

Cinerific Android App Work Log - July 19, 2026

Compiled summary for Sunday, July 19, 2026 - focus: continuing the post-July 18 Cinerific prototype pass by aligning Movies and Shows mode screens, preserving the empty Favorites prototype state, refining the Settings language and toggle controls, adding rounded Settings section backgrounds, validating the final states on the Cinerific tablet AVD, and generating the daily Cinerific worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12, July 14, July 15 Part 1, July 15, July 16, and July 18: compact opening summary, source-material review, baseline state, goal list, work-completed sections, validation, files touched, follow-up context, and output-artifact close. This artifact records the July 19 source state now present on main and follows the prior root-level PDF naming, four-page letter layout, footer, and plain-text-readable style.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: cinerific_worklog_july 12.pdf, cinerific_worklog_july 14.pdf, cinerific_worklog_july 15 part 1.pdf, cinerific_worklog_july 15.pdf, cinerific_worklog_july 16.pdf, and cinerific_worklog_july 18.pdf.
- Used pdftotext output from the prior PDFs to preserve the established title pattern, opening-summary rhythm, source review, baseline/goals, themed work-completed sections, validation language, files-touched list, follow-up close, footer convention, and four-page daily-log shape.
- Reviewed read_project.sh and cinerific_PROJECT_SNAPSHOT.txt for project structure, scanner conventions, naming expectations, generated snapshot behavior, and the historical Cinerific context used to onboard into the codebase.
- Reviewed the current Git state on main tracking origin/main, including the post-July-18 PDF commit 2398ee9 and the two July 19 commits: 2e89ca5 and b3a1c45.
- Reviewed git show --stat and commit bodies for the July 19 work so the log describes committed source changes rather than only the conversation history.
- Reviewed app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt after the final Settings pass, with attention to catalog mode headers, Favorites placeholders, Settings section panels, shared control constants, animated toggles, and the language dropdown.
- Reviewed the Figma-driven visual references supplied during the day for Favorites, Movies/Shows mode-nav alignment, and Settings controls, including the language dropdown, toggle sizing, downward-only popup behavior, and rounded Settings section header boxes.
- Used Gradle build output, adb install/launch checks, AVD screenshots, UI hierarchy inspection, Git status/log output, and PDF text extraction as validation material. No external PDF package was installed for this worklog.

Baseline Status Before July 19 Work

- Cinerific entered July 19 with the July 18 Figma-style destination chrome, top rails, right-side nav behavior, interactive viewport nav, componentized genre/mode controls, Figma-like list mode, and small-collage center mode already committed and documented.
- Movies and Shows could filter by genre and switch between CollageLarge, CollageSmall, and List, but the center and right mode screens still needed their section headers to match the left mode: genre label plus Movies or Shows above the title cards.
- The vertical start position for catalog title cards and poster rows needed to be identical across all genre-by-mode combinations so the eighteen possible Movies/Shows screen states felt coordinated.
- Favorites had briefly shown real Movies/Shows content, but the Figma prototype required empty placeholder cards until a future add/remove-favorite feature actively populates the screen.
- Settings already existed as a reachable destination with the Figma black/purple chrome and a vertical list of rows, but the controls were still moving from placeholder pills toward the actionable Figma behavior.
- The language control had to stop acting like a simple tap-to-cycle switch and instead become a button-sized dropdown that opens a menu, supports English, Spanish, and Mandarin, and closes after selecting an option.
- The Settings toggles needed to match the closed language button size and shape while preserving the animated knob movement and visual feedback requested from the prototype.
- The Settings page also lacked the rounded dark background boxes and header pills that delineate Accessibility, Playback, Billing & Payment, and Security in the Figma design.

Main Goals for July 19

- Make Movies and Shows small-collage and list modes inherit the same genre-plus-screen section header treatment as the left-side large-collage mode.

- Keep title cards and poster rows aligned to a shared vertical top position across all Movies/Shows genre and mode combinations.
- Restore the Favorites screen to the prototype-accurate empty placeholder state until future user-driven favorite-add logic exists.
- Replace the Settings language control with an actionable dropdown menu whose initial closed frame matches the other toggle-sized controls.
- Support English, Spanish, and Mandarin in the language menu without clipping text or shifting rows below the language stack while the menu is open.
- Tune the language popup to open only downward, animate faster and smoother, and keep breathing room between the open menu and the Simplify UI row consistent with toggle spacing.
- Scale, center, and reshape all Settings toggles to match the language button original state while retaining the Figma-style animated switch motion.
- Add rounded section background boxes and Figma-like header pills around Settings sections without breaking scrolling or the open language overlay.
- Build, install, relaunch, screenshot-check, commit, and document the accepted July 19 source state.

