

Cinerific Android App Work Log - July 28, 2026 Part 2 (U.S. EST)

Compiled summary for Tuesday, July 28, 2026 - Part 2 (U.S. EST) - focus: continuing the July 28 sign-in prototype into a fuller account-entry pass, tuning the Sign In floating labels down to the final 70 percent shrink, removing form-label punctuation, adding Remember me, adding animated chevron and drag-up return behavior, turning Create Account into its own three-column mock screen, replacing subscription and birth date text entry with dropdown controls, adding dimmed focus states, fixing landscape keyboard overlap by lifting form assets while moving the Cinerific logo offscreen, adding a Steve/Martin/Janny Create Account avatar carousel, separating moving avatar characters from a static bubble shell, removing reported bubble artifacts, refreshing the project snapshot, validating Kotlin compilation, committing the work as d2b16c1, and generating this latest Part 2 worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, and July 28 Part 1: compact opening summary, source-material review, baseline state, goal list, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the current source state on main through HEAD d2b16c1, plus the refreshed snapshot and generated worklog artifact from this July 28 Part 2 pass, and follows the prior root-level naming, letter layout, footer convention, metadata, and plain-text-readable PDF style.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, and July 28 Part 1.
- Used pdftotext output from all prior PDFs to preserve the established title pattern, source review style, baseline/goals sections, themed work-completed sections, validation language, files-touched list, follow-up close, output-artifact phrasing, footer convention, and daily-log length band.
- Used pdftinfo on the prior PDFs, especially July 28 Part 1, to confirm title metadata, author/creator/producer fields, letter page geometry, PDF generator naming, and the Part 1 U.S. EST title precedent.
- Ran ./read_project.sh and reviewed the refreshed cinerific_PROJECT_SNAPSHOT.txt for the current Android source layout, drawable inventory, root-level worklog inventory, generated-file policy, and snapshot convention.
- Reviewed git status, git log, and git show --stat around HEAD d2b16c1, the July 28 Part 2 commit titled Updated sign-in and create account interaction flows.
- Reviewed CinerificIntroView.kt around native intro drawing, custom View input handling, form state, dropdown state, dimming, IME/landscape lift handling, drag gestures, avatar carousel state, character extraction, and final bubble-shell rendering.
- Reviewed user-provided emulator screenshots from the avatar-carousel polish loop to track the center icon artifact, residual silhouette, dark rectangle, and heavy gray interior fill that were removed during the final shell pass.

Baseline Status Before July 28 Part 2

- Cinerific entered Part 2 with the July 28 Part 1 sign-in form prototype already logged and committed, including the centered username/password fields, live canvas text input, password masking, caret drawing, IME bridge, and focus motion against the Cinerific logo centerline.
- The floating labels still reflected the earlier 85 percent shrink request, and the user wanted them iterated through 80 percent and 75 percent before settling at 70 percent shrink.
- The Sign In labels still needed punctuation cleanup, the Sign In action text still needed to become an animated form title, and the form screen did not yet include Remember me or a return chevron.
- Create Account was still only an action-row prompt, without its own form screen, account creation field stack, subscription/date controls, or avatar-selection surface.
- Landscape mode still allowed the software keyboard to obscure Sign In and Create Account fields until a different keyboard-aware lift method moved form assets into the top band.
- The Create Account avatar area had not yet grown into a three-avatar carousel, and the later static-bubble treatment still needed to match the login avatar appearance without introducing visual artifacts.

Main Goals for July 28 Part 2

- Tune Sign In floating labels to a final 70 percent shrink and remove punctuation from form field labels.
- Add Remember me, an animated return chevron, and whole-screen drag-up-to-return behavior from form screens.

- Make Sign In animate with the form fields, become the form title, reduce its size, remove bold styling, and center it horizontally across the form field width.
- Build a Create Account form with stable top anchors, three columns, third-row fields, and controls for username, password, confirm password, email, subscription tier, birth date, and avatar choice.
- Replace subscription and birth date text entry with dropdown controls, opaque popups, date scrollbars, five visible date values, Day 1-31, and Year 1900-2026.
- Dim non-active screen content while any field or dropdown listens for input, then undim smoothly after text entry or selection.
- Fix landscape keyboard obstruction for both Sign In and Create Account without changing portrait behavior.
- Add a Steve/Martin/Janny avatar carousel whose character art moves through a static circular bubble shell on chevron taps and drag gestures.

