

Cinerific Android App Work Log - July 29, 2026 (U.S. EST)

Compiled summary for Wednesday, July 29, 2026 (U.S. EST) - focus: continuing the post-July-28 Create Account, Home/default, catalog, and detail-card interaction pass by reviewing the refreshed project snapshot and all prior Cinerific worklogs, restoring Martin's Create Account avatar hair stroke, adding active center-card stroke stacks across Home and list/detail card surfaces, converting horizontal rows into cyclical one-card snap carousels, adding vertical list snap behavior, making full carousel headers actionable, creating static title-only card art for the four Home hero-reel titles, routing those assets through every card surface, preventing those card taps from jumping back to the hero video reel, validating Kotlin compilation, committing the two July 29 source passes as 47bc4f4 and 19054a3, refreshing the project snapshot, and generating this latest Cinerific PDF worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, and July 28 Part 2: compact opening summary, source-material review, baseline state, goal list, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the current source state on main through HEAD 19054a3, plus the refreshed snapshot and generated worklog artifact from this July 29 pass, and follows the prior root-level naming, letter layout, footer convention, metadata, and plain-text-readable PDF style.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, and July 28 Part 2.
- Used pdftotext output from all prior PDFs to preserve the established title pattern, summary rhythm, source review style, section order, validation language, file-list style, follow-up close, output artifact phrasing, footer convention, and four-page daily-log shape.
- Used pdftinfo on prior PDFs, especially July 28 Part 1 and Part 2, to confirm the U.S. EST title precedent, letter page geometry, PDF 1.4 output, metadata fields, and Codex standard-library PDF generator naming.
- Ran ./read_project.sh and reviewed cinerific_PROJECT_SNAPSHOT.txt for the current source layout, drawable inventory, generated title-card mockups, ignored artifacts, worklog inventory, and scanner convention.
- Reviewed git status, git log, git show --stat, and git show --name-status around the July 29 commits 47bc4f4 and 19054a3.
- Reviewed CinerificIntroView.kt, CinerificHomeScreen.kt, CinerificDestinationScreen.kt, CinerificCircularCardCarousel.kt, .gitignore, the new drawable-nodpi title cards, and the generated mockup folders used to produce the card art.
- Reviewed Light As Air, Infatuation, Into The Wild, and Morbid Temptations card stills, hero stills, presentation variant PNGs, and HeroPresentationTextAnimation.kt constants before creating static title-only card assets.

Baseline Status Before July 29 Work

- Cinerific entered July 29 with the July 28 Part 2 mock Sign In and Create Account flows accepted, including dropdown controls, input dimming, landscape keyboard lift, and the Create Account avatar carousel.
- Martin's Create Account avatar still lost part of the border stroke along his dark brown hair because the character mask rejected dark saturated hair pixels.
- Home/default carousels used finite horizontal scrolling and had no selected center-card frame tied to the carousel nearest the screen's vertical center.
- Movies/Shows list mode did not yet share the same selected-card frame language around the combined landscape image and info box.
- Detail library rows still used ordinary finite horizontal scrolling instead of cyclical one-card snap carousel behavior.
- Carousel headers had separate title/chevron affordances rather than one full-width title-to-chevron navigation target.
- The four Home hero-reel titles had accepted card stills and animated presentation overlays, but their ordinary cards did not yet include the large custom title art.
- Home card taps for those four titles still switched the top hero video reel instead of opening the normal static card/detail surface.

Main Goals for July 29

- Preserve Martin's dark brown hair and matching hair-edge stroke on the Create Account avatar without disturbing the other avatar extraction paths.
- Add selected-card stroke stacks to the horizontally centered card in the carousel closest to the vertical center of Home/default.
- Tune the selected stroke to a 10 px invisible clear gap, 3 px right-rail-white visible stroke, and a continuous 67 percent to 50 percent opacity pulse.
- Make horizontal card rows cyclical from both directions and add subtle one-card snap resistance so drag/flip gestures do not accidentally skip cards.
- Apply the selected stroke system to Movies/Shows list cards as one landscape image-plus-info unit, with only the vertically centered list row selected at a time.
- Add vertical one-card snap behavior to list mode and matching selected-card frames to detail library carousels.
- Make the full carousel header span actionable while preserving the established nested Movies/Shows genre/mode route behavior.
- Create and route static title-only cards for the four hero-reel titles, then make those card taps behave like all other non-video-related cards.

