

Cinerific Android App Work Log - September 21, 2026 Part 2 (U.S. EST)

Compiled continuation for Monday, September 21, 2026 (U.S. Eastern Time) - focus: refining the portrait-only Cinerific intro after the first September 21 worklog, using the connected Samsung Galaxy S21 FE as the reference for stack-to-screen-height proportions, preventing short and wide portrait displays from cramming or clipping the logo, profile, name, and account routes, shortening the recovery label, adding continuous bidirectional profile slide-and-fade motion, strengthening Create My Account avatar navigation, validating the same APK on the phone and Standard tablet emulator, correcting cold-launch intro timing, and matching the accepted landscape logo animation with a larger center-stage portrait assembly that shrinks while settling to the top. Generated in continuity with the established Cinerific worklog cadence and the earlier September 21 worklog: compact opening summary, source material review, baseline state, goals, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. Because cinerific_worklog_september 21.pdf already existed, this continuation follows the repository's same-day naming convention as cinerific_worklog_september 21 part 2.pdf. Eastern Time was verified from the host as Monday, September 21, 2026 at 10:38 PM EDT, UTC-04:00. The title retains the established U.S. EST label while the body records the seasonally accurate EDT verification. This artifact covers commits 4e71699 and 0b5b23c after the first September 21 worklog commit 7f2ec94.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, July 29, August 1, August 3, August 4, August 5, September 19, and September 21.
- Compared title cadence, opening-summary density, baseline and goals sections, themed completion sections, validation language, files-touched inventories, follow-up closes, filename casing, PDF metadata, and right-aligned footer treatment.
- Re-read the generated project snapshot and current Kotlin source paths for MainActivity, CinerificApp, and CinerificIntroView, then inspected repository history and full diffs for commits 4e71699 and 0b5b23c.
- Reviewed live ADB state, display sizes, densities, rotations, window bounds, app focus, screenshots, touch behavior, and repeated APK installs on Samsung SM-G990U R5CRC33MGNZ and emulator-5554.
- Compared the portrait logo, avatar, nameplate, and account-link stack against the S21 FE reference viewport of 360 by 780 dp and the Standard tablet portrait app viewport of 800 by 1220 pixels at 160 dpi.
- Inspected the existing Create My Account avatar carousel drag, clipping, direction, progress, and 280 millisecond completion logic before sharing its motion model with the portrait profile selector.
- Used pdffinfo, pdffonts, and pdftotext against the prior worklogs to preserve U.S. Letter pages, Helvetica, PDF 1.4 output, text extraction, Codex metadata, and footer conventions.

Baseline Status Before Part 2 Work

- The first September 21 pass had introduced a dedicated portrait composition with one swipeable profile, safe-area spacing, high-resolution avatar artwork, and an optimized standalone tablet QA environment.
- Portrait rendering still scaled its design stage entirely from screen width, which made the short, wide tablet portrait viewport enlarge the complete stack more aggressively than the taller S21 FE.
- The tablet therefore showed reduced vertical breathing room and risked crowding the final recovery route against the bottom system area.
- The settled portrait profile changed only after swipe release; it did not visibly track the finger or animate the outgoing and incoming profiles like the Create My Account carousel.
- The Create My Account carousel recalculated direction from the latest pointer delta and used a larger commit fraction, making one direction vulnerable to rotated-emulator release jitter.
- The account route still read Forgot User/Password instead of the shorter requested Forgot Password label.

- The intro timestamp passed through MainActivity and rememberSaveable, so restored state could point to an old uptime value and skip directly to the final frame after a cold relaunch.
- Portrait logo bounds used the final top position as both the assembled and settled target, so the visible center-stage logo movement from landscape was absent.

Main Goals for September 21 Part 2

- Treat the S21 FE's current portrait stack-to-height proportions as the reference across portrait aspect ratios.
- Prevent short or wide portrait viewports from introducing overlap, clipping, bleed-in, or compressed vertical rhythm.
- Make profile swiping visibly continuous, bidirectional, and actionable across the full avatar/name region.
- Match the portrait profile transition to the Create My Account carousel's slide timing while adding requested cross-fades.
- Stabilize both directional paths in the Create My Account avatar carousel on the rotated tablet emulator.
- Ensure every true cold app process visibly begins the intro timeline after the custom view is ready to draw.
- Restore the landscape-style logo story in portrait: assemble larger at vertical center, then shrink and move to the existing top position.
- Preserve accepted landscape behavior unless an explicitly shared interaction required common handling.

