

Cinerific Android App Work Log - July 28, 2026 Part 1 (U.S. EST)

Compiled summary for Tuesday, July 28, 2026 - Part 1 (U.S. EST) - focus: continuing the post-July-27 sign-in and detail-hero polish pass by reading the refreshed project snapshot and worklog history, recentering portrait detail favorite affordances around the Cinerific logo, preventing landscape detail heroes from exposing black right-side space, tightening the sign-in avatar/name/action stack across portrait and landscape layouts, replacing the old account prompt with Create Account, bold Sign In, and Forgot Password controls, turning Sign In into a mock form transition, centering the Username and Password fields, adding live text-input behavior, shrinking focused labels by 85 percent into the top-left of each field, sliding the focused form stack to the Cinerific logo centerline, pushing the logo upward differently in landscape and portrait, validating the work on the Cinerific tablet AVD, refreshing the project snapshot, and generating this latest Part 1 Cinerific PDF worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, and July 27: compact opening summary, source-material review, baseline state, goal list, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the current source state on main through HEAD 1a6966a, plus the refreshed snapshot and generated worklog artifact from this July 28 Part 1 pass, and follows the prior root-level naming, letter layout, footer convention, metadata, and plain-text-readable PDF style.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, and July 27.
- Used pdftotext output from all prior PDFs to preserve the established title pattern, opening-summary rhythm, source review style, baseline/goals sections, themed work-completed sections, validation language, files-touched list, follow-up close, output-artifact phrasing, footer convention, and four-page daily-log shape.
- Used pdfinfo on the latest July 27 PDF to confirm the letter page size, four-page count, metadata style, title/subject/author fields, PDF 1.4 output, and standard-library PDF generator convention.
- Ran ./read_project.sh and reviewed the refreshed cinerific_PROJECT_SNAPSHOT.txt so this worklog reflected the current Android source layout, worklog inventory, generated-file policy, drawable resources, and post-commit project state.
- Reviewed git status, git log, git show --stat, and git show --name-status around HEAD 1a6966a, the July 28 source commit titled Refined sign-in form flow and detail hero layout.
- Reviewed the current touched source files and generated artifact scope: CinerificIntroView.kt, CinerificApp.kt, CinerificDestinationScreen.kt, and cinerific_PROJECT_SNAPSHOT.txt.
- Reviewed the current implementation details around native intro drawing, custom View touch handling, input-method bridging, form-label animation state, form focus motion, favorite prompt overlay positioning, detail hero content scaling, and fallback Compose intro constants.
- Reviewed emulator verification evidence from the July 28 pass: landscape sign-in screenshots, centered form screenshots, focused-field screenshots with keyboard input, portrait wm-size spot-check screenshots, and detail-hero orientation checks.

Baseline Status Before July 28 Part 1

- Cinerific entered July 28 with the July 27 source state accepted on main through 0dedffc and the July 27 worklog committed afterward as d6fec29.
- The app already had stateful ratings, routed Home genre labels and chevrons, deduplicated movie/show catalogs, responsive portrait navigation, full-sensor sign-in rotation, standard-tablet sign-in backgrounds, black-to-purple intro timing, and hollow gradient avatar bubble resources.
- Detail hero favorite stars and the full-favorites prompt existed, but portrait movie/title heroes still needed the favorite star, its animation, and the error/prompt box vertically centered to the Cinerific logo rather than sitting at the earlier landscape-oriented top placement.
- Landscape detail heroes could still expose an unwanted black vertical region on the right side when the image fit behavior preserved the full asset instead of filling the available hero area.
- The sign-in avatar/name stack had the accepted gradient-bubble treatment, but the user wanted smaller avatar icons, reduced avatar-to-name spacing, careful preservation of the logo position, and tighter landscape vertical distribution.
- The sign-in action text was still evolving from a single I need an account prompt toward a more realistic three-action row with Create Account, Sign In, and Forgot Password.
- Sign In did not yet open a mock sign-in form; avatar taps still represented the primary way to enter the app.
- No live username/password input existed inside the native intro view, so any form treatment had to be added inside a custom canvas-based View rather than by placing ordinary Compose TextFields over the intro.

Main Goals for July 28 Part 1

- Recenter detail hero favorite controls and full-prompt feedback against the Cinerific logo in portrait mode while preserving landscape behavior.
- Stop landscape hero artwork from leaving a black vertical box or gutter on the right side of movie/title hero surfaces.
- Tighten the sign-in avatar stack without moving the established logo position, including 20 percent smaller avatar bubbles and reduced avatar/name gaps.
- Keep portrait sign-in stack placement stable while making landscape vertical spacing more even and more compact.
- Replace I need an account with Create Account, bold Sign In, and Forgot Password, with the secondary actions anchored to the left and right edges of the avatar stack.
- Make tapping Sign In open a mock sign-in screen where the avatar/name/action stack moves downward and fades away while username/password fields rise and fade in.

- Center the form fields horizontally and make field taps focus the selected field, bring up text input, and render typed content directly in the native intro canvas.
- Animate field labels to shrink by 85 percent and move into the top-left corner of each field when focused or populated.
- On field focus, slide the form stack to the Cinerific logo's vertical center position while pushing the logo up; make the logo fully exit in landscape while only moving upward in portrait.

