

Cinerific Android App Work Log - August 5, 2026 (U.S. EST)

Compiled summary for Wednesday, August 5, 2026 (U.S. EST) - focus: continuing the post August 4 auth preview and Create My Account pass by reviewing the current project snapshot and all prior Cinerific worklogs, fixing the Android Studio AVD rotation path so the app layout responds to device rotation again, importing the Basic, Pro, and Rock Star Membership Tier artwork from the Figma Settings section, cleaning and cropping those PNG assets, wiring the Create My Account Subscription Tier dropdown to real tier names, preserving Subscription Tier as the pre-selection placeholder, replacing Option 1 through Option 3 with Basic, Pro, and Rock Star, scaling and validating the new tier imagery in the open and selected dropdown states, preserving framed tier assets for future Settings screens, refreshing the project snapshot, compiling the app, committing the source work as b21da95, and generating this latest Cinerific PDF worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, July 29, August 1, August 3, and August 4: compact opening summary, source material review, baseline state, goals, themed work completed sections, validation, files touched, follow up context, and output artifact close.

No August 5 Part 1 PDF existed in the repository, so this artifact follows the no part filename convention for the first August 5 worklog. It records the current source state on main through HEAD b21da95, Updated Create Account tiers and rotation behavior, plus the refreshed snapshot and generated worklog artifact from this August 5 documentation pass.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, July 29, August 1, August 3, and August 4.
- Converted the prior worklogs with pdftotext and inspected heading cadence, opening summary rhythm, source review style, baseline/goals sections, themed work completed sections, validation language, files touched lists, follow up close, output artifact phrasing, footer convention, and U.S. EST title convention.
- Ran pdftinfo against the latest August 4 worklog to preserve the four page letter layout, title metadata, subject, author, creator, producer fields, PDF 1.4 output, and Codex standard-library PDF generator pattern.
- Reviewed cinerific_PROJECT_SNAPSHOT.txt for the August 5 generated timestamp, project tree, drawable inventory, root worklog inventory, binary asset inventory, Android source dump, and read_project.sh snapshot convention.
- Reviewed git log, git status, git show --stat, git show --name-status, and git show c1d1aa8..HEAD to identify the source changes committed after the August 4 worklog artifact.
- Reviewed app/src/main/AndroidManifest.xml, CinerificApp.kt, and CinerificIntroView.kt around orientation behavior, saved dropdown fallback text, native intro dropdown drawing, membership tier image decoding, selected tier state, and dropdown hit/render behavior.
- Reviewed the committed drawable-nodpi tier assets: membership_tier_basic.png, membership_tier_pro.png, membership_tier_rock_star.png, and the separate art-only variants used by Create My Account.
- Reviewed runtime context from the August 5 pass, including the Android Studio hosted Cinerific Standard Tablet AVD, adb launch/install commands, rotation checks, Create My Account screenshots, dropdown open-state screenshots, selected-state screenshots, and Gradle build output.

Baseline Status Before August 5 Work

- Cinerific entered August 5 with the August 4 Forgot Username/Password layout and rotation state preservation pass committed and logged.
- The native auth preview already supported Sign In, Create My Account, and Forgot Username/Password slide-in screens with remembered input state, dropdown values,

keyboard-aware landscape lift, dimmed focus states, Create Account avatar selection, and chevron return behavior.

- Rotation had been protected as state preservation on August 4, but the app layout was not visibly rotating when the user rotated the Android Studio AVD, so the orientation handling

needed a follow-up correction.

- The Create My Account birth month control still used the longer Month placeholder, while the user wanted the compact Mon label in the dropdown field.
- The Subscription Tier dropdown still used generic Option 1, Option 2, and Option 3 names instead of the actual product tier names.
- No tier artwork was available inside the Create My Account dropdown before the Figma Membership Tiers import, so the tier choices were text-only.
- The Figma file contained a Settings parent section with a Membership Tiers section that held separate Basic, Pro, and Rock Star components intended for reuse.
- The final Create My Account direction required preserving full framed tier imagery for future Settings screens while using art-only imagery and real names in the account creation dropdown.
- No August 5 root level Cinerific worklog PDF existed before this artifact generation pass.