Work Completed - Sign-In Labels, Header, Remember Me, and Return

- Changed the floating-label scale from the prior 85 percent shrink through the requested follow-up sizes and settled at a 70 percent shrink, leaving labels at 30 percent of their original size when focused or populated.
- Removed punctuation from Username and Password labels while preserving the custom canvas text input, caret rendering, password masking, and focus-hit math from the Part 1 form.
- Added Remember me below the password field with custom checkbox drawing, local checked state, hit testing, and draw coordinates tied to the moving form stack.
- Made Sign In slide in with the form screen, moved it from left alignment to centered alignment across the fields, reduced it by one point, removed bold styling, and kept it visually continuous with the original Sign In prompt.
- Added a large short downward-facing chevron below Remember me, reduced its stroke thickness through follow-up tuning, and connected it to the form close animation.
- Implemented full-screen drag-up-to-return so the user can leave Sign In or Create Account by dragging upward anywhere on the form surface, not only by tapping the chevron.

Work Completed - Create Account Form and Dropdown System

- Added a Create Account mock flow using the same native intro transition system as Sign In, with the title and form top anchors preserved after the user requested no vertical anchor drift.
- Built the three-column account creation layout: Username, Password, and Confirm Password in the left column; Email Address, Subscription Tier, and Month/Day/Year birth date controls in the middle column; Avatar controls in the right column.
- Placed third-row fields below the existing two-row layout rather than moving the accepted first-row and second-row anchors.
- Replaced Membership Tier with a Subscription Tier dropdown offering Option 1, Option 2, and Option 3, with chevron affordance, selected-value display, and opaque open-state rendering.
- Replaced Birth Date with separate Month, Day, and Year dropdown controls, equalized Month/Day widths, and increased date control fonts as much as possible without clipping.
- Made date dropdowns open upward, set their top edge to the Email Address field top anchor, set their bottom edge to the top of each date box, showed five values initially, added nested scrollbars, supplied Day 1-31, and supplied every Year from 1900 through 2026.
- Added dropdown hit testing, option selection, scroll offset state, drag scrolling, selected-value updates, and focus/dim cleanup after a selection is made.

Work Completed - Focus Dimming and Landscape Keyboard Lift

- Added a quick smooth dim layer when any text field or dropdown begins listening for input, while keeping the active field or popup readable above the dimmed rest of the screen.
- Cleared the dim state after typed input or dropdown selection so the screen returns to normal brightness without an extra tap.
- Added landscape-only keyboard lift progress so Sign In and Create Account assets move to the top of the screen when keyboard or dropdown focus would otherwise obscure the form.
- Moved the Cinerific logo fully upward and offscreen in landscape during input focus, solving the earlier unchanged attempts where the logo and form assets did not visibly move.
- Preserved portrait behavior by making the landscape lift target zero in portrait and by keeping the

existing portrait form-focus motion path intact.

- Used window-inset and visible-display-frame checks to detect IME visibility, then threaded the lift through stage metrics so drawing and hit testing stayed aligned.

Work Completed - Create Account Avatar Carousel

- Increased the Create Account avatar header/image stack by 25 percent and added left and right chevrons beside the avatar bubble.
- Added a two-way carousel ordered Steve, Martin, and Janny, with wrapping previous/next navigation from chevron taps.
- Expanded the avatar area into a square drag zone that includes the header, bubble image, and chevrons, allowing left drag for the next avatar and right drag for the previous avatar.
- Tracked drag direction, drag progress, commit threshold, carousel start progress, and transition timing so taps and partial drags animate into the same sliding carousel behavior.
- Separated each avatar into a moving character bitmap and a static bubble shell so tap and drag transitions move only the avatar character inside the circular frame.
- Generated character-only bitmaps at runtime from the accepted avatar bubble PNGs by keeping colorful body pixels and nearby dark outline pixels while making unrelated pixels transparent.

Work Completed - Static Bubble Shell and Artifact Cleanup

- Studied the login avatar bubble assets and confirmed their original edge/shadow appearance comes from per-pixel alpha variation, not just a flat-opacity radial color gradient.
- Removed the fake Canvas radial-gradient bubble approximation and began drawing the Create Account carousel against a bitmap-derived static shell.
- Removed the generated center icon artifact that appeared when the first shell-fill approach synthesized pixels at the bubble center.
- Removed the residual Steve-shaped silhouette/contour left behind by the first transparent character-mask approach.
- Removed the later dark landscape-oriented rectangle and thick gray interior mass caused by an overfilled inpaint/smoothing reconstruction pass.
- Settled the final shell strategy as outer-ring-only: original pixels outside the inner circular avatar window are preserved, the entire inner window is transparent, and the moving avatar character remains clipped inside that circular interior.

