

Cinerific Android App Work Log - July 27, 2026

Compiled summary for Monday, July 27, 2026 - focus: making the detail hero rating stacks interactive and stateful, routing Home/default carousel genre labels and chevrons into the correct Movies or Shows catalog view, removing movie/show and genre duplicate conflicts, tuning the loading spinner into three clockwise speed layers, refining selected nested mode-navigation glyph spacing, adapting Home, detail, catalog, Favorites, and Settings layouts for tablet portrait rotation, moving portrait navigation to an always-visible bottom bar, preserving app state across rotation, restoring full four-way rotation on the sign-in screen, replacing the old red intro color with a black-to-purple sign-in transition, implementing standard-tablet portrait and landscape sign-in backgrounds, layering the settled background at 50 percent over pure black, experimenting with transparent avatar-bubble treatments, applying hollow 50-to-0 percent gradient bubble fills to all four sign-in avatars, validating the debug build and runtime AVD behavior, refreshing the project snapshot, and generating the latest Cinerific daily worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, and July 25: compact opening summary, source-material review, baseline state, goal list, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the current source state on main through HEAD 0dedffc, plus the refreshed snapshot from this worklog pass, and follows the prior root-level naming, letter layout, footer convention, metadata, and plain-text-readable PDF style.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, and July 25.
- Used pdftotext and pdfinfo output from the prior PDFs to preserve the established title pattern, summary cadence, section order, validation language, file-list style, letter-size geometry, metadata, footer, and plain-text-readable layout.
- Ran ./read_project.sh and reviewed the refreshed cinerific_PROJECT_SNAPSHOT.txt for the current Android source layout, drawable inventory, generated avatar/background resources, worklog inventory, screenshot folders, and scanner convention.
- Reviewed git status, git log, git show --stat, git diff --stat, and git diff --name-status for the July 27 commit sequence: 693b90b, 14695a6, 5a1f351, 86cee20, d581531, and 0dedffc, with context from the July 25 worklog commit 6041bca.
- Reviewed CinerificApp.kt, CinerificDestinationScreen.kt, CinerificHomeScreen.kt, CinerificIntroView.kt, CinerificLoadingSpinner.kt, CinerificRightSideNavBar.kt, CinerificViewportModeNav.kt, CinerificViewportNavBar.kt, MainActivity.kt, AndroidManifest.xml, and the drawable-nodpi avatar/sign-in resources touched during the July 27 pass.
- Reviewed generated mockup and runtime screenshot folders for sign-in backgrounds, orientation debugging, and avatar transparency experiments, including the final all-avatar sign-in screenshot used to verify the gradient-bubble treatment.
- Reviewed emulator and adb evidence from the rotation work: display rotation settings, ignoreOrientationRequest state, fullSensor runtime orientation, forced rotation screenshots, and toolbar-equivalent adb emu rotate checks.
- Reviewed user feedback from the July 27 design pass, including star-stack visibility/stroke/rounding requests, Home genre navigation behavior, portrait-mode appearance screenshots, Settings-screen typography/alignment requests, sign-in background cleanup, intro timing, and avatar bubble opacity experiments.

Baseline Status Before July 27 Work

- Cinerific entered July 27 with the July 25 Home hero routing, detail 25 percent info-panel layout, spinner normalization, Manrope content typography, and responsive tablet test profile work accepted.
- Detail hero rating stars were visually present, but the user still needed direct tap-to-rate behavior, lower unrated visibility, state persistence across title navigation, and rounded/stroked custom-star rendering that did not clip.
- Home/default carousels showed genre names and right-side chevrons, but those elements did not yet route into the matching nested catalog genre view on Movies or Shows.
- Movies and Shows still allowed duplicate title/category conflicts in some edge cases, including Hungry Heart appearing as both a movie and a show.
- The layered Cinerific loading spinner concept was accepted, but the user wanted separate clockwise rotation speeds for the red star, white wheel, and yellow inner star.
- Portrait rotation work had started on the intro screen only; Home, destination, catalog, Favorites, Settings, nested navs, list cards, title banners, bottom clearance, and sign-in state still needed broader rotation-safe behavior.
- The sign-in screen used the original intro color/background treatment and original opaque avatar bubble art, before the later purple-black background, full-sensor rotation, and transparent/gradient avatar experiments.
- The Cinerific_Standard_Tablet AVD could display forced rotations, but the emulator itself had rotation-lock and ignore-orientation-request settings that could make app-side rotation fixes appear ineffective.

