

Cinerific Android App Work Log - July 16, 2026

Compiled summary for Thursday, July 16, 2026 - focus: completing the post-Home & Default navigation pass, importing and optimizing the remaining Home hero-reel clips, ensuring clip 4 loops back to clip 1, making the right-side burger rail actionable across Home, Movies, Shows, Favorites, and Settings, refining the rail reveal/spacing/top-toolbar behavior, adding matching destination top bars, replacing placeholder nav icons with Figma-derived assets, validating the result on the Cinerific tablet AVD, and committing/pushing the completed source state.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, and July 15: compact opening summary, source-material review, baseline state, goal list, work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the Cinerific work completed after the July 15 navigation/video baseline and follows the prior root-level PDF naming, four-page letter layout, footer, and plain-text-readable style.

Source Materials Reviewed

- Reviewed every existing Cinerific worklog PDF at the repository root: cinerific_worklog_july 12.pdf, cinerific_worklog_july 14.pdf, cinerific_worklog_july 15 part 1.pdf, and cinerific_worklog_july 15.pdf.
- Used pdftotext and pdfinfo to study prior naming, metadata, page count, page size, title pattern, footer convention, section order, bullet density, and the plain standard-library PDF generator style.
- Re-read the July 15 worklog baseline, which documented the first right-side rail, Movies/Shows/Favorites/Settings scaffolds, the single raw Home hero reel, and the remaining need for AVD/logcat verification and Figma-derived destination detail.
- Reviewed the current Cinerific Git state on main tracking origin/main, including the latest pushed commit 0765364, local clean status after push, and the exact file additions, deletions, and modifications in the committed diff.
- Reviewed app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt for the TextureView/MediaPlayer hero-reel lifecycle, sequential clip index, completion handling, and raw resource list.
- Reviewed app/src/main/java/com/prahlin/cinerific/ui/CinerificRightSideNavBar.kt for right-rail layout, inset protection, open progress, burger rotation timing, destination callbacks, Figma icon resource rendering, and bottom settings spacing.
- Reviewed app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt for the destination top-bar treatment, status-bar-aware padding, and Movies/Shows/Favorites/Settings catalog/settings surfaces.
- Used the local Figma Desktop MCP endpoint to inspect the Right Nav Bar - Home frame and icon node IDs, then decoded screenshots for Home, Movies, Shows, Favorites, and Settings to identify the original Figma silhouettes.
- Used adb device checks, emulator screenshots, Gradle assembleDebug output, APK install output, Git commit/push output, file/resource inspection, and current repo status as validation material for this worklog.

Baseline Status Before July 16 Work

- Cinerific already had the July 14 intro renderer, imported intro/profile artwork, and the July 15 Home & Default screen scaffold with Figma-cropped program rows.
- The July 15 pass had introduced avatar-driven entry into the main experience and a first right-side rail, but the rail still needed Figma-accurate interaction, spacing, reveal behavior, and screen-icon fidelity.
- Home video playback had moved from a static hero crop to a raw MP4 reel, but the newer desired behavior was a four-clip sequence that plays clips 1 through 4 and then restarts at clip 1 after clip 4 completes.
- Destination screens existed as usable scaffolds, but Movies, Shows, Favorites, and Settings still needed the top horizontal bar treatment that matched the right nav rail color and respected native tablet toolbar space.
- The nav rail had to protect only the vertical space occupied by the native top tablet toolbar, not force a mismatched toolbar color or leave the rail background visible before the burger menu opened.
- The screen icons in the rail were still placeholder Material icons in code, which meant Movies, Shows, Settings, and other destinations did not correspond to the original Figma artwork.
- The project had no exported right-rail destination icon assets under res/drawable-nodpi before the Figma screenshot extraction pass, so the fix required adding resources as well as code wiring.

Main Goals for July 16

- Import and optimize the remaining video clips that belong to the Home/default hero reel.
- Make the Home hero reel advance through four raw MP4 clips and loop from clip 4 back to clip 1.
- Connect the right-side burger navigation so Home, Movies, Shows, Favorites, and Settings are reachable

from the rail.

