

Cinerific Android App Work Log - July 22, 2026

Compiled summary for Wednesday, July 22, 2026 - focus: documenting the post-July-20 Cinerific title-art and motion pass: importing high-visibility movie/show card and hero artwork from Figma, replacing lower-quality card sources with sharp WebP resources, wiring catalog and detail actionability, creating reusable hero navigation controls, rebuilding the Figma loading spinner behavior, implementing category-specific favorites population and removal, adding favorite-star celebration motion, importing four presentation-title animation sets, syncing those animations to the Home hero reels, and generating the latest Cinerific daily worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, and July 20: compact opening summary, source-material review, baseline state, goal list, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the current source state now present on main through HEAD 204353b and follows the prior root-level PDF naming, four-page letter layout, footer convention, and plain-text-readable style.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: cinerific_worklog_july 12.pdf, cinerific_worklog_july 14.pdf, cinerific_worklog_july 15 part 1.pdf, cinerific_worklog_july 15.pdf, cinerific_worklog_july 16.pdf, cinerific_worklog_july 18.pdf, cinerific_worklog_july 19.pdf, and cinerific_worklog_july 20.pdf.
- Used pdftotext and pdfinfo output from the prior PDFs to preserve the established title pattern, opening-summary cadence, source review, baseline/goals sections, themed work-completed sections, validation language, files-touched list, follow-up close, letter-size page geometry, and four-page daily-log shape.
- Reviewed read_project.sh and cinerific_PROJECT_SNAPSHOT.txt for the current scanner convention, Android source layout, binary resource inventory behavior, generated snapshot expectations, and prior-session onboarding pattern.
- Reviewed the current Git state on main tracking origin/main. Before this PDF artifact was generated, git status was clean at HEAD 204353b.
- Reviewed git log and git show --stat for the post-July-20 commits: e8cb0b8 for WebP title cards and detail navigation, a62b060 for reusable hero navigation controls, 9dd9c64 for Figma spinner motion, 78b194b for favorites-full prompt behavior, 801695b for favorite-star celebration animation, and 204353b for hero reel presentation title animations.
- Reviewed app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt, CinerificDestinationScreen.kt, CinerificHomeScreen.kt, CinerificLoadingSpinner.kt, HeroPresentationTextAnimation.kt, the current drawable-nodpi resource inventory, and the refreshed project snapshot.
- Reviewed the Figma-driven session work around file key qbpfnwBirp0WoOHSqw1TN, including Movie Title Cards, show title cards, Animations (Original), Loading Spinner Animation, favorite/remove controls, the favorites-full prompt, and the four presentation component sets.
- Used Gradle build output, adb install/launch checks, AVD screenshots, local image inspection, Figma plugin/MCP inspection notes, Git status/log/show output, and PDF text extraction as validation material. No external PDF package was installed for this worklog.

Baseline Status Before This Pass

- Cinerific entered this pass with the July 20 Settings, localization, Auto log out, playback-session exception hook, and first Sink or Swim detail-screen route already committed and documented.
- The title-card pipeline still needed source-quality Figma exports. Earlier card images included lower-resolution or temporary crops, and Sink or Swim had just exposed the need to distinguish true Figma quality from simple upscaling.
- Movie and show catalog cards existed across Home, Movies, and Shows, but many cards still lacked high-visibility card/hero pairs, stable naming, and detail navigation behavior.
- Troublemaker and One Last Breath specifically needed actionability fixes after the broader title-card wiring pass exposed cards that rendered but did not open their corresponding hero/detail view.
- The detail hero surface still lacked reusable Figma-derived Prev, Play, Next, and Favorite controls. Favorite state existed conceptually but was not yet expressed as a reusable hollow/yellow star component tied to app state.
- The loading behavior requested by the prototype required a red spinner during the grayed/dim hero image phase, while hero controls needed to wait until the full-visibility hero variant appeared.
- Favorites still needed functional population: tapping a yellow favorite star had to place the correct movie or show card into the matching placeholder row, and a remove/minus button had to unmark that same title.
- The favorites-full warning from Figma needed category-aware behavior so the prompt appears only when the relevant movie or show favorites row already has five filled placeholders.
- The Home hero reel was already looping four raw video clips, but it did not yet show the custom-font Figma presentation title animations tied to the corresponding reels.