Main Goals for July 27

- Make the five-star rating stacks tappable, visibly fill to the selected rating, persist per title, and remain visually restrained before user rating.
- Route Home/default carousel genre labels and right-side chevrons into CollageSmall mode on the correct Movies or Shows screen, using the carousel majority to pick destination type.
- Remove movie/show and genre-related duplicate conflicts so a title appears in only one category path when data overlaps.
- Tune nested viewport-mode buttons, spinner layer speeds, and selected glyph spacing so active controls read cleanly in compact mode navs.
- Preserve every screen's look and state across tablet rotation, especially portrait Home/default, detail heroes, bottom nav, catalog nested navs, list mode, Favorites, and Settings.
- Expand and align portrait destination title banners, nested navs, settings label stacks, language dropdowns, sign-out controls, and list-view text/card stacks to avoid clipping and dead zones.
- Replace the sign-in intro's red/burgundy background motion with black-to-purple timing, add the standard-tablet sign-in background assets, and make the final settled image read over true black.
- Restore general sign-in rotation by enabling full-sensor orientation and fixing emulator rotation policy, then validate portrait/landscape/reverse rotation behavior.
- Prototype and implement a unified avatar bubble treatment: circular gray outline retained, interior fill hollowed into a 50-to-0 percent opacity gradient behind each character.

Work Completed - Ratings, Catalog Routing, and Dedupe

- Made detail-screen five-star stacks tappable so a tap on the second star fills two yellow stars and leaves the remaining stars gray, with the same direct mapping for each star quantity.
- Restored rated-star opacity to full visibility after active user selection while keeping unrated stacks low-visibility.
- Iterated the unrated star opacity from 0.5 to 0.33 to 0.2, then split stroke and fill visibility so low-visibility stars could stay subtle without disappearing unevenly.
- Added rounded custom-star drawing and made the transparent and gray outer strokes follow the rounded star shape rather than the old sharp-point outline.
- Reduced the outer gray stroke from 5 px to 3 px, reduced star-stack size by 10 percent, and expanded bounds so stroked stars no longer clipped through invisible bottom edges.
- Persisted user ratings by program title so selections survive moving between movies/shows and navigating to other app areas.
- Wired Home carousel genre names and right-side chevrons to open the matching nested genre in CollageSmall view on Movies or Shows, choosing the destination by whether that carousel contains more movies or shows.
- Added catalog route state and initial genre/mode support so Movies and Shows can open directly into a requested genre and mode.
- Removed movie/show and genre duplicates by constraining conflicting titles to one category path, preventing entries such as Hungry Heart from appearing as both a movie and a show.

Work Completed - Spinner and Nested Mode Controls

- Split the loading spinner into independent rotation speeds for its three visible layers rather than one shared timing value.
- Preserved clockwise motion for every layer and settled the final requested speed distribution at red star 100 percent, white wheel 67 percent, and yellow inner star 33 percent.
- Rechecked the white wheel direction after it appeared to move counterclockwise, then kept all layer math in clockwise rotation while reducing speed ratios.
- Refined selected nested viewport-mode buttons after the active white state made glyphs look cramped.
- Scaled the selected CollageSmall nine-square glyph stack down by 10 percent inside its active border.
- Compressed the selected List glyph horizontally while preserving its vertical size so left padding beside the square stack and right padding beside the rectangle stack matched the top/bottom padding.
- Left inactive mode glyphs and large-collage sizing unchanged, keeping the fix scoped to active nested mode button appearance.

Work Completed - Portrait Rotation, Navigation, Detail, and Settings

- Started rotation work on the intro animation screen so the user could manually rotate the AVD and inspect behavior before broadening the scope.
- Reworked Home/default portrait layout after screenshot review: adjusted hero sizing, carousel sizing, stack spacing, bottom clearance, and visible content density for tablet portrait mode.
- Moved the right-side nav rail to a bottom navigation bar in portrait, kept it open at all times, and removed burger/toggle dependence for portrait navigation visibility.
- Matched opened movie/show detail hero aspect ratios to the Home/default hero ratio so detail hero images no longer clipped key content when opened from cards.
- Scaled detail title text, metadata text, and five-star assets with the rendered hero size to preserve Home-to-detail proportionality.
- Expanded Movies, Shows, Favorites, and Settings top title banners by 20 percent in portrait to compensate for native tablet toolbar/status icons overlapping the top banner area.
- Vertically centered nested mode navs in relation to nested genre navs on Movies and Shows screens.