Main Goals for August 5

- Make the Cinerific app layout rotate correctly again when the already-open Android Studio AVD rotates.
- Preserve the existing auth preview navigation and rotation state rules while removing the orientation behavior that prevented visible layout rotation.
- Change the Create My Account birth month placeholder from Month to Mon in both live state and saved snapshot restore fallback.
- Pull the Basic, Pro, and Rock Star Membership Tier imagery from Figma and store it as Android drawable assets.
- Remove the gray background/fill family from the imported tier assets, including exterior fill, interior box fill, and small gray pockets such as Basic house windows.
- Replace generic Subscription Tier options with Basic, Pro, and Rock Star while keeping Subscription Tier as the untouched placeholder before selection.
- Show tier imagery in the open dropdown and selected dropdown states without distorting the artwork, and keep full framed tier assets available for later Settings implementation.
- Compile, install, screenshot check, commit the source/snapshot work, and generate the latest PDF worklog artifact.

Work Completed - Rotation and AVD Behavior

- Removed the activity orientation configuration override from AndroidManifest.xml so Android could deliver actual layout changes again when the AVD rotated.
- Confirmed the package and launcher activity for the installed app as com.prahlincinerific.MainActivity before repeated adb relaunches.
- Corrected the local AVD orientation setting by ensuring ignore-orientation-request was disabled, so app-side fullSensor behavior was no longer masked by emulator policy.
- Rebuilt, installed, force-stopped, and relaunched Cinerific on the Cinerific Standard Tablet AVD after the orientation change.
- Preserved the August 4 native intro snapshot and saveable state machinery; the August 5 rotation fix focused on allowing the layout to rotate rather than removing state restoration.
- Verified that the fix was app-visible in the open Android Studio AVD instead of relying only on source inspection.

Work Completed - Create My Account Field Copy

- Changed the Create My Account month placeholder from Month to Mon in the native intro view constants.
- Updated CinerificIntroSnapshotSaver restore fallback from Month to Mon so restored and freshly initialized Create Account state stay consistent.
- Kept Day and Year placeholders unchanged and left the date dropdown option lists intact.
- Confirmed the closed Create My Account date row showed Mon in the emulator screenshot after rebuild and relaunch.

- Kept the change scoped to Create My Account date field presentation rather than altering date parsing or any future account creation data model.

Work Completed - Figma Membership Tier Asset Import

- Used the Figma MCP workflow against the Settings parent section and Membership Tiers section to identify the Basic, Pro, and Rock Star components.
- Exported the three tier components into drawable-nodpi PNG resources for Android use.
- Created full tier-card assets for Basic, Pro, and Rock Star that retain the roundish

framed tier treatment for future Settings screen work.

- Processed the exported PNGs to remove the repeated charcoal/gray fill colors from outside the boxes and inside the boxes, leaving transparency in those regions.
- Removed the same gray fill family from nested areas inside the artwork, including the gray Basic house window regions requested by the user.
- Cropped the full tier-card assets from their original export footprint to a tighter transparent 215 by 215 image around the roundish tier frame and artwork.
- Added separate art-only assets for Basic, Pro, and Rock Star by cropping away the frame and baked-in tier title, leaving only the house/tree, car, and crown/mic imagery.
- Verified the cleaned PNGs remained RGBA assets with transparent regions and no remaining pixels in the targeted gray-fill range.

Work Completed - Subscription Tier Dropdown Behavior

- Replaced Subscription Tier option text from Option 1, Option 2, and Option 3 to Basic, Pro, and Rock Star.
- Added legacy normalization so any saved Option 1, Option 2, or Option 3 value maps forward to Basic, Pro, or Rock Star without breaking older restored state.
- Preserved Subscription Tier as the placeholder before the user taps or chooses a tier.
- Added decoded bitmap references for the full framed tier images and the separate art-only tier images inside CinerificIntroView.kt.
- Drew large tier images in the open dropdown rows and later switched the Create My Account open dropdown to use art-only imagery wholesale, so each row reads as image plus tier name only.
- Drew the selected closed dropdown state with the art-only tier image on the left and the selected tier name on the right.
- Changed the bitmap drawing helper to preserve source aspect ratio when fitting the artwork into the dropdown field, avoiding stretched car, crown, microphone, house, or tree shapes.
- Scaled the open tier images up through the requested 200 percent and 300 percent passes, then kept row height aligned to the larger visual treatment.
- Kept the framed tier PNGs in the project for later Settings screens while using the art-only PNGs for Create My Account dropdown interaction.