Main Goals for July 22 Artifact Scope

- Identify the high-visibility movie and show title-card sources in Figma without requiring every component node to be manually linked by the user.
- Export and keep sharp card and hero artwork as WebP resources using the established lower_snake_case naming convention: title_card.webp and title_hero.webp.
- Wire card resources into Home, Movies, Shows, Favorites, and detail surfaces so tapping a visible card opens the expected grayed-to-visible hero route.
- Create reusable hero control components for favorite and transport navigation, then bind them to stateful favorite, previous, play, and next behavior.
- Recreate the Figma loading spinner from standalone red-star, white-wheel, and mini-star assets, preserving the different part directions/speeds while keeping the layered center stable.
- Show the spinner only during the dim hero loading phase and keep Play/Favorite/Prev/Next controls hidden until the full-visibility hero is displayed.
- Populate Favorites placeholders from successful favorite actions, support minus-button removal, and keep movie/show capacity checks separate.
- Add a fast favorite-star bounce and yellow ray burst on successful favorite actions without playing the celebration when an already-favorited item is removed.
- Import the Light As Air, Infatuation, Into The Wild, and Morbid Temptations presentation variants and mimic their Figma prototype timing over the Home hero reels.
- Build, install, AVD-check, refresh snapshots during the implementation commits, and document the current source state in a latest daily worklog PDF.

Work Completed - Title Card and Hero Artwork

- Located the requested Movie Title Cards - Coded for un-favoriting and removal section and verified numbered Card nodes under the Movie Previews frame before importing production assets.
- Proved the Sink or Swim export path first, then corrected the import from the dark/greyed low-visibility source to the normal high-visibility source inside the same Figma component.
- Compared the full-screen hero image against the card version and established that the app should keep separate card and hero exports because the Home/Movies cards and the tapped detail hero use different dimensions/aspect presentations.
- Standardized Sink or Swim to sink_or_swim_card.webp and sink_or_swim_hero.webp, then removed the earlier PNG hero resource as part of the WebP-only title-art direction.
- Imported high-visibility card and hero WebP pairs for the broader movie/show library now represented in drawable-nodpi, replacing older figma_card_*.jpg and home_* PNG crops where the new source-quality assets superseded them.
- Preserved the agreed card/hero naming convention across titles such as One Last Breath, Troublemaker, Ignition, The Baller, Help, No Trespassing, Hungry Heart, Breathing, Moments, Wheels, and the other currently wired catalog entries.
- Kept card assets scoped for Home/Movies/Shows/Favorites display while hero assets are used by the tapped detail experience, preserving visual sharpness and avoiding stretched single-source reuse.

Work Completed - Catalog and Detail Actionability

- Created commit e8cb0b8, Wired WebP title cards into catalog/detail navigation, as the first post-July-20 source checkpoint after the July 20 worklog artifact.
- Updated Home rows to use the new card resources and mapped card drawable IDs back to program titles so the Home screen can route real cards into detail views.
- Expanded destination program specs so Movies and Shows cards can expose both card artwork and detail hero artwork through shared data instead of one-off special cases.
- Fixed non-actionable Troublemaker and One Last Breath cards so tapping those visible cards now opens their corresponding program hero/detail screen.
- Preserved the detail reveal pattern established by Sink or Swim: a grayed hero image appears first, then transitions to the full-visibility hero after the loading phase.
- Kept previous and next title lookup based on the current program title so detail navigation can move through the current catalog sequence without hardcoding each button target.

Work Completed - Hero Navigation Controls

- Studied the One Last Breath component in the movie title-card section to locate the Prev, Play, Next, and Favorite button artwork and its Figma prototype behavior before breaking controls into reusable app components.
- Imported the inactive favorite, active yellow favorite, previous, play, and next PNG controls into drawable-nodpi with clear hero_control_* names.
- Created commit a62b060, Added reusable hero navigation controls, with reusable favorite toggle and transport-control components inside CinerificDestinationScreen.kt.
- Changed the inactive favorite control fill to plain white for improved visibility against dark and dimmed hero images while preserving the yellow active-star state.
- Wired favorite state so tapping the hollow star marks the current movie/show as favorited, and tapping the active yellow star removes that title from favorites.
- Wired previous and next buttons to adjacent program detail routes and connected Play to the existing playback-session controller hook so future user-started playback can suspend idle logout.