- Preserved home, destination, catalog route, selected genre, mode, signed-in profile, and other navigation state across rotation so the user is not kicked back to sign-in.
- Auto-fit nested list-mode title, synopsis, runtime, genre, director, and producer strings so right-hand info boxes no longer clipped text, while vertically centering image cards against taller info stacks.
- Removed the Settings portrait bottom dead zone during downward scrolling, centered label names inside gray label boxes, resized/expanded language dropdown options, aligned the language/dropdown/avatar row, and scaled/reanchored the signed-in-as/avatar/sign-out stack against the Accessibility label box.

Work Completed - Sign-In Background, Intro Timing, and Rotation

- Studied the Frame 251 project thumbnail and determined a background-only extraction was realistic enough through image reconstruction rather than PSD layer access.
- Generated sign-in background mockups for the tested tablet aspect ratios, cleaned up experimental text boxes/crosses/circle artifacts, and removed an overly light pink anomaly from the purple-black background.
- Implemented standard-tablet-only sign-in background resources for portrait and landscape, centered behind the Cinerific logo placement for the Cinerific_Standard_Tablet dimensions.
- Replaced the intro animation's old red/burgundy background color with a sampled pink-purple value from the sign-in background, using black-to-purple naming and colors in both the native intro view and legacy Compose preview path.
- Tuned the intro timing so the screen holds pure black for 1000 ms, then fades black-to-purple over another 1000 ms.
- Dimmed the settled sign-in background image to 50 percent opacity and layered it over a true 100 percent black matte so the final static frame is black-backed rather than sitting over the purple gradient.
- Enabled full-sensor rotation in AndroidManifest.xml and MainActivity.kt, then corrected AVD-side rotation blockers by turning off ignoreOrientationRequest, enabling accelerometer_rotation, and putting user rotation into free mode.
- Verified emulator rotation across landscape, portrait, reverse landscape, and reverse portrait using forced rotation screenshots and adb emu rotate dimension checks.

Work Completed - Avatar Bubble Transparency Experiments

- Created a transparent Steve avatar experiment by removing the gray badge/background to alpha 0, then compared strict and outline-preserving masks on checkerboard previews.
- Revised the approach after user feedback so the circular bubble, rings, strokes, and drop shadows were preserved while only the square outside background was transparent.
- Hollowed the space between Steve's character outline and the circular bubble so only the circular gray outline remained, then generated thin, medium, and full gray ring variants for comparison.
- Implemented the selected full-ring transparent Steve test asset in the app and confirmed it on the sign-in screen.
- Restored the gray bubble fill as a 50 percent opacity test, then replaced the flat fill with a smooth gradient that stays 50 percent near the circular outline and fades toward 0 percent behind the avatar body.
- Reproduced the same hollow circular-bubble gradient treatment for Martin, Janny, and Guest, tuning Guest's silhouette detection separately because the character is gray-white rather than colorful.
- Added test drawable resources for Steve, Martin, Janny, and Guest using the 50-to-0 percent hollow bubble gradient, and wired CinerificIntroView.kt, CinerificApp.kt, profile avatar references, and legacy Compose intro helpers to the new resource set.
- Preserved the original avatar PNGs in the repo while leaving exploratory Steve test assets available for comparison during this design pass.

Validation and Checks Performed

- Ran ./read_project.sh before producing this artifact; it refreshed cinerific_PROJECT_SNAPSHOT.txt at the repository root with the current file tree, drawable resources, generated artifacts, and worklog inventory.
- Ran pdftotext and pdfinfo against every pre-existing Cinerific worklog PDF to verify prior title metadata, extractable text, footer convention, section order, letter-size geometry, and four-page daily-log cadence.
- Ran git status --short --branch, git log --oneline --decorate, git show --stat, git diff --stat, and git diff --name-status to verify the July 27 source scope from the July 25 worklog state through HEAD 0dedffc.
- Ran ./gradlew :app:assembleDebug during the final worklog pass; the current debug build completed successfully with BUILD SUCCESSFUL in 9 seconds.
- Installed debug APKs onto the connected emulator during the sign-in background, rotation, and avatar-bubble testing passes with adb install -r app/build/outputs/apk/debug/app-debug.apk.
- Relaunched com.prahlincinerific.MainActivity through adb force-stop and am start after installs so runtime screenshots reflected the freshly installed APK.
- Captured runtime screenshots for standard sign-in background behavior, forced portrait orientation, full-sensor rotation, Steve avatar transparency variants, 50 percent bubble fill, gradient bubble

fill, and the final all-avatar gradient-bubble sign-in state.