- Keep the rail background fill hidden until the burger is clicked, then reveal it with the burger rotated 90 degrees.
- Tune the burger rotation so it is fast but visually smooth instead of snapping instantly.
- Match vertical spacing between the burger, nearby destination icons, top toolbar protection area, and bottom Settings breathing room.
- Add the top horizontal bar treatment to the relevant destination screens without changing native system toolbar coloring incorrectly.
- Replace the placeholder right-rail icons with the original Figma-derived Home, Movies, Shows, Favorites, and Settings imagery.
- Build, install, launch, screenshot-check, commit, and push the accepted Cinerific state.

Work Completed - Home Hero Reel

- Replaced the single tracked home_hero_reel.mp4 raw resource with four raw clip resources: home_hero_reel_01.mp4, home_hero_reel_02.mp4, home_hero_reel_03.mp4, and home_hero_reel_04.mp4.
- Updated LoopingHeroVideoView so it maintains a currentVideoIndex instead of depending on a single looping MediaPlayer source.
- Changed MediaPlayer looping from isLooping=true to explicit completion handling so each clip can finish naturally and hand off to the next indexed clip.
- Added a HeroReelVideos raw-resource array and advanced currentVideoIndex with modulo arithmetic so the sequence restarts at clip 1 immediately after clip 4 completes.
- Preserved muted playback, TextureView surface handling, center-crop transform logic, asynchronous preparation, and lifecycle cleanup from the earlier video implementation.
- Added error handling that advances to the next clip when the active player fails, avoiding a stuck hero surface when a single media item fails to prepare or play.

Work Completed - Right-Side Navigation Behavior

- Kept the right-side burger visible as the collapsed entry point and made the rail destinations actionable after expansion.
- Added destination callbacks so tapping Home, Movies, Shows, Favorites, or Settings updates visual selection and routes the Compose app to the matching screen.
- Changed the rail background fill to animate with openProgress, so the dark bgfill is not visible before the burger is clicked and becomes visible only while expanded.
- Preserved the burger as the persistent collapse/open control, with a 90-degree rotation while expanded.
- Tuned the rotation animation to a 200 ms tween with a smooth cubic easing curve, giving the user the requested fast-but-smooth motion instead of an instant snap.
- Used status-bar and navigation-bar insets to place the burger and Settings item relative to actual tablet system UI rather than hard-coded screen-only coordinates.
- Matched the vertical center gap between the burger and nearest icon to the inter-icon spacing below it, then matched Settings bottom breathing room to the burger-side breathing room.

Work Completed - Destination Chrome and Top Bars

- Added statusBar-aware top padding to Movies, Shows, Favorites, and Settings content so native top toolbar space remains protected without forcing an unrelated system color.
- Added DestinationTopBar with the same dark chrome color used by the right rail, allowing each relevant destination screen to visually line up with the rail zone.
- Kept the destination background gradient and card row scaffolds intact while placing the new horizontal bar above them.
- Adjusted right-side padding and top offsets so the catalog/settings content does not collide with the rail, the toolbar area, or the nav icons.
- Verified the destination surfaces still render as usable Movies, Shows, Favorites, and Settings screens after the chrome change.

Work Completed - Figma Nav Icon Assets

- Queried the open Figma file through the local Desktop MCP server and identified the Right Nav Bar - Home frame and icon node IDs for Home, Movies, Shows, Favorites, and Settings.
- Confirmed from the Figma screenshot that the original rail icons are a filled house for Home, a ticket for Movies, a projector/reel for Shows, an outlined star for Favorites, and a filled gear for Settings.
- Added nav_icon_home.png, nav_icon_movies.png, nav_icon_shows.png, nav_icon_favorites.png, and nav_icon_settings.png under app/src/main/res/drawable-nodpi.

- Converted the isolated Figma screenshots from opaque rail-colored captures into transparent alpha-mask PNG resources so Compose tinting affects only the icon silhouette, not a rectangular background.
- Replaced Material destination icons in `CinerificRightSideNavBar.kt` with a `NavIconAsset` resource model and `PainterResource`-based Image rendering.
- Preserved selected/inactive tint behavior while giving each icon its original Figma aspect ratio and visual footprint.
- Rebuilt, reinstalled, and screenshot-checked the opened rail after the alpha-mask repair to confirm the rectangles were gone and the Figma silhouettes were visible in the running app.