Work Completed - Detail Hero Favorite Placement and Image Fill

- Added a shared detail-hero logo center constant so portrait favorite controls and the full-prompt overlay could align to the Cinerific logo's vertical center instead of relying on the old fixed star Y position.
- Passed the current destination into FavoritesFullPromptOverlay so the overlay can treat ProgramDetails portrait screens differently from other app surfaces.
- Repositioned the favorites-full prompt bubble in portrait ProgramDetails views by centering its height on DETAIL_HERO_LOGO_CENTER_Y.
- Added an isPortrait calculation inside CinerificProgramDetailsScreen and threaded it into ProgramDetailRevealImage.
- Switched detail hero image behavior by orientation: portrait continued to fit the artwork, while landscape used crop scaling so the hero filled the available area and avoided right-side black space.
- Updated HeroFavoriteToggleButton to accept a centerVerticallyOnLogo flag and use the logo-centered Y coordinate only in portrait detail heroes.
- Kept the favorite burst padding and bounce animation intact while moving the portrait anchor, so the visual feedback still expands around the star rather than around the old top coordinate.

Work Completed - Sign-In Avatar Stack and Account Prompt Row

- Scaled the four sign-in avatar bubble targets from the prior 220 px size to 176 px, preserving the visual order and center positions across Steve, Martin, Janny, and Guest.
- Halved the vertical gap between avatar character bubbles and their name images by moving the name row upward to the new SIGN_IN_NAME_TOP baseline.
- Shifted the combined avatar/name/action stack upward while maintaining the absolute Cinerific logo placement already shown in the settled sign-in screen.
- Added separate portrait and landscape stack-shift constants so portrait placement could remain stable while landscape spacing could be narrowed and balanced.
- Replaced the previous account prompt with three Manrope labels: Create Account, Sign In, and Forgot Password.
- Made Sign In visibly bold using a dedicated bold/stroked paint in the native intro view and FontWeight.Black in the fallback Compose path.
- Anchored Create Account to the left avatar-stack edge and Forgot Password to the right avatar-stack edge, with Sign In centered between them.
- Kept Create Account and Forgot Password at 80 percent of the Sign In text size and vertically centered them against the Sign In baseline.
- Mirrored the same sign-in stack constants and prompt-row treatment into the dormant Compose intro helpers so fallback paths stay visually aligned with the active native intro view.

Work Completed - Mock Sign-In Form Transition

- Added Sign In hit-testing to the native intro view so tapping the bold Sign In prompt opens a mock sign-in form instead of falling through to the old default Guest avatar navigation path.
- Changed performClick behavior so only an actual avatar tap invokes onAvatarSelected, preventing non-avatar prompt taps from entering Home/default accidentally.
- Added a mock sign-in transition clock and easing path that moves the avatar/name/action stack downward while fading it out.
- Drew the mock form as two rounded translucent outline fields labeled Username: and Password: in Manrope, initially rising and fading into view as the avatar stack exits.
- Centered the Username and Password field stack horizontally within the 1194 px Figma stage rather than keeping the fields hard-positioned on the right.
- Preserved the Cinerific logo through the first Sign In transition so the form appears beneath the established brand mark rather than replacing the whole intro surface.
- Added hit-testing for both mock form fields using the same stage metrics, form X, form Y, focus shift, and scale math used by the drawing path.

Work Completed - Form Input, Floating Labels, and Focus Motion

- Made CinerificIntroView act as a text editor only after the mock sign-in screen is active, using onCheckIsTextEditor and onCreateInputConnection.
- Added a custom BaseInputConnection for username/password text entry, composing text replacement, finishComposingText, deleteSurroundingText, editor actions, and soft-keyboard key events.
- Added hardware/ADB key handling through onKeyDown and onKeyMultiple so automated emulator input and physical-keyboard style events both update the custom canvas text fields.
- Stored username and password text separately, limited mock input length, displayed password text as masked asterisks, and drew a caret at the end of the visible field text.
- Animated each label independently from centered placeholder text into a top-left floating label whenever its field is focused or already contains text.
- Corrected the requested shrink behavior so the floating labels use 15 percent of their original text size, representing an 85 percent shrink rather than a 75 percent remaining scale.
- Added a focus-stage animation that begins when a mock field is tapped and slides the entire form stack upward until the stack center reaches the original Cinerific logo vertical centerline.
- Pushed the Cinerific logo upward during the same focus-stage motion. Landscape uses a stronger logo shift so the logo fully exits the screen; portrait uses the proportional form-focus shift so the logo moves up but remains visible.
- Matched the moving form hit boxes to the moving draw coordinates so field taps continue to work while the stack is transitioning.

