

Cinerific Android App Work Log - September 24, 2026 (U.S. EST)

Compiled summary for Thursday, September 24, 2026 (U.S. Eastern Time) - focus: continuing the post-September-23 portrait presentation pass by reviewing the current project snapshot and every prior Cinerific worklog, making the portrait bottom navigation respond directly to vertical scroll, keeping navigation available when a destination cannot scroll, expanding the Home reel through the newly available viewport, standardizing Movies and Shows card proportions and horizontal browsing, rebuilding their portrait genre and view controls, enlarging detailed-list content with symmetric margins, matching Home detail-library cards to reel-state cards, validating the same APK on the USB Samsung phone and Standard tablet emulator, committing the completed source work as 3188bd3, refreshing the project snapshot, and generating this latest Cinerific PDF worklog artifact.

Generated in continuity with the established Cinerific worklog cadence from July 12 through September 23: compact opening summary, source-material review, baseline state, goals, themed work-completed sections, validation, files touched, follow-up context, and output-artifact close.

No September 24 Part 1 PDF existed in the repository, so this artifact follows the first-log-of-the-day no-part filename convention. Eastern Time was verified from the host as Thursday, September 24, 2026 at 8:31 PM EDT, UTC-04:00. The title retains the historical U.S. EST label while the body records the seasonally accurate EDT verification. This artifact records main through HEAD 3188bd3, Improved portrait navigation and catalog presentation.

Source Materials Reviewed

- Reviewed every pre-existing Cinerific worklog PDF at the repository root: July 12, July 14, July 15 Part 1, July 15, July 16, July 18, July 19, July 20, July 22, July 23, July 24, July 25, July 27, July 28 Part 1, July 28 Part 2, July 29, August 1, August 3, August 4, August 5, September 19, September 21, September 21 Part 2, and September 23.
- Converted all prior PDFs with pdftotext and compared title cadence, opening-summary density, baseline and goals sections, themed completion sections, validation language, file inventories, follow-up notes, output-artifact wording, and same-day part naming.
- Ran pdftotext across the worklog set to preserve the four-page U.S. Letter geometry, Helvetica typography, PDF 1.4 compatibility, extractable text, Codex metadata, and right-aligned footers.
- Reviewed cinerific_PROJECT_SNAPSHOT.txt, read_project.sh output, repository status, commit history, commit 3188bd3, and the complete source diff since the September 23 worklog.
- Reviewed CinerificApp.kt, CinerificHomeScreen.kt, CinerificDestinationScreen.kt, CinerificRightSideNavBar.kt, CinerificViewportGenreNav.kt, CinerificViewportNavBar.kt, and the new CinerificContentSizeing.kt shared sizing helper.
- Reviewed runtime evidence from Samsung SM-G990U R5CRC33MGNZ and emulator-5554, including builds, streamed installs, launches, portrait screenshots, scrolling, mode changes, and card geometry.

Baseline Status Before September 24 Work

- The September 23 pass had established responsive portrait navigation sizing, high-resolution nav artwork, bidirectional Home reel swiping, synchronized reel titles, full-screen portrait video, subject-aware cropping, proportional Home cards, and protected destination headers.
- The portrait bottom navigation remained visible at the top of primary destinations and occupied viewport height even before a user began scrolling.
- Home reel sizing still reserved space for that always-visible bottom bar, preventing playback from filling the complete visible portrait screen.
- Movies and Shows still used smaller large-view cards and a vertically chunked layout rather than the Home screen's larger horizontal carousel behavior.
- Their genre and view control groups remained horizontally arranged and undersized in portrait, with tablet genre abbreviations carrying excessive internal padding.
- Detailed-list cards retained a 50-unit left inset and 150-unit right inset, producing an asymmetric selection outline and under-scaled image, text, metadata, and rating content.
- Program-detail library rows opened from Home used a separate 80-percent card scale and therefore did not match the card size visible beneath an actively playing Home reel.

Cinerific Android App Work Log - September 24, 2026 (U.S. EST)

Main Goals for September 24

- Hide the portrait bottom navigation at the top of Home and the four primary destination screens, reveal it in direct proportion to downward content travel, and hide it with upward travel.
- Keep the bottom navigation fixed and immediately usable whenever a destination lacks enough content to scroll.
- Let Home video reels occupy the complete visible portrait viewport while preserving the approved logo-to-top and title-to-bottom relationships.
- Bring Movies and Shows large-view genre cards to the Home screen's proportions and horizontal, bidirectional carousel interaction.
- Recompose the Movies and Shows portrait genre/view controls as a larger vertical stack with equal visual widths, correct right alignment, and readable phone/tablet genre abbreviations.
- Scale the rightmost detailed View mode as one responsive card system until its blinking outline has equal left and right margins on phones and tablets.
- Make program-detail library cards reached from Home match the normal Home reel-state cards.
- Preserve landscape layouts and avoid extending portrait-only behavior into detail destinations or unrelated screens.