Work Completed - Portrait Scale and Copy

- Added a portrait reference height-to-width ratio from the S21 FE's 360 by 780 dp viewport.
- Capped portrait design scale by both available width and the S21-derived height proportion, allowing tall phones to retain their approved size while reducing the full stack on shorter, wider portrait screens.
- Kept logo, avatar, profile name, and account routes inside one proportional system instead of shrinking isolated elements independently.
- Confirmed the S21 FE retained its accepted composition while the tablet gained clear top, inter-stack, and bottom breathing room.
- Preserved portrait safe-top and safe-bottom calculations after the scale change so system bars remained part of the layout constraints.
- Changed the shared recovery route from Forgot User/Password to Forgot Password, producing the requested copy across portrait aspect ratios and the common source path.

Work Completed - Portrait Profile Motion

- Added dedicated portrait drag delta, from-index, to-index, direction, start-progress, and animation-clock state.
- Rendered outgoing and incoming avatar/name pairs together while the finger moved instead of swapping the selected index after release.
- Used the Create My Account carousel's 280 millisecond completion timing for a consistent interaction language.
- Moved each profile name with its avatar so the selected identity remained one coherent animated unit.
- Added progress-based cross-fading: the outgoing avatar/name fades toward zero while the incoming avatar/name fades toward full opacity.
- Applied the same fade progression during direct drag and release completion, removing endpoint snaps.
- Expanded the portrait gesture surface beyond the circular avatar to include the complete avatar/name region and surrounding horizontal padding.
- Replaced a density-based fixed commit distance with a responsive fraction of rendered avatar width, improving mouse and touch usability across tablet and phone densities.
- Kept cyclic previous/next profile selection, persisted selected profile state, and blocked new

profile touches while completion animation was active.

Work Completed - Create Account Carousel Reliability

- Reproduced and separated rotated-emulator coordinate behavior from the Create My Account carousel's actual gesture path.
- Locked the carousel direction as soon as horizontal intent crossed touch slop, preventing release jitter from reversing or clearing the chosen direction.
- Reset the locked direction on new touches, cancellation, flow closure, snapshot restoration, and carousel reset paths.
- Reduced the Create My Account avatar drag commit fraction from 24 percent to 12 percent for reliable use near the right side of compact portrait screens.
- Preserved chevron navigation, circular clipping, wraparound index behavior, artwork, and the established completion duration.
- Kept the carousel implementation shared across device classes and orientations while limiting the main welcome-profile carousel to its portrait-only presentation.

Work Completed - Intro Launch Timing and Logo Motion

- Removed the boot timestamp parameter from MainActivity and CinerificApp and stopped persisting it through rememberSaveable.
- Added a process-scoped intro animation clock owned by CinerificIntroView and initialized it from the first actual draw.
- Prevented stale restored uptime values from reporting a fully completed animation immediately after force-stop and cold launch.
- Preserved one process timeline through orientation-driven view recreation so rotation does not restart the intro unexpectedly.
- Temporarily looped the intro at 4.812 seconds with a 1.2 second settled hold while both portrait devices were used to inspect execution, then removed the diagnostic loop from the accepted build.
- Added a portrait-specific assembled logo target at the usable screen's vertical center before the existing top settle position.
- Matched landscape's pre-settle ratio by rendering the centered portrait logo at 1.25 times its settled width and height.
- Interpolated size and position together so the assembled logo continuously shrinks while traveling upward.
- Preserved the approved settled portrait size, optical horizontal correction, top position, and all established landscape logo bounds.