Work Completed - Spinner Assets and Loading Motion

- Imported the Loading Spinner Animation variants from the Animations (Original) section and confirmed their transparent-background treatment after removing the unwanted solid background.
- Separated the red star, white circle/ellipse wheel, and yellow mini-star assets from the full spinner frames so the app can animate each part independently instead of relying on static PNG frames.
- Created centered standalone spinner assets using animation_variant_6.png as the closest reference for the three parts being vertically and horizontally aligned.
- Created CinerificLoadingSpinner.kt and commit 9dd9c64, Matched Figma Spinner Motion, to mimic the original variant-chain motion with different directions/speeds for the red star, white wheel, and mini-star.
- Changed detail loading behavior so the red spinner appears and spins during the grayed hero phase, then disappears when the full-visibility hero image is available.
- Corrected the earlier layering issue where Play and Favorite controls appeared during the dimmed hero. Those controls now appear only with the fully visible hero state.

Work Completed - Favorites Population and Removal

- Studied the Movie Favorites - Coded for un-favoriting & removal section and located the round minus/remove button used on favorited cards.
- Imported favorite_remove_button.png with a transparent background so only the round minus button is visible, without black or gray pixels around it.
- Created commit 78b194b, Implemented favorites-full prompt behavior, with category-specific favorite capacity checks and the Figma-inspired warning overlay.
- Changed Favorites from empty-only placeholders into stateful movie and show placeholder rows populated by the titles currently marked as favorites.
- Added a small minus/remove overlay to favorited cards on the Favorites screen. Tapping it removes that card from Favorites and unmarks the matching detail hero star back to hollow.
- Kept movie and show favorite slots independent, so filling five movie placeholders does not block show favorites and filling five show placeholders does not block movie favorites.
- Implemented the You have filled up on favorites prompt so it appears only when the relevant category already has five filled placeholders and the user tries to favorite another title in that same category.

Work Completed - Favorite Celebration Motion

- Created commit 801695b, Added favorite star celebration animation, to make the favorite interaction feel closer to the prototype and less like a static state flip.
- Added a fast two-pop bounce when a hollow favorite star successfully turns yellow, starting the animation immediately on tap and removing the extra final bounce after user review.
- Drew yellow burst strokes from the active favorite star points, with paired rays shooting outward from each side and rapidly fading.
- Limited the celebration to successful hollow-to-yellow favorite changes so removing a favorite, blocked capacity attempts, and already-active state cleanup do not replay the celebratory burst.

Work Completed - Home Presentation Title Animations

- Located the Light As Air Presentation, Infatuation Presentation, Into The Wild Presentation, and Morbid Temptations Presentation components in the Animations (Original) section and enumerated their seven variants before import.
- Imported all twenty-eight presentation variant PNGs into drawable-nodpi using title_presentation_default.png and title_presentation_variant_N.png naming.
- Studied the prototype behavior for each presentation set: Default to Variant2, Variant2 to Variant3, Variant3 to Variant4, Variant4 to Variant5, Variant5 to Variant6, and Variant6 to Variant7, all using Change To with Smart Animate and ease-in-out-back.
- Matched the Figma timing profile in code: 0.8 second waits between most variants, a 1.2 second wait before Variant5, and 3 second transitions for each state change.
- Created HeroPresentationTextAnimation.kt as one reusable component with per-title frame lists, stable viewports, 2x export sizing, alpha/scale interpolation, and a custom Figma-style ease-in-out-back easing curve.
- Updated CinerificHomeScreen.kt so LoopingHeroVideoView reports the active raw-video index back to Compose, allowing the overlay to reset and switch presentation titles when each Home hero reel advances.
- Mapped the four Home reels in the requested order: Light As Air, Infatuation, Into The Wild, and Morbid Temptations.
- Created commit 204353b, Added hero reel presentation title animations, after build and AVD visual verification showed the overlay rendering and advancing over the Home reel.

Validation and Checks Performed

- Ran ./gradlew :app:assembleDebug after the hero presentation animation implementation; the debug build completed successfully.
- Ran ./gradlew :app:installDebug and installed the debug APK on emulator-5554, the Cinerific_Standard_Tablet Android virtual device.

