 12.pdf and continued by the July 14, July 15, July 16, July 18, July 19, July 20, July 22, July 23, and July 24 artifacts, including the space before the day number.
- Follows the established Alla Vostra/Prahlín/Cinerific daily worklog structure while keeping the body content specific to Cinerific work completed on Saturday, July 25, 2026.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: cinerific_worklog_july 25.pdf.