Work Completed - Device and Runtime QA

- Confirmed ADB visibility for the Samsung Galaxy S21 FE and Standard tablet emulator before each runtime pass.
- Measured the S21 FE at 1080 by 2340 physical pixels, 480 dpi, and 360 by 780 dp in portrait.
- Measured the Standard tablet emulator at 1280 by 800 physical pixels and 160 dpi, with portrait app bounds of 800 by 1220 pixels after rotation.
- Built and installed the same debug APK repeatedly on both targets after scaling, copy, swipe, fade, direction, timing, and logo-motion changes.
- Captured live mid-drag frames showing outgoing and incoming profiles simultaneously on the tablet and S21 FE.
- Verified short drags beginning on the tablet profile name advanced profiles after the touch-region and commit-progress changes.
- Cleared Cinerific cache and Compose inspection cache on the tablet, then performed a full app-data reset and clean reinstall when cache clearing alone did not alter preserved state.
- Rebooted both Android targets, waited for sys.boot_completed=1, relaunched Cinerific, and corrected each device's distinct natural-orientation rotation value.
- Locked the S21 FE to rotation 0 and the landscape-native tablet emulator to rotation 1 for portrait comparison.

Validation and Checks Performed

- Ran `./gradlew :app:assembleDebug` after each completed source pass; all final builds reported BUILD SUCCESSFUL.
- Ran `git diff --check` without whitespace errors before the commits and documentation pass.
- Verified commit 4e71699, Improved portrait scaling and avatar navigation, contained the responsive scale, copy, swipe, fade, and direction work plus a refreshed snapshot.
- Verified commit 0b5b23c, Improved portrait intro launch timing and logo motion, contained the first-draw timing correction and accepted portrait logo movement.
- Installed the committed APK on both connected devices and confirmed Cinerific MainActivity held current focus.
- Inspected settled phone and tablet screenshots for safe-area clearance, stack spacing, readable recovery copy, and unchanged final logo placement.
- Inspected mid-swipe screenshots to confirm synchronized translation and opacity changes for both outgoing and incoming profile pairs.
- Verified the diagnostic loop was removed after motion approval and the production intro returned to a one-shot timeline.
- Verified host Eastern Time directly with `TZ=America/New_York` before generating this Part 2 artifact.
- Rendered and inspected the generated PDF pages for four-page count, clipping, wrapping, footer placement, metadata, and text extraction.

Files Touched During September 21 Part 2

- `app/src/main/java/com/prahlin/cinerific/MainActivity.kt`: removed activity-owned intro timing plumbing and returned the root composable call to `CinerificApp()`.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt`: removed saveable boot-start state and timestamp forwarding while preserving intro snapshots and authenticated navigation state.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt`: added S21-derived portrait scaling, shorter recovery copy, profile slide/fade state, expanded swipe targeting, responsive commit progress, Create Account direction locking, first-draw process timing, and larger center-stage portrait logo settling.
- `cinerific_PROJECT_SNAPSHOT.txt`: refreshed during commit 4e71699 to include the newest worklog inventory and project timestamp.
- `cinerific_worklog_september 21 part 2.pdf`: added this convention-matched same-day continuation artifact.

Follow-Up Context

- Portrait layout remains intentionally governed by the S21 FE stack-to-height reference; future portrait tuning should preserve the proportional system rather than add device-name branches.
- The welcome profile carousel is portrait-only because landscape presents all four profiles simultaneously; the Create My Account carousel remains available across orientations.
- The approved portrait logo now assembles larger at vertical center and shrinks while moving upward. Its final size and top location should remain stable unless explicitly revisited.
- The intro clock now begins on first draw and persists for the process lifetime. A true force-stop or process restart creates a new timeline, while a rotation within the process retains progress.
- The temporary loop used for motion review is not present in the accepted source.
- The tablet emulator is landscape-native and requires rotation 1 for portrait, while the S21 FE requires rotation 0; ADB input coordinates can be transformed when testing the rotated emulator.
- Both commits are on main and origin/main. This PDF is the only new uncommitted artifact created by the Part 2 documentation pass.

Output Artifact

- Created `cinerific_worklog_september 21 part 2.pdf` at the repository root as the latest Cinerific worklog for Monday, September 21, 2026 Eastern Time.
- The artifact follows the established four-page U.S. Letter, Helvetica, text-extractable PDF 1.4 format with Codex metadata and right-aligned page footers.