- Launched `com.prahlincinerific.MainActivity` through adb and used the profile selection flow to reach the Home screen in the running app.
- Captured AVD screenshots confirming the presentation overlay rendered over the active hero reel and later advanced to another title/reel state.
- Earlier implementation commits in this range were also built, installed, relaunched, screenshot-checked, and snapshot-refreshed as recorded by their commit messages and project snapshot changes.
- Confirmed git status `--short --branch` was clean at `main...origin/main` before creating this PDF artifact.
- Ran `git diff --stat 1673918..HEAD` and `git diff --name-status 1673918..HEAD` to verify the post-July-20 source/resource scope described by this worklog.
- Read all pre-existing Cinerific worklog PDFs before producing this artifact so the new worklog follows the established naming, structure, length, and content type.

Files Touched During This Artifact Scope

- `app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt`: app-level favorites state, category-specific capacity prompt triggering, playback-session propagation, and favorites-full overlay behavior.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt`: expanded program specs, card/detail artwork wiring, grayed-to-visible hero reveal, spinner/control layering, hero controls, favorites placeholders, minus removal, and favorite celebration animation.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt`: Home row WebP card mapping, program-title routing, hero reel index callback, and presentation overlay integration.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificLoadingSpinner.kt`: new reusable loading spinner component built from the separated red-star, wheel, and mini-star assets.
- `app/src/main/java/com/prahlin/cinerific/ui/HeroPresentationTextAnimation.kt`: new reusable Home hero presentation-title animation component.
- `app/src/main/res/drawable-nodpi/*_card.webp` and `*_hero.webp`: high-visibility movie/show title-card and hero artwork now used by catalog, Favorites, and detail surfaces.
- `app/src/main/res/drawable-nodpi/hero_control_*.png`: imported favorite and transport navigation controls.
- `app/src/main/res/drawable-nodpi/loading_spinner_*.png`: full spinner frames plus separated/recreated red-star, wheel, and mini-star component assets.
- `app/src/main/res/drawable-nodpi/favorite_remove_button.png` and `favorites_full_prompt.png`: Figma-derived removal button and favorites-capacity prompt reference asset.
- `app/src/main/res/drawable-nodpi/*_presentation_*.png`: twenty-eight presentation title animation variants for Light As Air, Infatuation, Into The Wild, and Morbid Temptations.
- `cinerific_PROJECT_SNAPSHOT.txt`: refreshed by the implementation commits to reflect the current source/resource inventory.
- `cinerific_worklog_july 22.pdf`: this generated daily worklog artifact at the repository root.

Follow-Up Context

- The presentation animation implementation uses imported PNG variant states plus alpha/scale interpolation to approximate Figma Smart Animate. A deeper future pass could recreate individual text-layer motion if the exact font/layout vectors become available in code.
- The Home hero presentation overlay is visually verified on the current tablet AVD, but exact placement can still be tuned against fresh Figma screenshots if the user wants tighter alignment for each reel.
- The title-card/hero naming convention is now established. Future title imports should continue using `title_card.webp` and `title_hero.webp` and should avoid dark/greyed component states unless the asset is explicitly for loading.
- Favorites are stateful for the active session. Persisting favorite selections across app restarts remains a future DataStore or local-storage task if the prototype graduates from transient demo state.
- The current Auto log out timeout remains the July 20 validation value unless changed in a later pass. Before production, restore the intended longer timeout and connect real playback screens to the playback-session controller.
- Generated worklog PDFs remain subject to the project ignore policy unless explicitly force-added, while the source state documented here is already committed and aligned with `origin/main` at HEAD 204353b.

Output Artifact

- Filename: `cinerific_worklog_july 22.pdf`
- Created at the repository root in `/Users/prahlin/gh/cinerific`.
- Follows the Cinerific filename convention established by `cinerific_worklog_july 12.pdf` and continued by the July 14, July 15, July 16, July 18, July 19, and July 20 artifacts, including the space before the day number.
- Follows the established Alla Vostra/Prahlincinerific daily worklog structure while keeping the body content specific to the current Cinerific work now present on main.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: `cinerific_worklog_july 22.pdf`.