Work Completed - Catalog and Favorites Alignment

- Created commit 2e89ca5, Aligned viewport mode sections across catalog screens, as the first July 19 source checkpoint after the July 18 worklog artifact.
- Updated the Movies and Shows center mode so CollageSmall carries the same section title treatment as CollageLarge, including the selected genre label and destination name above the small title cards.
- Updated the Movies and Shows List mode so the rich poster rows also sit under the same genre-plus-Movies or genre-plus-Shows header used by the collage modes.
- Shared the same section top padding across large collage, small collage, and list views so switching the right-side mode-nav buttons does not vertically jump the first visible cards or rows.
- Kept the title-card and poster starts consistent across the full catalog matrix: visible genre families multiplied by the three mode-nav buttons for Movies and Shows.
- Changed Favorites away from populated catalog content and back to empty dark placeholder cards under Movies and Shows, matching the prototype expectation that favorites stay blank until a user actively adds saved items.
- Kept Favorites summary headers in place below the empty sections so the screen still reflects the prototype structure without implying saved content exists.
- Preserved the July 18 interactive viewport nav component split while tightening only the presentation and vertical alignment inside CinerificDestinationScreen.kt.

Work Completed - Settings Language Menu

- Converted the language row from a tap-to-toggle control into a standalone dropdown-style component, SettingsLanguageDropdown, with local selected-language state and menu-open state.
- Added the three requested language choices: English, Spanish, and Mandarin, stored in SettingsLanguageOptions and rendered as selectable menu rows.
- Matched the closed language button to the toggle-sized Settings control frame, using shared width, height, radius, border, and shadow constants instead of a separate oversized Figma button shape.
- Increased the language text and triangular arrow by 20 percent from the earlier pass, then adjusted horizontal padding so English, Spanish, and Mandarin fit cleanly inside the closed button frame.
- Changed the language interaction so tapping the closed button opens the menu and tapping a menu row selects the language, collapses the menu, and leaves the chosen value visible in the closed state.
- Reworked the menu animation around animateDpAsState, FastOutSlowInEasing, and a 120 ms timing constant so open and close run about twice as fast while staying smooth.
- Kept menuVisible and menuExpanded separate so the dropdown can animate closed before it is removed, avoiding a snap disappearance after selecting a language.
- Constrained the popup behavior to open downward only, then reserved additional row spacing after the Language stack so Simplify UI and the following controls do not move when the menu opens.
- Adjusted the language menu row placement and radio-circle indicators so the open overlay reads as a compact menu rather than a second toggle state.

Work Completed - Settings Toggle Controls

- Rebuilt the Settings toggle visuals around SettingsAnimatedToggle with rememberSaveable state per row label, making each toggle independently actionable in the current UI pass.
- Preserved the Figma-style animated switch behavior with spring-driven knob offset and knob-size animation, plus animated knob color changes between unchecked and checked states.
- Scaled the toggle sizing down through the requested refinements and ended with shared constants matching the language button closed-state frame: 150 by 75 Figma pixels, 50 px radius, 2 px border,

and compact shadow.

- Matched all toggle tracks to the language button original shape rather than keeping a separate pill size, improving consistency across Language, Simplify UI, Dark mode, Playback, Billing, and Security rows.
- Kept the toggle controls vertically centered against each left-hand label/detail stack, so the interaction target aligns visually with the row text rather than drifting toward the section top or bottom.
- Maintained no-ripple custom interaction behavior with a switch role, preserving touch action while keeping the prototype visual style clean.
- Kept the dark track, black outline, radial-gradient knob, and subtle shadow treatment in a shared visual language with the language dropdown frame.