Work Completed - Validation, Snapshot, and Commit State

- Ran `./gradlew :app:compileDebugKotlin` during the subscription tier implementation and after the final committed state; Kotlin compilation succeeded.
- Ran `./gradlew :app:assembleDebug` and `./gradlew :app:installDebug` while validating resource packaging and runtime behavior on the already-running AVD.
- Reinstalled the debug APK several times and used adb force-stop plus direct MainActivity launch so new drawable resources were visible in the emulator.
- Captured and visually inspected Create My Account screenshots for the Mon placeholder, the open Subscription Tier dropdown, the 200 percent and 300 percent tier image sizing, and selected Basic and Rock Star states.
- Confirmed the open dropdown displayed Basic, Pro, and Rock Star labels with tier imagery and no generic Option 1 through Option 3 text.
- Confirmed the selected closed dropdown displayed Basic and Rock Star as tier names with art-only images fitted at the left side of the field.
- Refreshed `cinerific_PROJECT_SNAPSHOT.txt` during the source pass so the repository snapshot reflected the current August 5 project state.
- Committed the source, assets, and refreshed snapshot on main as `b21da95`, Updated Create Account tiers and rotation behavior.

Validation and Checks Performed

- Used `pdftotext` and `pdftinfo` on the prior root level Cinerific PDFs before generating this artifact, with the closest style comparison against August 4.
- Ran `git status --short --branch` to confirm the repository was clean at main before creating this new PDF artifact.
- Ran `git log --oneline --decorate, git show --stat --summary HEAD, git show --name-status --summary HEAD, and git show --stat c1d1aa8..HEAD` to confirm the August 5 committed source scope.
- Ran `git diff --check HEAD` before PDF generation; it completed without whitespace errors.
- Ran `./gradlew :app:compileDebugKotlin` immediately before the worklog generation; Gradle reported BUILD SUCCESSFUL.
- Inspected file metadata for the membership tier PNG assets to confirm the full framed assets are 215 by 215 RGBA PNGs and the art-only variants are transparent RGBA crops.

- Used adb devices, adb shell cmd package resolve-activity, adb shell am start, adb shell input tap, adb exec-out screencap, and emulator screenshot inspection during the implementation pass.
- Generated this PDF with a small standard library PDF writer so the output remains text extractable and consistent with the prior root worklogs.

Files Touched During August 5

- app/src/main/AndroidManifest.xml: removed the activity orientation config override that was preventing visible layout rotation in the AVD.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt: updated the Create Account month snapshot restore fallback from Month to Mon.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt: updated month placeholder copy, imported tier bitmaps, normalized tier names, drew tier imagery in open and selected dropdown states, preserved Subscription Tier as placeholder, and fitted selected artwork without distortion.
- app/src/main/res/drawable-nodpi/membership_tier_basic.png: added cleaned full Basic tier component asset for future framed use.
- app/src/main/res/drawable-nodpi/membership_tier_pro.png: added cleaned full Pro tier component asset for future framed use.
- app/src/main/res/drawable-nodpi/membership_tier_rock_star.png: added cleaned full Rock Star tier component asset for future framed use.
- app/src/main/res/drawable-nodpi/membership_tier_basic_art.png: added art-only Basic house/tree asset for Create My Account dropdown use.
- app/src/main/res/drawable-nodpi/membership_tier_pro_art.png: added art-only Pro car asset for Create My Account dropdown use.
- app/src/main/res/drawable-nodpi/membership_tier_rock_star_art.png: added art-only Rock Star crown/microphone asset for Create My Account dropdown use.
- cinerific_PROJECT_SNAPSHOT.txt: refreshed generated project snapshot timestamp and source/resource inventory for the August 5 state.
- cinerific_worklog_august 5.pdf: new root level PDF worklog artifact for the August 5 pass, intentionally without a part suffix because no earlier August 5 part log existed.

Follow-Up Context

- The Create My Account Subscription Tier dropdown now presents user-facing plan names, but the flow remains a native mock/prototype rather than a connected account creation backend.
- Full framed Membership Tier PNGs remain available for the later Settings screens; Create My Account intentionally uses the separate art-only assets.
- Future Settings implementation should reuse the framed tier components instead of re-exporting them unless the Figma source changes.
- Future tier copy, pricing, or benefit descriptions can be layered into the Create My Account dropdown separately, but the August 5 committed state focuses on image and name presentation.
- Rotation should continue to be treated as layout resizing, with native intro state preservation kept from the August 4 pass and visible AVD layout rotation restored by the

August 5 correction.

- If emulator rotation appears stuck again, confirm the AVD ignore-orientation-request

setting before assuming the app source regressed.

- The user explicitly preferred direct AVD relaunch and screenshot verification after visual changes, so future dropdown and auth-preview work should keep using the same install, force-stop, launch, and capture loop.

Output Artifact

- Generated cinerific_worklog_august 5.pdf at the repository root using the established no-part filename convention for the first worklog on a date.
- The PDF uses the August 5, 2026 (U.S. EST) title/date requested by the user, even though the generation command was run after midnight local time.
- The artifact is intended to be committed after review alongside no other source edits from this documentation-only pass.