Work Completed - Commit and Push

- Built the debug APK after the icon and nav-resource changes, then installed it onto emulator-5554.
- Relunched `com.prahlincinerific.MainActivity`, selected the Guest profile, opened the burger rail, and verified the rail displayed the Figma-derived icon silhouettes against the expanded bgfill.
- Tapped a destination from the opened rail to confirm the click target still navigated after the resource-backed icon swap.
- Staged the intended source/resource set: destination screen chrome, home hero reel playback, right-side nav behavior/icons, five nav icon PNGs, removal of the old combined reel, and four raw hero-reel clips.
- Created commit 0765364 on main with the title Implement Cinerific home reel and Figma-matched navigation polish.
- Pushed main to origin at <https://github.com/Prahlincinerific.git> and confirmed the local branch is aligned with origin/main afterward.

Validation and Checks Performed

- Ran `./gradlew assembleDebug` after the resource-backed nav icon change; the debug build completed successfully.
- Installed the resulting debug APK with `adb -s emulator-5554 install -r app/build/outputs/apk/debug/app-debug.apk`; the install completed successfully.
- Launched the app through adb shell `am start -n com.prahlincinerific.MainActivity` and verified the profile picker, Home screen, and opened right rail through emulator screenshots.
- Captured screenshots before and after opening the nav rail, then captured a corrected opened-rail screenshot after converting the Figma icon PNGs to transparent alpha masks.
- Verified the opened rail visually showed the house, ticket, projector/reel, star, and gear icons rather than solid tinted rectangles or placeholder Material icons.
- Tapped a destination from the rail and confirmed the app navigated into a destination screen with the right rail still active and the selected icon state visible.
- Ran `git status --short --branch` after the push and confirmed main is clean and aligned with origin/main.
- Reviewed `git show --stat` and `git log` for commit 0765364 to confirm the committed scope matches the source and asset changes described in this worklog.

Files Touched During July 16

- `app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt`: advances the Home hero through four raw video clips, loops clip 4 back to clip 1, and hardens MediaPlayer completion/error cleanup.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificRightSideNavBar.kt`: implements the actionable expanded rail, smooth burger rotation, inset-aware spacing, rail bgfill reveal behavior, and Figma-derived destination icon rendering.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt`: adds status-bar-aware top chrome and content padding for Movies, Shows, Favorites, and Settings.
- `app/src/main/res/drawable-nodpi/nav_icon_home.png`, `nav_icon_movies.png`, `nav_icon_shows.png`, `nav_icon_favorites.png`, and `nav_icon_settings.png`: new transparent alpha-mask assets derived from the Figma right-nav icon nodes.
- `app/src/main/res/raw/home_hero_reel.mp4`: removed the earlier combined/single hero-reel resource.
- `app/src/main/res/raw/home_hero_reel_01.mp4` through `home_hero_reel_04.mp4`: new optimized raw clip sequence for the Home/default hero reel.
- `cinerific_worklog_july 16.pdf`: this generated daily worklog artifact at the repository root.

Follow-Up Context

- The right rail now navigates and visually matches the original Figma icon set, but Movies, Shows, Favorites, and Settings still remain scaffold/content screens rather than fully imported final Figma screens.
- The Home hero reel is sequenced and loops correctly by index, but broader media diagnostics may still

benefit from Media3/ExoPlayer if playback control, buffering state, or lifecycle ownership becomes more complex.

- The Figma-derived icons are small alpha-mask PNGs made from the live Figma node captures. If larger vector exports become available later, those could replace the masks for sharper scaling on very high-density displays.
- Additional accessibility labels, focus states, card click behavior, row chevrons, and settings actions can be layered in once the visual/navigation rail is accepted as the baseline.
- Generated worklog PDFs are currently ignored by .gitignore unless explicitly force-added, while older July 12 and July 14 PDFs remain tracked historical artifacts.
- A future project snapshot refresh can record the final pushed July 16 source state if the team wants read_project.sh output to include the new nav icon and hero-reel asset inventory.

Output Artifact

- Filename: cinerific_worklog_july 16.pdf
- Created at the repository root in /Users/prahlin/gh/cinerific.
- Follows the Cinerific filename convention established by cinerific_worklog_july 12.pdf and continued by the July 14 and July 15 artifacts, including the space before the day number.
- Follows the established Alla Vostra/Prahlín/Cinerific daily worklog structure while keeping the body content specific to Cinerific work.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: cinerific_worklog_july 16.pdf.