Work Completed - Martin Avatar and Selected Strokes

- Updated Martin's Create Account avatar character extraction so `createAvatarCharacterBitmap` can opt into dark saturated pixels during mask generation.
- Threaded `includeDarkSaturatedPixels` through `createAvatarCharacterMask` and `isColorfulAvatarPixel`, preserving Martin's hair fill and hair-border stroke while leaving Steve and Janny on the default stricter mask path.
- Added Home selected-card frames outside the clipped card image, using a clear inner gap and visible outer stroke rather than resizing or shifting the card layout.
- Tuned the Home visible outer stroke down through the requested iterations to the final 3 px size and matched its color to the selected right-rail navigation white.
- Added `rememberCinerificSelectionStrokeAlpha` as a shared infinite pulse, settling the visible stroke at a subtle 67 percent to 50 percent opacity loop that does not restart when selection moves.
- Computed Home's active row from viewport center geometry and the active card from the row's centered visible item, with fallback selection so a center carousel never appears without a stroke.

Work Completed - Circular Carousels and Header Routing

- Added `CinerificCircularCardCarousel.kt` as a shared circular `LazyRow` helper with virtual `Int.MAX_VALUE` item space, modulo item mapping, midpoint initialization, and recentering near guard bands.
- Replaced finite `horizontalScroll` card rows in Home/default and detail library rows with `CinerificCircularCardRow`.
- Added one-card snap fling behavior based on visible item stride and velocity threshold, allowing a fling to settle only on the previous, current, or next card.
- Tuned the horizontal resistance to stay nearly invisible while preventing accidental skipped cards during left/right drag release.
- Made every horizontal carousel truly cyclical so dragging left of the first item brings in the last item, and dragging right of the last item brings in the first item.
- Made each Home carousel header row clickable across the whole horizontal span from genre title through chevron, reusing the existing nested Movies/Shows genre and mode route.

Work Completed - List Mode and Detail Library Selection

- Added a list-mode selected frame around the whole landscape row unit, including both the image and the visible information box.
- Restricted list-mode strokes to the single card row closest to the vertical center of the viewport, matching the one-active-stroke rule established for carousels.
- Doubled only the list-mode invisible inner clear stroke from 10 px to 20 px to avoid cramping around

the landscape card unit.

- Applied the same 3 px right-rail-white visible stroke and shared 67 percent to 50 percent opacity pulse to selected list rows and detail library cards.
- Tracked list row centers with `onGloballyPositioned` and `positionInRoot` so list selection follows the actual composed card geometry.
- Added `DestinationListVerticalSnapFlingBehavior` so upward/downward list flings settle one card at a time rather than coasting past nearby rows.
- Selected only the detail library carousel closest to the viewport center and only the centered card in that row, then gave detail library rows the same cyclical carousel behavior as Home.

Work Completed - Static Title-Only Hero-Reel Cards

- Created a title-only Light As Air card mockup from the existing 700 by 526 card still and the accepted presentation title/kite art, excluding the description and genre lines.
- Created matching title-only card mockups for Infatuation, Into The Wild, and Morbid Temptations, preserving their presentation title styling and decorative marks while excluding later copy bands.
- Imported the approved static PNGs into drawable-nodpi as `light_as_air_title_card`, `infatuation_title_card`, `into_the_wild_title_card`, and `morbid_temptations_title_card`.
- Updated `HomeProgramRows`, `homeProgramTitleForCard`, `MovieRows`, `ShowRows`, `listPosterDrawableId`, and generic card lookup paths so all card appearances for those titles use the new title-card assets.
- Updated `detailHeroDrawableId` so those four detail screens use the static title cards instead of the previous video-frame hero stills.
- Removed Home's special card-tap path that switched the top hero reel for those titles, making their cards navigate to normal details like other movie/show cards.
- Preserved the existing detail reveal, favorite button, play button, previous/next controls, and play-loading spinner behavior over the new static card heroes.