Work Completed - Settings Section Panels

- Created commit b3a1c45 as the final July 19 source checkpoint, adding rounded background panels for each Settings section and preserving the refined language/toggle behavior inside that new layout.
- Added reusable SettingsSection and SettingsSectionHeader composables so Accessibility, Playback, Billing & Payment, and Security share one section container pattern.
- Inserted rounded, low-opacity dark section backgrounds with a subtle border to delineate each Settings group against the black/purple destination backdrop.
- Added Figma-style rounded gray header pills for section titles, with black-weight typography and horizontal padding that lets shorter and longer headings read as designed labels.
- Inset section body rows from the panel edge so labels, descriptions, language controls, and toggles sit cleanly inside the rounded containers instead of floating on the page background.
- Kept the special extra top padding after the Language row based on the dropdown menu height minus the closed control height, giving the downward-only menu dedicated breathing room.
- Preserved vertical scrolling and system navigation-bar padding for the lower Settings sections after the rounded panels were added.
- Kept the destination top rail and right-rail chrome untouched during this pass so Settings polish did not regress the broader July 18 navigation work.

Validation and Checks Performed

- Ran ./gradlew :app:assembleDebug during the July 19 implementation passes; the debug build completed successfully after the catalog/Favorites changes and after the Settings control/panel refinements.
- Installed the generated debug APK on emulator-5554 with adb install -r and relaunched com.prahlincinerific/.MainActivity for visual verification on the Cinerific tablet AVD.
- Navigated through the profile selection flow, opened the right-side rail, and verified Movies and Shows mode-nav states in the running app after the catalog header and vertical-alignment pass.
- Captured and reviewed AVD screenshots for Movies and Shows mode screens to confirm section headers and first-card vertical positions matched across large collage, small collage, and list modes.
- Checked Favorites on the AVD and confirmed the screen shows empty placeholder cards for Movies and Shows rather than real saved content before favorites functionality exists.
- Used UI hierarchy inspection after a coordinate mismatch to recalibrate the Settings nav tap, then verified the final Settings closed state and the language-menu-open state on emulator screenshots.
- Confirmed the language dropdown opens downward only, leaves rows below it stable, provides English/Spanish/Mandarin choices, and collapses after a row selection.
- Confirmed rounded Settings section panels, header pills, shared control sizing, and centered toggle alignment were visible in the final AVD captures.
- Ran git status --short --branch before this artifact pass and confirmed main was clean and aligned with origin/main at HEAD b3a1c45.
- Ran git diff --stat 2398ee9..HEAD and confirmed the July 19 source delta is scoped to CinerificDestinationScreen.kt: 630 insertions and 95 deletions across the two source commits.

Files Touched During July 19

- app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt: updated catalog section headers and mode alignment, restored Favorites placeholders, added Settings section containers, animated toggle behavior, language dropdown logic, language-menu placement, shared Settings control constants, and section header pills.
- cinerific_worklog_july 19.pdf: this generated daily worklog artifact at the repository root.
- No additional source, drawable, video, Gradle, or workspace files were changed as part of the July 19 source delta after the July 18 worklog commit.
- The Git branch was clean before this PDF was generated; the only new local artifact from this request is the daily worklog PDF itself, subject to the project ignore policy for generated worklogs.

Follow-Up Context

- Favorites now intentionally shows empty placeholders, so the next functional pass can add real favorite add/remove state without fighting seeded placeholder content.
- The Movies and Shows genre-by-mode matrix now has stable header and card starts, but future deep-linking may still require route/state models if each genre and mode combination becomes separately addressable.
- Settings toggles are actionable locally and visually animated, but they are not yet connected to persisted app settings, playback behavior, billing preferences, or security flows.
- The language selector now exposes English, Spanish, and Mandarin in the UI, but full localization strings and app-wide language switching remain future work.
- The Settings section boxes approximate the Figma prototype and have been AVD-checked on the current tablet profile; additional tablet aspect ratios may need small spacing revisions later.
- If the Settings page grows, the shared section/control constants added today should make future spacing and control-shape tuning less fragile.
- The next worklog should continue from HEAD b3a1c45 unless new source commits are added before the next session.

Output Artifact

- Filename: cinerific_worklog_july 19.pdf
- Created at the repository root in /Users/prahlin/gh/cinerific.
- Follows the Cinerific filename convention established by cinerific_worklog_july 12.pdf and continued by the July 14, July 15, July 16, and July 18 artifacts, including the space before the day number.
- Follows the established Alla Vostra/Prahlín/Cinerific daily worklog structure while keeping the body content specific to Cinerific work completed on Sunday, July 19, 2026.
- No external PDF dependency was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior Cinerific worklogs.
- Created this daily worklog PDF: cinerific_worklog_july 19.pdf.