Work Completed - Validation, Snapshot, and Commit State

- Built the app repeatedly during the July 28 sign-in and detail-hero pass with `./gradlew :app:assembleDebug`.
- Installed debug APKs to Cinerific_Standard_Tablet and relaunched `com.prahlincinerific` through adb after implementation steps that affected runtime touch behavior.
- Verified the mock Sign In transition in landscape, including avatar/action stack fade-out, centered form display, username field focus, soft keyboard appearance, and typed testuser rendering.
- Verified that the focused landscape form stack moved into the logo band and that the Cinerific logo fully exited the top of the screen when a field was focused.
- Used a temporary adb wm size 1600x2560 portrait override to spot-check portrait behavior on the standard tablet AVD after the rotation framebuffer resisted ordinary `user_rotation` changes.
- Verified in portrait that the focused form stack rose to the original logo centerline while the Cinerific logo moved upward but remained visible.
- Reset the temporary adb wm size override after the portrait spot-check and restored the standard tablet emulator display state.
- Committed the source work on main as HEAD 1a6966a with the message Refined sign-in form flow and detail hero layout.
- Ran `./read_project.sh` again for this worklog pass so `cinerific_PROJECT_SNAPSHOT.txt` reflected the latest project tree and worklog inventory.
- Ran `./gradlew :app:assembleDebug` during this artifact pass; the current debug build completed successfully.

Validation and Checks Performed

- Converted all pre-existing Cinerific worklog PDFs to text with `pdftotext` and inspected line/word counts to preserve the existing length band and structure.
- Inspected the July 15 Part 1 PDF as the closest naming precedent for this artifact's lowercase part label and Part 1 title wording.
- Inspected the July 27 PDF as the latest mature template for source-review detail, HEAD reference style, four-page layout, and output-artifact wording.
- Ran `pdftotext cinerific_worklog_july 27.pdf` to verify title metadata, author/creator/producer fields, letter geometry, PDF version, and page count.
- Ran `git log --oneline --decorate, git show --stat --format=fuller HEAD, git show --name-status HEAD, git status --short --branch, and git diff --stat HEAD` to confirm that HEAD 1a6966a contains the July 28 source changes and that no source diff remained before snapshot/worklog generation.
- Ran `./read_project.sh` before generating this PDF, which refreshed `cinerific_PROJECT_SNAPSHOT.txt` at the repository root.
- Ran `./gradlew :app:assembleDebug` after the snapshot refresh; the build completed successfully with BUILD SUCCESSFUL.
- Ran `git diff --check` after the snapshot refresh and confirmed that remaining warnings came from generated snapshot source-dump whitespace, not from Kotlin source changes. The generated snapshot was mechanically cleaned after the final refresh.
- Generated this PDF with a small standard-library PDF writer so the output remains text-extractable and consistent with prior Cinerific worklogs.

Files Touched During July 28 Part 1

- `app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt`: active native sign-in stack sizing, account prompt row, Sign In hit testing, mock form transition, centered username/password fields, form focus, input-method bridge, typed text rendering, floating labels, password masking, focus-stage form motion, and logo push behavior.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt`: fallback Compose intro constants and prompt-row visuals, plus portrait ProgramDetails full-favorites prompt positioning against the logo center.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt`: portrait detail favorite star vertical centering, orientation-aware detail hero content scale, and hero image crop behavior for landscape.
- `cinerific_PROJECT_SNAPSHOT.txt`: refreshed generated snapshot reflecting the current July 28 project state and worklog inventory.
- `cinerific_worklog_july 28 part 1.pdf`: this Part 1 (U.S. EST) worklog artifact generated at the repository root.

Follow-Up Context

- The mock sign-in form is intentionally a prototype surface. It accepts local username/password input and animations, but it does not yet authenticate, validate, store credentials, or route to a real account session.
- Create Account and Forgot Password are visually placed and anchored, but they do not yet open their own mock or real flows.
- The custom View input bridge is now sufficient for soft keyboard, ADB text, hardware-style key events, backspace, next/done, caret rendering, and password masking. Future edits should preserve the single coordinate source for draw and hit-test math.
- The active sign-in view still depends on the standard tablet background resources and stage scaling. Any future small/wide or large/narrow sign-in background expansion should reuse the same orientation-aware stack constants.
- Portrait detail favorite centering depends on `DETAIL_HERO_LOGO_CENTER_Y`. If the detail logo asset or logo placement changes, the portrait star and prompt center should be recalculated with that same source of truth.
- The generated avatar resources still carry `_test` naming from the July 27 accepted visual pass. A future cleanup can promote accepted gradient-bubble avatars to final names after the sign-in design settles.
- Generated PDFs and snapshots remain project-management artifacts unless explicitly committed after review.

Output Artifact

- Filename: cinerific_worklog_july 28 part 1.pdf
- Created at the repository root in /Users/prahlin/gh/cinerific.
- Covers Tuesday, July 28, 2026 Part 1 (U.S. EST) Cinerific work and uses the lowercase part naming precedent established by cinerific_worklog_july 15 part 1.pdf.
- Follows the Cinerific filename convention established by cinerific_worklog_july 12.pdf and continued by the July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, and July 27 artifacts, including the space before the day number.
- Follows the established Alla Vostra/Prahlín/Cinerific daily worklog structure while keeping the body content specific to Cinerific work completed during the July 28 Part 1 session.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: cinerific_worklog_july 28 part 1.pdf.