- Checked emulator rotation settings with adb shell settings, dumpsys window, cmd window get-ignore-orientation-request, and adb emu rotate while diagnosing why manual portrait/landscape rotation appeared stuck.
- Used local Pillow-based image scripts to generate, inspect, and compare avatar alpha masks and sign-in background assets without installing a new external PDF dependency.

Files Touched During July 27

- app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt: rating interaction, stateful star display, rounded/star-stroke drawing, duplicate filtering, catalog initial genre/mode support, detail hero scaling, portrait title-banner sizing, list-mode text fitting, nested nav alignment, and Settings layout refinements.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt: Home genre label and chevron routing, carousel-majority Movies/Shows destination choice, portrait Home sizing, and detail/home hero proportion support.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt: signed-in/navigation state preservation across rotation, profile avatar resource references, intro timing/color preview path, catalog route state, and settings/profile layout state support.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt: purple intro timing, standard-tablet background selection, black matte/50 percent settled background layering, rotation-safe sizing, and direct use of the new gradient-bubble avatar assets.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificLoadingSpinner.kt: independent clockwise spinner-layer speed ratios for red star, white wheel, and yellow inner star.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificViewportModeNav.kt and CinerificViewportNavBar.kt: selected compact/list glyph spacing, horizontal compression, and nested mode navigation alignment.
- app/src/main/java/com/prahlin/cinerific/ui/CinerificRightSideNavBar.kt: portrait always-visible bottom navigation behavior and state-safe nav presentation.
- app/src/main/AndroidManifest.xml and app/src/main/java/com/prahlin/cinerific/MainActivity.kt: full-sensor orientation support for all four app rotations.
- app/src/main/res/drawable-nodpi/signin_background_standard_landscape.png and signin_background_standard_portrait.png: standard tablet sign-in background resources.
- app/src/main/res/drawable-nodpi/*_avatar_bubble_edge50_body0_test.png plus Steve bubble comparison assets: generated avatar resources used for the hollow gradient bubble treatment.
- cinerific_PROJECT_SNAPSHOT.txt and cinerific_worklog_july 27.pdf: refreshed/generated project-management artifacts during this worklog pass.

Follow-Up Context

- The active avatar resources still carry _test suffixes, matching the experimental nature of the user-approved visual pass. A future cleanup should either promote the accepted files to final names or remove unused intermediary Steve test assets.
- The AVD rotation blocker was partly emulator policy, not only app code: ignoreOrientationRequest must remain false and user rotation should remain free when visually testing rotation from the toolbar.
- The standard sign-in backgrounds are currently scoped to the 2560 by 1600 / 1600 by 2560 standard tablet dimensions. Small/wide and large/narrow variants remain a future asset-expansion step if the sign-in screen needs exact-background support there too.
- The 50-to-0 percent avatar bubble gradient is rasterized into generated PNG resources. If the avatar style changes again, regenerating the masks from the original avatars is safer than manually editing the current derived PNGs.
- Portrait bottom navigation and rotation-state preservation are now important app contracts. Future navigation changes should preserve signed-in state, current destination, catalog route, selected genre, selected mode, active hero/detail, and Settings control state across configuration changes.
- Generated screenshots, PDFs, and snapshots remain project-management artifacts unless explicitly committed. The accepted July 27 source state is on main through HEAD 0dedffc, while this PDF records the daily worklog state after the latest snapshot refresh.

Output Artifact

- Filename: cinerific_worklog_july 27.pdf
- Created at the repository root in /Users/prahlin/gh/cinerific.
- Follows the Cinerific filename convention established by cinerific_worklog_july 12.pdf and continued by the July 14, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, and July 25 artifacts, including the space before the day number.
- Follows the established Alla Vostra/Prahlín/Cinerific daily worklog structure while keeping the body content specific to Cinerific work completed on Monday, July 27, 2026.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: cinerific_worklog_july 27.pdf.