Work Completed - Validation, Snapshot, and Commit State

- Ran `./gradlew :app:compileDebugKotlin` during the July 29 source work after the selected-stroke tuning, list/detail selection work, title-card import/routing, and final static-detail routing.
- Visually inspected the generated title-only card mockups before copying the accepted versions into drawable-nodpi.
- Committed the Martin avatar, selected-stroke, circular carousel, list snap, and detail library work as 47bcaf4, Polished selected-card strokes and carousel cycling.
- Committed the static title-card asset import and hero-reel card routing work as 19054a3, Swapped hero-reel titles to static title cards.
- Updated `.gitignore` so the unrelated `.github/alla_vostra_worklog_july1.pdf` is ignored during Cinerific work, then confirmed it with `git check-ignore`.
- Refreshed `cinerific_PROJECT_SNAPSHOT.txt` during this artifact pass so the snapshot includes the new carousel helper, title-card drawables, generated mockup folders, ignored Alla Vostra PDF, and current worklog inventory.

Validation and Checks Performed

- Converted all pre-existing Cinerific worklog PDFs to text with `pdftotext` and inspected their section headings and recent July 28 wording before generating this artifact.
- Ran `pdftinfo` across prior worklogs to verify four-page count, letter-size geometry, metadata style, PDF version, and generator convention.
- Ran `git status --short --branch`, `git log --oneline --decorate`, `git show --stat --format=fuller HEAD`, `git show --name-status` for 47bcaf4 and 19054a3, and `git diff` for the refreshed snapshot.
- Ran `rg` across Home, Destination, Intro, and the new circular carousel helper to verify title-card routing, stroke helpers, snap behavior, cyclical row usage, and Martin avatar extraction flags.
- Ran file checks on the new title-card PNGs and confirmed each is a 700 by 526 card image.
- Ran `./read_project.sh` during this artifact pass; it refreshed `cinerific_PROJECT_SNAPSHOT.txt` at the repository root.

- Ran `./gradlew :app:compileDebugKotlin` during this artifact pass; the build completed successfully with BUILD SUCCESSFUL.
- Generated this PDF with a small standard-library PDF writer so the output remains text-extractable and consistent with prior Cinerific worklogs.

Files Touched During July 29

- `app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt`: Martin Create Account avatar character extraction now preserves dark saturated hair pixels.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificCircularCardCarousel.kt`: new circular card row, virtual modulo mapping, recentering, one-card horizontal snap fling behavior, and shared selected stroke pulse.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt`: selected center-card frames, vertical-center carousel selection, clickable full-row headers, cyclical carousel rows, title-card resources, and normal card-to-detail routing.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt`: list-card frames, vertical list snap behavior, detail library cyclical rows, detail selected-card frames, static title-card routing, and static title-card detail heroes.
- `app/src/main/res/drawable-nodpi/light_as_air_title_card.png`, `infatuation_title_card.png`, `into_the_wild_title_card.png`, and `morbid_temptations_title_card.png`: new static title-card artwork used anywhere those hero-reel titles appear as cards.
- `screenshots/generated/light_as_air_card_mockups` and `screenshots/generated/hero_reel_card_title_mockups`: ignored generated mockups used to preview the title-only card compositions.
- `.gitignore`: ignored the unrelated `.github/alla_vostra_worklog_july1.pdf` file.
- `cinerific_PROJECT_SNAPSHOT.txt` and `cinerific_worklog_july 29.pdf`: refreshed/generated project-management artifacts during this worklog pass.

Follow-Up Context

- Home and detail horizontal carousels now use a virtual `LazyRow` loop; future row edits should preserve stable title/card mappings for modulo selection.
- Movies/Shows list mode now has one-card vertical snap behavior, but the vertical catalog list remains finite rather than cyclical.
- The selected stroke animation is intentionally subtle: final visible stroke width is 3 px and the opacity pulse stays between 67 percent and 50 percent.
- The four title-card PNGs intentionally combine the original card stills with only the custom title art; descriptions, genres, and later reveal variants remain excluded from card assets.
- The Home hero reel remains available as the top video/presentation surface. Tapping carousel cards for those titles now opens the ordinary static detail screen.
- Generated PDFs and snapshots remain project-management artifacts unless explicitly committed after review.

Output Artifact

- Filename: `cinerific_worklog_july 29.pdf`
- Created at the repository root in `/Users/prahlin/gh/cinerific`.
- Covers Wednesday, July 29, 2026 (U.S. EST) Cinerific work, including source commits `47bc4f4` and `19054a3` plus this refreshed snapshot/worklog artifact pass.
- Follows the Cinerific filename convention established by `cinerific_worklog_july 12.pdf` and continued by the July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, and July 28 Part 2 artifacts.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: `cinerific_worklog_july 29.pdf`.