Work Completed - Validation, Snapshot, and Commit State

- Compiled the app repeatedly during the Part 2 interaction pass with `./gradlew :app:compileDebugKotlin`, including validation after the avatar-shell rendering changes.
- Used the user-provided Android Studio/emulator screenshots as visual evidence for each avatar artifact correction rather than relying only on code inspection.
- Committed the July 28 Part 2 source and refreshed snapshot work on main as HEAD d2b16c1 with the message Updated sign-in and create account interaction flows.
- Ran `./read_project.sh` during this artifact pass so `cinerific_PROJECT_SNAPSHOT.txt` reflected the latest source tree, drawable inventory, generated-file policy, and worklog inventory.
- Ran `./gradlew :app:compileDebugKotlin` during this worklog artifact pass; the build completed successfully with BUILD SUCCESSFUL.

Validation and Checks Performed

- Converted all pre-existing Cinerific worklog PDFs to text with `pdftotext` and inspected line/word counts to preserve the established length band and section cadence.
- Inspected section headings across July 12 through July 28 Part 1 to preserve the Source Materials Reviewed, Baseline Status, Main Goals, Work Completed, Validation, Files Touched, Follow-Up Context, and Output Artifact structure.
- Inspected July 28 Part 1 as the nearest template for Part 2 naming, U.S. EST title wording, root-level lowercase filename convention, footer wording, and output-artifact phrasing.
- Ran `pdftinfo` across prior PDFs to confirm metadata conventions, letter-size geometry, and Codex standard-library PDF generator naming.
- Ran `git log --oneline --decorate -12`, `git show --stat --format=fuller HEAD`, `git status --short --branch`, and `git diff --stat` to confirm the Part 2 source scope and current working-tree state.

- Ran rg and source reads against CinerificIntroView.kt to verify current Sign In, Create Account, dropdown, dimming, landscape lift, carousel, character extraction, and shell implementations before writing this artifact.
- Generated this PDF with a small standard-library PDF writer so the output remains text-extractable and consistent with prior Cinerific worklogs.

Files Touched During July 28 Part 2

- app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt: Sign In label sizing and punctuation cleanup, Remember me row, animated Sign In title, chevron/drag return, Create Account flow, three-column layout, dropdown controls, date scrolling, dimming, landscape keyboard lift, avatar carousel, drag navigation, character-only avatar extraction, and outer-ring-only bubble shell rendering.
- cinerific_PROJECT_SNAPSHOT.txt: refreshed generated project snapshot reflecting the current July 28 Part 2 source state, root file tree, drawable inventory, and worklog inventory.
- cinerific_worklog_july 28 part 2.pdf: this Part 2 (U.S. EST) worklog artifact generated at the repository root.

Follow-Up Context

- The Sign In and Create Account screens remain mock account-entry surfaces; they do not yet authenticate, validate, persist credentials, create accounts, recover passwords, or route into a real account backend.
- Subscription Tier options are placeholder labels, date dropdowns provide local mock selection only, and Remember me stores only local mock checked state inside the intro view.
- The Create Account avatar carousel currently exposes Steve, Martin, and Janny as requested; Guest remains part of the settled sign-in avatar row but is not part of this carousel order.
- The avatar rendering still depends on accepted _bubble_edge50_body0_test resources. Future asset cleanup can promote those accepted test-named files to final names after the sign-in/create-account visual system fully settles.
- The final avatar bubble shell intentionally keeps the interior transparent to avoid body-shaped artifacts. Any future filled-glass interior should come from a clean designer asset rather than reconstruction from an avatar-bearing PNG.
- Generated PDFs and snapshots remain project-management artifacts unless explicitly committed after review.

Output Artifact

- Filename: cinerific_worklog_july 28 part 2.pdf
- Created at the repository root in /Users/prahlin/gh/cinerific.
- Covers Tuesday, July 28, 2026 Part 2 (U.S. EST) Cinerific work and uses the lowercase part naming precedent established by cinerific_worklog_july 15 part 1.pdf and continued by cinerific_worklog_july 28 part 1.pdf.
- Follows the Cinerific filename convention established by cinerific_worklog_july 12.pdf and continued by the July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, and July 28 Part 1 artifacts.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: cinerific_worklog_july 28 part 2.pdf.