Work Completed - Scroll-Linked Portrait Navigation

- Added a nested-scroll connection at the main experience level for Home, Movies, Shows, Favorites, and Settings in portrait orientation.
- Tracked each primary destination's vertical scrollability and measured the rendered bottom-nav height so navigation translation is based on actual consumed scroll distance.
- Initialized the bar fully below the viewport at the top of scrollable portrait destinations.
- Applied a responsive hidden fraction to the bottom navigation's vertical translation, producing a continuous slide up during downward browsing and a continuous slide down during upward browsing.
- Increased scroll response so navigation appears promptly when Home reel content begins moving and reverses promptly when the user returns toward the top.
- Reported scrollability from Home, Movies, Shows, Favorites, and Settings through one shared app-level callback.
- Kept the bar fully visible and fixed when the current screen cannot scroll, ensuring navigation remains available with sparse genre results, favorites, or settings content.
- Limited the behavior to the five requested primary destinations; program-detail screens retained their existing navigation treatment.

Work Completed - Home Reel and Card Consistency

- Removed the portrait bottom-nav height reservation from the experimental full-screen Home hero.
- Expanded the video reel to the complete visible screen above the Android navigation inset without allowing it to exceed the visible portrait viewport.
- Preserved the existing phone logo top offset, portrait logo scale, title artwork scale, and lower title anchoring while the hero gained height.
- Kept reel swiping, requested-versus-settled playback state, subject-aware focal transforms, and genre-row vertical access unchanged.
- Extracted the accepted title-card-to-genre-header relationship into CinerificContentSizeing.kt so Home and destination surfaces can share one responsive large-card rule.
- Reused the shared portrait large-card width in program-detail library rows opened from Home.
- Removed the detail-state 80-percent portrait card reduction while retaining its established landscape calculation.
- Verified that Action, Drama, Documentary, Horror, and other detail-library rows now display the same logical card width as Crime, Thriller, and other rows beneath a playing Home reel.

Work Completed - Movies and Shows Large View

- Replaced the Movies and Shows large-view fixed vertical card grid with the shared circular horizontal carousel used by Home.
- Enabled bidirectional fling/swipe browsing for each genre row while preserving repeated carousel continuity and existing card tap behavior.
- Applied the shared Home card-width rule to Movies and Shows, keeping genre header text at its established size while enlarging the associated cards on both portrait form factors.
- Matched portrait card spacing to Home and retained the established landscape spacing.
- Kept the changes on the leftmost large-card View mode; the center compact mode and rightmost detailed mode retained their distinct purposes and interaction patterns.
- Preserved Movies and Shows filtering, route initialization, section headings, program data, and detail navigation while changing presentation geometry.

Cinerific Android App Work Log - September 24, 2026 (U.S. EST)

Work Completed - Portrait Genre and View Controls

- Added a portrait-specific composition for the Movies and Shows viewport controls while leaving the existing landscape Row implementation unchanged.
- Reoriented the genre selector above the view selector and retained their established inter-group distance.
- Doubled the initial control treatment, then scaled the genre group to the accepted size and enlarged the view group until both groups shared the same visual width.
- Used the view group's right edge as the horizontal anchor and maintained the protected gap below the destination top banner.
- Preserved the official Figma-style grid of All, ACT, COM, CRI, DOC, DRA, HOR, and THR controls instead of allowing compressed single-letter labels.
- Added an independent genre text scale so tablet abbreviations fill their button boxes with the same visual confidence as the phone version.
- Kept each genre and view button actionable, retained selected-state artwork, and preserved the existing mode and genre state model.

Work Completed - Detailed List Scaling

- Scoped the final sizing correction to portrait Movies and Shows when the rightmost detailed View button is active.
- Replaced the detailed card's asymmetric portrait end inset with the same inset used on the left.
- Derived a dedicated list scale from the newly available content width and the original list design reference instead of scaling from the entire 1194-unit frame.
- Enlarged each detailed card as one proportional unit, including title artwork, program title, year, synopsis, runtime, genre, director, producer, rating stars, internal gaps, and corner radii.
- Scaled the blinking selection outline and its clear/outer strokes with the same responsive factor.
- Achieved equal visible left and right outline margins on the 1080-pixel-wide Samsung phone and 800-pixel-wide tablet viewport.
- Preserved vertical snapping, selected-card detection, card-center measurement, program taps, and landscape list geometry.

Work Completed - Shared Sizing and Screen Boundaries

- Added CinerificContentSizeing.kt with a shared 36sp genre-header standard and portrait/landscape title-card ratios.
- Updated Home and destination genre headings to consume the same shared font-size constant.
- Kept the Home/default screen's accepted genre-name-to-card relationship as the source of truth for Movies, Shows, and portrait detail-library rows.
- Limited the stacked viewport controls to Movies and Shows because those are the only destinations exposing the genre/view selector.
- Limited the enlarged horizontal catalog cards to the leftmost large-card view and the symmetric detailed stack to the rightmost view.
- Preserved Favorites, Settings, program-detail presentation, and landscape behavior except where they intentionally participate in primary-screen scrollability reporting.

Work Completed - Device Deployment and Runtime QA

- Kept the Cinerific Standard tablet emulator available after recovering it from an earlier crash.
- Confirmed both emulator-5554 and USB Samsung SM-G990U R5CRC33MGNZ were online before deployment.
- Built one debug APK and installed the same artifact on the phone and tablet throughout the pass.
- Repeatedly relaunched the app, selected the Steve profile, exposed the Home bottom navigation by scrolling, entered Movies, changed view modes, and inspected final card and control geometry.
- Verified full-height Home video presentation and the nav bar's scroll-linked entry/exit behavior on both portrait targets.
- Verified no-scroll navigation fallback where content height did not exceed the viewport.
- Verified Movies and Shows shared the updated code paths rather than carrying device-specific or destination-specific duplicate sizing.
- Confirmed the persistent unrelated phone picture-in-picture overlay did not alter app layout measurements or the tablet comparison.

Cinerific Android App Work Log - September 24, 2026 (U.S. EST)

Validation and Checks Performed

- Ran `./gradlew :app:assembleDebug` after the completed source passes; the final build reported BUILD SUCCESSFUL with no Kotlin compilation errors.
- Ran `git diff --check` without whitespace errors before the commit and documentation pass.
- Installed `app/build/outputs/apk/debug/app-debug.apk` with `adb install -r` on both connected Android targets and confirmed successful streamed installs.
- Used `adb` launches, input taps, directional swipes, mode changes, and screenshots to exercise Home, Movies, the detailed list, and program-detail library rows.
- Visually checked the 1080 by 2340 Samsung phone and 800 by 1280 tablet emulator in portrait.
- Confirmed the selected detailed-list outline had equal left/right margins and that all internal content scaled proportionally without text overlap.
- Confirmed detail-library cards measured approximately 248dp wide on both form factors, matching the shared Home portrait sizing rule.
- Confirmed landscape branches remained on their prior calculations through explicit `isPortrait` conditions.
- Verified commit 3188bd3 contained 214 insertions and 46 deletions across the seven Kotlin source files plus the refreshed project snapshot.
- Verified U.S. Eastern Time directly with `TZ=America/New_York` before generating this artifact.
- Re-read all pre-existing PDFs and checked this output with `pdftinfo`, `pdffonts`, `pdftotext`, page rendering, and image inspection for four-page count, clipping, wrapping, metadata, and footers.

Files Touched During September 24

- `app/src/main/java/com/prahlin/cinerific/ui/CinerificApp.kt`: added primary-destination scrollability state, nested-scroll tracking, responsive nav hidden fraction, and bottom-bar height coordination.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificRightSideNavBar.kt`: measured portrait bar height and translated the bottom navigation from the app-level scroll fraction.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificHomeScreen.kt`: reported scrollability, expanded portrait reel height, and adopted shared genre/card sizing constants.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificContentSizeing.kt`: added shared genre-header and responsive large-title-card sizing rules.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificDestinationScreen.kt`: reported destination scrollability, standardized large carousels, added symmetric detailed-list scaling, reused shared portrait card sizing in detail rows, and connected portrait viewport controls.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificViewportNavBar.kt`: added the portrait vertical genre/view composition and matched visual group widths.
- `app/src/main/java/com/prahlin/cinerific/ui/CinerificViewportGenreNav.kt`: added responsive genre abbreviation scaling for phone and tablet controls.
- `cinerific_PROJECT_SNAPSHOT.txt`: refreshed by commit 3188bd3 with the latest source state and September 24 timestamp.
- `cinerific_worklog_september 24.pdf`: added this first and latest Eastern-Time worklog for September 24 using the established no-part filename convention.

Follow-Up Context

- Portrait bottom navigation motion is driven by consumed vertical scroll and intentionally uses a two-times response multiplier. Future tuning should adjust that shared multiplier rather than add per-screen animation timings.
- A primary destination with no vertical overflow deliberately keeps navigation visible; this is a usability fallback, not a failure of the hidden-at-top behavior.
- The shared large-card helper now defines the accepted Home relationship. Future Movies, Shows, or Home detail-card changes should preserve that common source unless a mode is explicitly distinct.
- The center compact view remains available for later measurements and was not resized during this pass.
- The rightmost detailed view now owns a portrait-specific scale while landscape remains tied to the original design frame.
- Both the USB phone and tablet emulator were left with the committed debug APK installed.

Output Artifact

- Generated `cinerific_worklog_september 24.pdf` at the repository root using the first-log-of-the-day no-part filename convention.
- Preserved the established four-page U.S. Letter layout, Helvetica text, PDF 1.4 compatibility, Codex metadata, right-aligned page footers, and plain-text-readable structure.
- Used the verified September 24, 2026 U.S. Eastern date and documented the actual EDT offset while retaining the historical U.S. EST title label.
- Recorded main through 3188bd3 and the refreshed project snapshot; the artifact is ready for repository review and commit.
